President Wilson kissing pigs?

Christine Ernely
Staff

The signs posted around campus read, "Do you want to see Sean kiss a pig?"

If the University of Idaho Resident Hall Association delegation can raise $400 in change for their trip to the National Association of College and University Residence Halls (NACURH) leadership conference, in Blacksburg, Va., ASUI President Sean Wilson has promised to kiss a pig.

The UI delegation has been holding car washes every Saturday at the Moscow Stinker Station for the past two weeks, and they plan to hold two more. They also plan to hold two more. They will also be taking donations of spare change at several locations on campus.

"People will be able to put their pennies in there or whatever," Woo said.

What's up with the turtles?

International student policy may change

Compliance with federal regulations requiring insurance at issue

Russ Wright
Staff

The University of Idaho is hoping to enforce a policy more effectively by changing some rules regarding international students.

The Faculty Council voted on Tuesday to accept significant amendments and deletions to the Foxtail-Stuff Handbook regarding policies concerning international students and health insurance. The full faculty will vote on the issue May 9.

"We’re trying to get the university into compliance with federal regulations," said Michael Whitman, director of the International Program.

"This has no linkage to the suggestion to require all students to have health insurance," he said referring to a recent suggestion by an Idaho senator to require all students to have health insurance as a condition for enrollment.

"Our International and Naturalization Service does, however, require international students to carry health insurance for themselves and for dependents during their stay in the United States. Whitman said students coming to study in the United States are required to sign documents before leaving their country stating that they have met certain requirements in order to qualify for a visa.

One of these requirements is to carry a basic amount of health insurance. Some students, however, have been able to have their insurance for dependents, if any, have been taken care of. They will get the insurance for their dependents, and the university will also pay them to have insurance.

Insurance costs about $800 per year, said Whitman.

"It does not mean all students will have insurance, Whitman said. The new policy, if it is given final approval, will give UI the option of enrolling international students.

Turtle Derby raises $500 for local charity

Jennifer Eng
Staff

Turtles, turtles and more turtles. The University of Idaho not only celebrated several annual events last weekend—which included Family Weekend—but Phi Delta Theta and Phi Delta Theta Turtle Derby. The Turtle Derby was held last Saturday.

This annual event is the main philanthropy of Phi Delta Theta Fraternity and this year they raised $300 for Shoshone, a local charity.

The event was kicked off with the Phi Delta Theta turtle mascot being driven in on a 1995 Corvette donated by Wally Gwynn Motors, Inc. After the arrival of the mascot, the skills, prepared by local sororities, entertain the crowd. The skills were judged by Greek Advisor Linda Davis, her husband, Associate Director of University Residence Halls Susan Davis and the Phi Delta Theta Provincial President Ken Wykowski.

For the sixth year in a row the women of Alpha Phi won the old competition.

The sorority that raised the most money for the fraternity were the Delta Gammas. Money raised was raised by T-shirts sales in the sorority. Parents who came out to see the event were also encouraged to buy T-shirts.

Turtles were brought to each sorority earlier in the week to be trained and pumped up for the big race. A circle was drawn in the street and the first turtle to make it outside the circle won the event. The first turtle to make it across the line was the turtle trained by Delta Delta Delta sorority.

The very last event of the morning was the announcement of the new Phi Delta Theta Queen. Their new queen is Sarah Warren of Kappa Kappa Gamma sorority.

"We just wanted to thank everyone for making the event such a big success," said John Hoyne, president of Phi Delta Theta fraternity.

Hoyne and Steve Thompson

Contestants zoom along neck-and-neck during the Turtle Derby last Saturday during Family Weekend.

Online conference lets you talk with Clinton

President Clinton’s two week National Electronic Open meeting will be stopping at 300 sites— including the Palouse. The meeting will begin at 6 a.m. on Monday and end at 9 a.m. on May 14.

"Through this national open meeting, we are hoping to spark the discussion and vigorous debate on how government can improve delivery of services and benefits, and availability of information and increased citizen participation in our democratic process using information and communications technology," said Secretary of Commerce Ronald H. Brown.

The Palouse Region is planning to take part in the Palouse Data Forum along with over 300 organizations across the country. As part of the National Library Program, both the University of Idaho and Washington State University Libraries will provide public access sites for people who do not have e-mail accounts or access to a personal computer or the community network, First Step. Users will be able to use the public computer stations and unlimited access for $15/month. During the two week period, First Step will hold an open house to introduce the set-up fee.

During the meeting, people will have the opportunity to discuss topics with experts and other participants.

1. Service— From emergency health and health care to business licenses. 2. Benefits—from Social Security and food stamps, to small business grants. 3. Information— from declassified secrets to satelite technology. 4. Participatory democracy— ensuring everyone’s chance based on participation. 5. Technology— how the technical portion of electronic government will work.

Here’s how you can participate in the discussion starting Monday:

If participants have access to the World Wide Web (most USU and UI computer labs provide this access) they should tune in to: http://meeting fedworld.gov or http://meeting.edu.gov.

If participants don’t have a WWW browser, but have a Usenet news reader, selected newsgroups will include the opening statement from the topic host and comments from other participants. Comments can be submitted by posting to the newsgroups. Participating newsgroups are:

alt.gov.meeting.services
benefit-alt.meeting.services
information-alt.gov.meeting.
info
Participatory-alt.meeting.
pedido
palouse
Society-altegovt.meeting.
technical
Participation through E-mail is possible by sending a message to: join@meeting.fedworld.gov with the message subscribe (name of topic) in the body of the message.

Monday access is 1-800-779-3272.
Access sites will be located at:
University of Idaho Library, first floor, government documents reading room.

Take care of payroll before you leave

Before students leave campus for the summer, they should remember to make arrangements for their payroll checks.

If a student has direct deposit, they need to remember to leave their bank and credit union the first check for the summer term, so that they can still receive their check at the beginning of the fall term.

Attention international students who complete the application by May 1. For more information on the amounts of the scholarships or the application materials required see Captain Robert Strope in room B-42 in Memorial Gym or call 885-6286.

Coalate Forest Stewardship Day

The Palouse and UI Student Chapters of the Society of American Foresters and the UI Cooperative Extension System will co-sponsor a "Celebrate Forest Stewardship Day" tomorrow from 9 a.m. to 2 p.m. at the University Forest Experimental, Flat Creek Unit. The Flat Creek Unit is six miles south of Moscow on State Highway 99.

Take Highway 99 to the signs from Harvard or Deary. For more information call 885-6586.

Washington State University Library, LQuick Info Stations.
Washington State University College of Business and Engineering.
First step Research (contact Kevin Owen at 280-8869).

Want to save financial aid? Call this number

The United States Congress is repealing its own policies and the Senate and House will be starting the process of formulating a new one.

One budget proposal threatens to reduce financial aid for students by 1 percent over the next five years.

Some members of Congress have proposed cutting the Supplemental Educational Opportunity Grants and the Perkins Loan program.

Other members have suggested eliminating the interest exemption on loans while students are in school which could add an average of $750 to $4,500 in extra payments for students once they graduate.

However, students can call the Student Aid Hotline at 1-800-574-6879, or send a formal financial aid cut and then can record their opinion. The opinions will be sent to whichever member of Congress will have the most influence in the upcoming debate on financial aid.

Time is of the essence as the U.S. Senate has scheduled the vote on the 1995 federal budget today, and the House of Representatives will start its version in the second week of May. Call now and help influence the outcome, 1-800-574-4AlD.

Folk singers bringing show to UI

Walking’ John Stotof, a folk singer and book collector from Big Sky, Mont., will bring his multimedia show, Forever Wild to the UI campus Auditorium tonight at 7:30 p.m. Tickets are $3 for students or $5 for the public. Tickets may be purchased from the Student Union, Guitars, Bookpeople or The Combine in Pullman for $3. The event is sponsored by the Idaho Conservation League.

Millets escalate threat against agents

Months before the horrific Oklahoma City bombing, law enforcement officials in the Central and Western United States were on the target of an escalating series of threats and attacks by militants bound by a common hatred for government authority, records and interviews show.

A second violent incident reported, a man with militia ties was being sought for allegedly shooting a Missouri高速公路 patrolman last September to avert the arrest of a fellow anti-government activist.

After analyzing such seemingly unrelated incidents, federal authorities say they became convinced that they were facing a pattern of hostility toward government officials. Federal Intelligence reports warn that some local police belong to militia groups and have been directed to transmit information on possible raids by federal agents that have been intercepted by militia groups.

In the wake of the Oklahoma bombing on April 19, authorities are exploring links between certain militia members and federal bombing suspects.

Timothy J. McVeigh and two brothers charged with conspiring to make explosive devices. Officials also say they have intensified their efforts to monitor ties to government officials with a militia movement now thought to number more than 100,000 people spread through several hundred groups in 30 states.

Ruskans expel American journalist

MOSCOW—Two weeks before President Clinton is scheduled to visit Moscow for a meeting with President Boris Yeltsin, the Russian government expelled an American journalist and declared him persona non grata.

Steve LeVine, who reported on Russian military repression of breakaway Chechens for The Washington Post, Newsweek and the Financial Times of London, was detained at Moscow’s Vnukovo airport when he arrived Monday on the Georgian capital of Tbilisi. He was held under guard overnight and put on a flight back to Tbilisi this morning after his multiple-entry visa for Russia was confiscated.

Oleg Lebedev, a spokesman for the Russian Foreign Ministry, said Moscow had expelled LeVine under the terms of the 1961 agreement of the Commonwealth of Independent States (CIS). A group of 12 former Soviet republics dominated by Moscow. Suaid said Russia will not allow any CIS state to issue a visa to an individual who has been expelled from the territory of another member state. Lebedev said, "We informed the Russian republic of Uzbekistan last fall for reporting that dis- generated the American journalist.

Ebommore student’s economic report gains national attention

Last fall, Meredith Bagby, 20-year-old Harvard University sopho- more, turned in a term paper and earned her marks for an "A."—it gave her a birth into national prominence and a spot on the Star King Show.

Bagby’s project, "The First Annual Report of the United States of America," is a 70-page compilation of the nation’s economic and demographic statistics, ranging from things like the national debt to numbers on income level of citizens.

"I wanted to put a picture of the U.S. economy by showing some of the smaller facts that most people may be unaware of," she said. "If you look at what we’re doing, you can easily tell where we’re going wrong."

Bagby spent $2,500 to produce about 2,000 copies of the report and sold them for $15 a piece. Soon, requests for her report came from numerous reporters, politicians and public officials, including Sen. Sam Nunn and Rep. Charles Schumer.

P.erot used Bagby’s report when testifying before the Senate Finance Committee. He also introduced the sophomore to the nation on the King show.

Within days, Bagby struck a deal with HarperCollins, which will publish it. The company has already promised an inflationary $275,000 advance for the book.

Young parents can have fun with kids

Come to a special day for young parents to join together, under, at the UI Child Development Center. The NICC (formerly Home Economics Building) on Tuesday is the place to be. The cost is free. For more information call 885-8731. To register, call Rebecca Saxon at 885-6455.

Italy may be headed toward 2-party system

ROME—Italian voters, still observing the 30th anniversary of the collapse of fascism, voted yesterday to free their country of fascist dictator- ship, but not to end the party built around the historic dictator.

Pollsters assured Italians, that the center-right, which won new governments in 15 regions, 76 provinces and more than 5,000 municipalities, favored center- right parties and the ultra right, to lead liberal social democracy.

However, on Tuesday, final official returns indicated victory to an alliance of center-left parties built around the former Italian Communist Party.

One center-left- rightist appeared on a television news show with a toy pistol pointed to his head: "Exit Polls are like Italian politics," he sighed.

Parties representing the center- left and center-right each officially got around 41 percent of the vote, but the center-left won nine of 15 regional governments.

The Party of Democratic Left ran second in every national election since it was formed, this time with 24.6 percent. An ultra rightist, Beppe Grillo, who called Reformed Communists, finished third.

The right-wing National Alliance received 14.1 percent, a party built around the neo-fascist言论- dic- tator Benito Mussolini—killed by partisans 70 years ago this week.

Advertising students succeed in selling Neon to ad professionals

Shelby Beck

With an advertising campaign presentation their advisor labelled "technically weak," thirteen University of Idaho students placed first at the Northwest Professional Advertising Conference last week.

As a result, the group will travel to Tampa, Fla., to compete with 14 other regional winners in the National Professional Advertising Conference May 31-June 3.

"If you were to compare it to sports, we're in the Final Four," said UI Assistant Professor of Communication and Ad Competition Team adviser Mark Secret.

A total of eight District XI schools from Idaho, Wash., Mont., Oregon, and British Columbia, were judged last weekend by advertising professionals on their full-scope ad campaign presentations about the Dodge Neon car.

"This is real world stuff," said UI senior and Media Director Jennifer Croner. "It's fleshing an account to real clients."

At the conference, the group gave a 20-minute verbal presentation of their campaign and participated in a question and answer period. The 13 UI presentation campaign consisted of a 40-page full-color presentation book that accounted for 50 percent of their total score as well as four TV advertisements, one radio spot, and 10 print ads.

The print presentation was designed by Robert S. Selman, a marketing strategies executive from Chrysler Corporation; Michael Graham, the senior VP-Director Strategic Planning of BBDO, Stephen Rogers of BlackBerg-distance Sullivan Goodnight, Inc., and Sam Pond, associate creative director of Goodby, Silverstein & Partners.

"It's an image campaign. It wasn't a hard sell," said Croner. "We got away from that hard sell approach. It was definitely an image oriented campaign," she said.

Secret said District XI is one of the "most competitive in the nation." Two other schools that have won the district competition have gone on to take first place in the national competition. In 1988, the University of Oregon placed first in the national competition and the University of Montana, in 1992.

"We were overwhelmingly the winners," said Croner, who spoke with the judges after the competition was over. "They were really impressed with our creative approach. The only thing we can do now is practice, get it down solid," she said.

Secret said the competition has been reduced from more than 180 schools nationwide to 15 that will compete in Tampa Bay.

"So we're going back not just to go back, we're going back to win," he said.

Micron responds to letter from Wilson

Melica Johnson

ASUI President Sean Wilson wrote a letter to Steve Apelstein, Micron's Chairman of the Board and CEO, in the middle of March, to express his disappointment about Micron Technology's positions on the college's engineering program in Idaho.

On April 21, Wilson received a response from Kip A. Bedard, vice president of Investor Relations, in which Bedard defended the Micron corporation.

In Wilson's letter to Micron, he said that he understood "the importance of serving Idaho's business needs, but not at the expense of the primary customers of the Higher Education System in Idaho: THE STUDENTS!"

Wilson said that he could not see the benefits of a separate engineering college at Boise State University when the University of Idaho "is addressing this need most expeditiously, more efficiently and in a highly qualitative manner."

As a suggestion to Micron's probable concern about Jones, Wilson argued that Micron has access to all engineer students in Moscow, by bus or an hour flight or by telephone, as well as local students at the BSU co-op program.

Bedard responded to Wilson's comments by saying that Wilson failed to consider industry as a customer. "Unfortunately, your statement that "the students" are the only customers, neglects to consider that most students (maybe not all) pursue a degree to eventually enter a career," Bedard said, "which obviously means that their skills need to meet industry expectations."

Bedard asked Wilson a question in the letter concerning Idaho's low job placement rate, which he had heard was at approximately 60 percent. "When Idaho's high technology and related industries have thousands of job openings (a finding from the Engineering in Idaho Task Force), why is the placement so low?"

"Our existing 6,000 employees disagree with you that taking a one-hour flight for an acceptable arrangement," Bedard said, explaining how most are busy working during the day. "Hopping on a plane to attend an engineering class downtown seems to make much sense, sorry."

Bedard ended his letter by saying how the Micron corporations is consistently evaluating themselves and asking current customers to evaluate them. He said that they also ask those who are not customers why they do not conduct business with them. "Not to overstep my bounds, but perhaps one could apply this same process to engineering in Idaho," Bedard said.

Wilson was very pleased that Bedard responded to his letter. "I think this should open up a channel of communication to allow the University of Idaho for the first time to sit down with Micron," Wilson said, of how his next step will be to request that UI and Micron get together and discuss the engineering issue.

Wilson feels that the letter from Micron proves the engineering situation is not over. "If this guy took the time to write me back, this shows,' Hey, we're not done yet,'" Wilson said.

When Wilson sent his letter to Micron, he had also sent copies to eight newspapers. Some of these papers included: the Idaho State Journal, the Idaho Statesman, the Spokesman-Review and the Idaho State Journal.

Bedard responded by sending copies of his response letter to all of those Wilson had written and also to eleven other politicians and educators. Some of the others had sent letters to: Governor Phil Batt, the State Board of Education members, Jeffrey Klaus (ASB President, Boise State University), Senator Arwell Parry (Idaho Senate) and state Representative Mike Simpson (Speaker of the House).
Professor warns audience about effects of alcohol

Jennifer Eng

Alcohol and its detrimental effects on the brain was the topic of discussion in the Borah Theater Wednesday night. Terry Armstrong, a University of Idaho professor of Secondary Education, told the audience the dangers of alcohol to the brain.

The presentation was sponsored by Phi Delta Theta fraternity in an attempt to create awareness among the public about alcohol. The presentation was open to everybody and flyers were handed out to every Greek organization and residence halls.

Armstrong has taken a strong interest in the effect of drugs on the brain. During the presentation Armstrong said that the brain is the most seriously affected by the introduction of alcohol into the body.

One of the most prevalent problems that is touching America right now is the alarming rate of Fetal Alcohol Syndrome (FAS). Statistics now show that one in 200 babies born in the United States has FAS, he said.

The alarming side of this issue is the terrible effects that alcohol has on the developing fetal brain. Alcohol and other drugs can attack the brain and do more damage while it is still developing.

Armstrong said there are 32 abnormalities that can occur in a fetus whose mother drank alcohol or did other drugs during the first trimester of her pregnancy. Some of the abnormalities are retarde-

sional students who fail to comply with the insurance requirement.

"We're trying to be fair to those who are in compliance and the rest of those who use medical care," said Whitefan, "and we're not asking the international students to do anything new." The only change will be in the way the insurance requirement is enforced.

When some international students allow their insurance to lapse, the county, the hospital or individual doctors often have to pick up the tab for any medical emergencies. These costs are often passed on to other patients or taxpayers.

"We average about three to four incidents per semester," said Whitefan regarding the instances, where international students incur medical bills but have no insurance or have no money or extra income to pay for the bills. Whitefan said there will be an appeals process for those interna-

cional students who fall into violation of INS requirements. The proce-

To find out more information on the event, please contact the Faculty Council or the Department of Psychology.

INSURANCE

Again, students who do not comply with the insurance requirement will face serious consequences.

"They agree to the INS guidelines if they come over," said Whitefan. "We're not promising that something that should be enforced. Not carrying insurance is a breach of the INS regulation."

Insurance for international stu-

dents has to have coverage some-

what different from average health insurance.

One of the differences in insur-

ection provides for the costs for the repayment of medical student a student or a student's dependent die while in the United States.

WE LOVE YOU!
Japanese anime cartoons a hit on college campuses

Kevin Sweeney
College Press Service

Japanese animation used to be the best-kept secret on U.S. television. As kids, few of us had the slightest inkling of what our favorite cartoon characters-Speed Racer, Astro Boy-came from the very same country as Godzilla and Godzilla, Jr. Can you imagine Kimba the White Lion speaking Japanese? No way!

Today, Speed Racer is a cult favorite, and Kimba and Astro Boy live on as original television serials. Japanese anime (pronounced "ah-mai") has matured, and it's no longer the province of the after-school, TV-viewing crowd. For years anime was strictly the secret passion of cyberpunkas, Trekkies and other assorted sci-fi freaks. But the genre has broken out of midnight marginalization and caught on in a big way: Anime clubs are springing up on college campuses all over the country, and anime cassettes are jamming the new-release shelves of mainstream video stores.

The anime onslaught coloquies with the general entertainment throng of East Asian cinema in the West.

While the art-house crowd lines up for the provocative historical and contemporary dramas of China's Zhang "Raise the Red Lantern," Yimou, lip and (mostly) young filmmakers are eating up our Lang's cutting-edge action films and Japan's vibrant ad

the early 1960s that anime became an inseparable part of Japanese culture by merging with comic books, writes John Beban in the fall 1994 issue of the animation magazine "Animax."

The Japanese have long been fascinated by comics, which they call manga (the word translates, literally, as "irresponsible picture"). Manga itself is a $2 billion industry, and accounts for more than 50 percent of all printed materials sold in Japan, according to Beban. "For Japanese of all ages can't get enough of the comic sections in the newspaper," he says. "The genre is so varied that it includes at least uniquely East Asian," she says. "To really understand the joys and characters requires a knowledge of Asian religions and mythologies. Americans probably don't respond to anime in quite the same way as the Japanese since these films were designed for.

Of course, that doesn't mean the students' responses aren't valid.

she says. Sci-fi and fantasy buffs enjoy the colorful special effects, and Termination Overdrive on the cyberpunk action. Hell, even perennials like anime "leeds. Christian assumptions are not so much challenged as completely ignored," she says. "The anime universe is amniscia. Anything in it may get up and speak to you at any time."

Including hardware, Rockers are turning robots when they land, or they can sail through space as three-masted galleons with solar sails.

All this may be a revelation to the West, but the Japanese have been anime-players for the last 35 years or so. Animation has been around much longer than that of course (about 80 years). But it wasn't until the early 1960s that anime became an inseparable part of Japanese culture by merging with comic books, writes John Beban in the fall 1994 issue of the animation magazine "Animax."

Professor not only listens to complaints, she invites them

Marco Buscaglia
College Press Service
CULLOWHEE, N.C.—I’m sick of my roommates.

“I hate my classes.”

Sound familiar? If complaining about life is one of your biggest pastimes, Robin Kowalski may just want to meet you.

Kowalski, an assistant psycholo-
gy professor at Western Carolina
University, has been listening to people complain for almost two years. Not that Kowalski didn’t lend a sympathetic ear before then, it’s just that she didn’t take notes.

Kowalski is studying the how, why and what of people’s complaints. “We all have things in our life that make us miserable,” says Kowalski. “Even the small things can upset us, so the secret is to find out how to work out our problems without driving ourselves or every-
one around us insane. Complaints can play a huge role.”

The 36-year-old professor says that she first considered studying complaining when she was teaching at Wake Forest University in the summer of 1993. Kowalski says the idea was suggested to her when she was, well, complaining.

“I was telling a friend of mine how there were no good fields in psychology left to research, that there were already too many out there. He told me that since I was so good at it, I should study how and why people complain.”

The next day, Kowalski went to the library to look up material on the subject. “I found some stuff in consumer studies, but there was hardly anything else,” she says. “I figured this would be a good place to do my work.”

After arriving at Western Carolina, Kowalski set up a student test group to focus in on the great art of com-
plain.

Her first study asked a group of students to think of unhappy thoughts. Half the group was asked to write down any complaints concerning what they just thought about, while the other half wrote a brief summary of what they did the previous day. Both sides then answered questions about their feel-
ings.

“Complaining made the people in the first group feel much better,” says Kowalski. “They had a chance to vent their frustrations about whatever it was they were thinking about.”

Kowalski’s second study focused on what complainers expect out of people when they make complaints.

“Whether it’s a college complaining to his professor or someone at the office talking to his co-worker, com-

plainers want the other person to nod their head and agree. They don’t want them doing any defens-

ive.”

Unless someone is a chronic complainer, in which case he or she rarely feels better after sounding off, the person doing the complain-
ing usually avoids even mentioning that anger. People, says Kowalski, the person listening usu-

ally feels worse.

Kowalski says her research indicates that men and women com-
plain at the same rate, and that most college students shave the ability to not only carry on a conversation, but to do so on a reasonably interesting topic.

Of the roughly 500 students Kowalski has interviewed so far, however, had a slightly differ-
ent complaint. “She complained about having to complain,” he said.

Complaining made the people in the first group feel much better. They had a chance to vent their frustrations about whatever it was they were thinking about.

—Robin Kowalski
assistant psychology professor at Western Carolina University

ANIME • FROM PAGE 5

bit too long at two hours, combines traditional science fiction with a level of spirituality not often seen in American films, let alone car-
sic.

“Wings” cost about $8 million, and looks it; it was the most ex-

pensive anime up to that time. Three thousand animators reportedly worked on the beautifully drawn production, which was written and directed by then 26-year-old Hiroyuki Yamaga and scored by superstar composer Ryuichi Sakamoto, who would win an Oscar the following year for “The Last Emperor.”

Manga Entertainment also is co-

producing a new manga-based anime, “Ghost in the Machine,” which will be made in Japan by industry veterans. While Yamada says it will not be “Westernized,” he acknowledges that Manga Entertainment “recommended some script changes” to increase in accessibility to Westerners.

Levi, for one, wonders if the worldwide popularity of anime will lead to its
dilution. She points to another pop-

ular manga, “Dirty Pair,” which will be filmed simultaneously in American and Japanese versions. She also wonders how some of the mixed messages anime sends to Japanese viewers will go over stateside.

She’s especially interested in the U.S. reception to an enormously popular kids’ TV series called “Sailor Moon.” “It’s been a huge hit in Japan with pre-teen girls and dirty old men,” she says dryly. The ongoing plot concerns a group of high school girls who are given the power to change into super-
heroes—when they put on magic makeup. The transformation includes their schoolgirl uniforms, which become noticeably skimpy.

“It’s a fascinating mixed mes-

sage,” Levi says. “The girls become empowered and strong,

er than boys, even their teachers. But they do so only by wearing makeup. Now that’s a weird theme.”

Bedheads release debut CD, Therapy

Matt Baldwin

A wonderful bright and sunny day in the beautiful town of Moscow brought me to the meeting of The Bedheads at Mikey's Gyms. Clustered around a small table I was able to speak with Douglass Cameron, guitarist; Rick Cavalieri, vocals and keyboardist; Michael Monscheck, bass and vocals; and Bill Schwarz, drummer.

The Bedheads are one of the primary focal points in the Moscow - Pullman area bringing a unique style and flavor to the Palouse. They began in the June of '93. "Doug and I (Mike Monscheck) were working and trying around with the idea of putting a band together. Rick and I were writing songs for a long time. It started off as kind of something to do during the summer. We just wanted to get together. Spend some time writing music and jamming," Monscheck said.

They found that their music was a good outlet for themselves while they played strictly in the Moscow - Pullman area. Monscheck and Schwarz attend the University of Idaho. "Rick and I are the workers," says Cameron.

"We all went to high school together as a threesome. And then John Frielle introduced us to Bill because we were asking for a drummer. So Bill finally got it all together and had a jam session one day and we laughed our asses off," Cameron said about the beginning of the band.

"We were going to be Jerry Mathers. We were throwing around names and ended up with the Bedheads," Cavalieri said. "Mike and I were working at the Butcher with my brother at the time. There was a guy out there who just never combed his hair when he came to work so everybody called him bedhead. And then he walked by one day when we were looking for a name and my brother said hey you should call yourself the bedheads. And that is where it all started," Cameron said.

Their music is not very serious, it is more of a fun loving style than anything else. "There are many aspects of the emotional palette," Cavalieri said.

Their music, if human, would be a schizophrenic. "He is the type of guy who couldn't decide what type of mood he was in," Steward said.

"Big Time Adam got us started," Monscheck said. Now after getting started by Big Time Adam they have now accelerated to playing all around the Palouse and they are planning on sometime going down to Boise and other areas to perform.

Their latest venture has been the production of the album Therapy which will be officially released tonight at their CD release party at the Moscow Community Center located on the corner of 3rd and Washington in downtown Moscow.

Everyone is invited to the party which will include a special guest performance by Circle of Knots. There will be pizza, first come first serve, and the doors open at 9pm. The admission to the show is free.

Gorman to present alternative view on women

Jeffrey Albertson

For over a decade now singer-songwriter Judy Gorman has made an attempt to revolutionize the way the world views women in music.

Gorman has been performing her original brand of folk music for the past 12 years, and will be appearing tonight at the Vandal Cafe as the final installment of AEUI Productions' Coffeehouse series. The show starts at 8 p.m. and is free and open to the public.

In conjunction Gorman will also be going on a free workshop/lecture on the History of Women and Music at the Lionel Hampton School of Music Recital Hall 11:30 am. today.

Originally from New York Gorman has released three full length albums as well as a fourth self-titled EP and has toured all over the United States and Europe.

"Women get to be Eve or Mary in pop music," Gorman said. "Eve is powerful and sexual, but is characterized as a predatory monster, while Mary is seen as nurturing, but boring and powerless."

Through her music and teachings Gorman has tried to offer audiences aspects of both, providing a less stilted image of women.

Gorman points to popular songs to back up her statements. "There is woman as sexual and evil. So you get Wicky Woman, Full Woman and Maneater. Then you have the woman as sweet and good, but fairly weak, as in You're My Baby and Shandy Your Man," Gorman said.

In her workshop Gorman will present aspects of Women and Music throughout history from ancient civilizations to the present. Songs of by, about and against women and will also present a wealth of songs from all ages written from an authentic, alternative, woman's point of view.

Gorman's vast career has taken her not only to venues throughout the United States and Europe but to clubs, as well as appearances at the African National Congress Concerts, the Chicago Folk Festival and several performances on National Public Radio.

She has also been heralded by critics and peers including the Boston Globe, MS Magazine and Pete Seeger.

"I think of all my songs as love songs," Gorman said. "It's the gift and challenge of being alive to be the need to connect with myself and others. It's a privilege and an honor to do this work."
Lee captivates audience with reading

Poet and non-fiction author reads at UI law building

Matt Baldwin
Staff

The University of Idaho’s law building’s courtroom was filled to capacity Wednesday evening as the crowd’s faces ran from mute silence to hushed whispering as Li-Young Lee read from his books.

Lee is a poet as well as a non-fiction author. Born in Indonesia, Lee came to America as a boy.

“Writing is a form of love. A sentence is a shape of love. A paragraph another shape. A line in poetry is a shape of love,” Lee said. Lee expounded on his idea of love by reading from his book. Within the passage he read he spoke of his father. The reading was a profound experience to the listener. Lee is definitely a master of the art of poetry.

Lee is able to combine his words in such a way it moves a person to imagine his life through his eyes. At his reading, he was the listener’s guide through the image-intense life that revolved around his experiences and thoughts.

“I have always written (poetry),” Lee said. Lee is also a graduate from the University of Pittsburgh, majoring in English and Bio-Chemistry.

“My ambition at the time was to go to medical school. That was my parents ambition. Instead my brother who was a year ahead of me, he graduated and said he would wait for me and we would go to medical school together. When I got out he said we were going to go and open a restaurant. So we went and opened a hot dog stand in South Philadelphia. We cooked hot dogs and chicken wings. It was after that I spent two years in graduate school,” Lee said. Lee admitted he was lucky as a poet. He never had an ambition to publish but a friend of his happened to go some of his work to a publisher and his career went from there.

Lee is also a guest professor at UI.

In a flawless delivery, Li-Young Lee shares prose poetry from his new book, “The Winged Seed.”

Garth Fagan Dance Company visits Palouse tonight

Amy Ridenour
Lifestyle editor

Strong imagery, fresh textures, and originality characterize the Garth Fagan Dance Company performance at Beasley Coliseum tonight.

The performance is a multi-cultural collaboration effort between world famous choreographer, Garth Fagan, jazz pianist-composer, Don Pullen and the Salish and Kootenai tribes of Montana.

“Earth Eagle First Circle” was completed this month and will be performed in Montana, Pullman and Seattle.

The performance features members of Fagan’s dance company, primarily African-American, performing in Jazz/Indian music by Pullen and the Chief Cliff Singers with themes inspired by Native American dances and legends.

Dance pieces that will be performed are “The Eagle Staff is First,” “Cultural Warrior,” “River Song,” “Spirit Seeker’s Reservation Blues,” and “Reel on the Run.” Included in the program will be “Moch Dreams,” to music by Andre Jollet, Thelma Monk and Wyston Manillic; “Towing Shadows,” to music by the Preservation Hall Jazz Band; and “Ducks Trail,” performed to music by Antonio Dvery.

Fagan and his company began the project last October, which is funded by a $150,000 grant by the Lila Wallace-Reader’s Digest “Art Partners.”

Fagan was long interested in the art and culture of other cultures and investigated some in Brazil, Australia, New Zealand, and Africa, when his company was on tour.

Tickets for this extraordinary performance are priced from $8 to $25 and are available at Beasley Coliseum, UI Ticket Express, and Albertson’s in Lewiston and at the door prior to the performance.

The performance is sponsored by Festival Dance and Performance Acts.

Group rates are available by calling Festival Dance at 883-2367.

Scholarships AVAILABLE!

The Gritman Foundation is accepting applications for the Foundation Medical Scholarship.

Applications are available by writing to the
Gritman Foundation Scholarship
Gritman Medical Center
700 South Main
Moscow, Idaho
83843

Applicants must reside in Latah and Whitman County residents pursuing a human health or medical career.

Applicant must reside in Latah or Whitman County a minimum of three months per year.

Applicant must be enrolled in a recognized course of study through an accredited college or university.

Scholarships of up to $300 per year may be awarded.

Scholarship applications must be returned by Friday July 21, 1995.

**“Addiction,” who by thought as I found myself in love with the euphoric effect of Therapy.**

**“The Headhounds have captured their stage excitement within their album. An example of transformation from stage to album is the song, “Sui. It has the groovy sound shadowed within a mat of a rich reed’s reeds with the lightning of guitar.**

**The only classification this music can have is pure garage rock, a blend of punk as well as guitar, bass, drums and vocals.**

**An easérc shot of light palls of rain come down when you hear “The Headhounds’ album. I found it to be transcendent for it is clean enough for me to see the fist grooves the band has instilled within their skills.**

**If you have sent these photos form live or heard them from friends or the radio then definitely pick up their disc.**

**If you’re never heard of them, mark only a few times you have.**

**The Headhounds, being local to the area, will be selling their disc at shows as well as local Record shops both here in Moscow as well as in Seattle.**

**The CD will be officially released this Friday, followed by a release party featuring special guests Circle of Knots another wonderful band in the area as well as Tine pizza from Benegas to the first set.**

**The show will start at 8 and end at 11:30 p.m. at the Moscow Community Center. There is no admission fee for the show for all ages. So go check out the band and show it love, it is a must for all collections.**

-Matt Baldwin

---

**Bologna. It's those kind of boyfriends that ruin it for the rest of us.**

**They're just too nice to tell the truth. Their attempts are adorable, but false nonetheless.**

**But let me try and refocus my cynicism away from social issues and back towards While You Were Sleeping.**

**Why was it so boring? Oh, I don't know. Let me nettle off about 50 reasons. Stock characters. Poor acting. Predictable dialogue. Predictable plot. Predictable plot. Predictable plot. Let me count the reasons on my fingers for a second. One, two, three, four, five. That's not quite 50 reasons, it's just five. But it's enough.**

**It didn't help that the movie starred Sandra Bullock, current flavor of the month actress, either. Bullock, who stole everyone's heart in that coming/onion/non-sense known as Speed (which was really just a big budget version of "Chips"), isn't told me on her wealth of talent. So she's moody cute. So what?**

**And Bill Pullman. Now there's a bundle of laughs. Maybe, it's just me, but I think he's boring. He was boring in Sleepless in Seattle and he's boring in Sleeping.**

**This movie probably doesn't deserve the rating I just gave it. Heck, if it had been on TV one night and I wasn't expecting anything, I might have thought Sleeping was just kind of crappy. And I could be Mr. Sunshine and tell you I adored it, but then you might go and waste your money. So for the record: I think While You Were Sleeping was cosa. There, I said it. I feel better now.**

-Brett Craig
Hemp Fest rolls into town

Jeremy Chase

"Plant a seed and grow a revolution..."

This is the advertisement for Moscow's second annual Hemp Festival, tomorrow at East City Park from noon to 8 p.m.

Shayne Kimball, coordinator for the festival, said that the event and theme are to educate people about the significance of hemp.

"It's to educate people about the difference between dope and rope," he said. "It's also to help get rid of the stigma that hemp is marijuana.

Hemp, which is the name for the male species of the cannabis plant, does not produce a "high" by smoking or ingestion of it, since it virtually has no THC content.

Contrary to what people may think, the fibers that make up hemp can be used for several industrial purposes, such as the manufacture of clothes, bags, and even paper. Kimball said that the United States enacted its legal ban on hemp in 1957.

The ban was the result of the development of synthetic fibers from oil to produce clothing, increased production of paper from trees, and intense competition from the cotton industry. All of these diminished the use of hemp, and hemp was soon forgotten as a commercial product.

But today, with dwindling natural resources, Kimball said that hemp would be a logical choice to use as an alternative.

"If the world's population is supposed to double in 50 years, we need to look at alternatives for fabric, paper, and for building material," he said.

Currently, there are a host of countries that are using hemp as an industrial product. Kimball said that England has used the male and hermaphrodite species of hemp for commercial purposes, France has people on the developed plywood made partly from hemp, and Australia is producing T-shirts that are 45 percent hemp.

On a smaller level, this year's Hemp Festival will feature retailers of hemp-made products, as well as information about the other many uses that hemp can provide.

Kimball said that there will be 14 to 15 booths selling everything from backpacks, hats, twine, and candy bars made from hemp.

Kimball said that he expects a large crowd for tomorrow's festival.

Placing ads in Boise, Lewiston, Sandpoint, and Missoula, Mont., he said the number of attenders could be in the neighborhood of 3,000 people.

"We've advertised across the state," he said. "I've expect 2,000 to 3,000 people. Last year's festival drew around 90 people. And like last year, the event is free to the public.

Other than raising awareness of hemp, Kimball said that the event will also have a full slate of bands from the Moscow/Pullman area. Circle of Knots, Royball, The Headphones, Cross-Eyes Catfish, Bughouse, and Alligator Pond are all part of this year's entertainment line-up, and will play throughout the festival.

Kimball hopes that people have a great time, but not too caught up in the spirit of things. "Don't think you can light up at hemp fest," he said. "Remember that marijuana is illegal." Alcohol and glass containers are also prohibited at the festival.

As the time for the festival draws closer, Kimball expects the best for the event and anyone who attends.

"I hope that a lot of people come out and educate themselves and enjoy the music and weather," he said.

Bedheads CD party tonight

You're invited to the Bedheads CD release party April 28 from 8-11:30 p.m. at the Moscow Community Center. The party is sponsored by Brangam's Pizza and LusBerki DJ Productions. The evening features music by the Bedheads and special guest Circle of Knots, and free pizza while it lasts. Admission is free, all ages are welcome.

Harmonica blow off at Mingles

Yo and the Cats and five of the northeast's best harmonica players will be at Mingles Friday night. The show begins at 9 p.m. and tickets are $3 at the door.

Pucker up!

Joe Harrison
An actress prepares to rehearse "Sister Mary Explains It All For You," playing at Collette Theater tonight and April 29 at 8 p.m.
Hatchery creates home for dammed fish

Dennis Sasse

People who fish have an almost fanatical devotion to their sport. They sit all day in boats on lakes, and spend long hours on and emerging coastlines, with ice fishers actually being in the state of suspended animation. Waiting, waiting for the next strike in the hopes of dinner. Fishers give no thought to a meal that could have originated at the Dworshak National Fish Hatchery.

Located on the confluence of the Clearwater and North Fork of the Clearwater rivers, this hatchery produces steelhead and spring chinook salmon and rainbow trout. The Dworshak hatchery is the largest of its kind in the United States and one of the largest hatcheries in the world.

The hatchery is responsible for the survival of steelhead and spring chinook salmon, which are native to the area and have been stocked in the Clearwater and North Fork rivers. The hatchery also produces rainbow trout, which are released into the Clearwater River for angling.

The hatchery is operated by the U.S. Fish and Wildlife Service and is one of the most well-known and popular hatcheries in the West.

Construction on the hatchery began in 1969 as part of the project to build Dworshak Dam. The dam is the largest earth-filled dam in the United States and was completed in 1974.

The dam is an interesting site to visit while in Orofino and the visitor center is located at top of the dam. Guides are available to answer questions and during the summer tours of the dam are available.

In 1973 the 717-foot Dworshak Dam was completed and blocked access to natural spawning grounds for steelhead. In an attempt to replace lost spawning ground the Dworshak National Fish Hatchery was built.

Eggs are collected from returning fish and placed in indoor incubators until hatched. Once hatched the fry are placed into a nursery and fed for the first time. Here in the nursery young fish are grown to a length of 9 inches before being placed in outdoor fish ponds. Once in the outdoor ponds the fry are kept until they are ready to release to the rivers and streams.

The ponds are water that is temperature controlled, filtered and supplied with scrapings. A water flow of 37,000 gallons per minute is maintained in each of the ponds to control the life of fish. The total pumping capacity of the hatchery is 90,000 gallons per minute.

Water from the hatchery is either released into the river or fish are placed in tanks and transported to other locations for release.

Water for the hatchery is pumped from the North Fork Clearwater River and supports the entire hatchery. The water in the hatchery is monitored for flow, turbidity, temperature, pH and alkalinity. The water is recycled through sand filters and 98 percent is reused within the facility and the remaining 2 percent is fresh water from the river. Spent water is sent to biological filters where excess ammonia is converted to nitrates.

The hatchery holds close to 4 million fish in the ponds as they mature and await release. Of the fish released only about 1 to 2 percent return to the hatchery to spawn and less than 0.3 percent of the spring chinook salmon return.

To find the hatchery take Hw 12 east towards Orofino and look for the signs. For more information about the Dworshak National Fish Hatchery contact them at P.O. Box 18 Ahsahka, ID 83520 or call 208-476-4591.

Water temperature at the hatchery is controlled in part by drawing water from various depths in the reservoir behind Dworshak dam.

Nez Perce National Park plan in the works

Erik Marone

The Nez Perce National Historical Park was established 30 years ago, it consisted of 24 sites in north central Idaho with park headquarters in Lewiston, Idaho. In 1992, an additional 14 sites in Washington, Montana and Idaho were included in the park's domain.

The management of this vast area became too difficult from one central office. It was divided into five separate management districts. Today, the park is in the process of developing a General Management Plan (GMP) and Environmental Impact Statement (EIS) for the next 15-20 years. The goal is to have a comprehensive management plan for the park ready next summer and to begin implementing the plan by fall 1996. With a total of 38 different sites in four states, it is not an easy task.

The National Parks and Recreation Act of 1978 requires every national park to prepare a GMP for every park unit in order to ensure that the park is being managed in the most efficient manner and consistent with guidelines set up by Congress. The plan needs to address proper management, protection of park resources and to provide for adequate visitor services and facilities as well as minimizing the amount of environmental impact.

For 50 years the park has preserved and interpreted over 11,000 years of the Nez Perce culture. The Lewis & Clark and Loilo Trolls pass through the area, which brought Euro-American and other native American cultures into contact with the Nez Perce, helped to make it a very diverse and complex culture in the recent past.

Every year, the park offers a number of opportunities for visitors to experience many aspects of traditional Nez Perce life in addition to the regular park facilities.

Today, it is becoming more difficult to fulfill the mission of preservation and protection the culture and history because the Nez Perce communities are becoming more dispersed and divisions within the tribe have diminished tribal cooperation.

Although the Nez Perce have been able to work closely with the National Park Service, the park would like to help bridge some of the gaps that have developed between the many tribal bands over the years. The Nez Perce Museum is located at Spalding, Idaho, 10 miles east of Lewiston on Highway 12. Although the formal public comment period on the new GMP is over, the Nez Perce National Historical Park always welcomes public input about park operations and services. For more information contact park superintendent Frank Walker at (208) 843-2261 or write to the Nez Perce NHP, PO Box 91, Spalding, Idaho 83551.
Nature walk
April 29

Community Forest Stewardship day will be held April 29 from 9 a.m. to 3 p.m. at the UI Experimental Forest, Flat Creek Unit.

There will be interpretive walks on the newly constructed Forest Stewardship Trail led by natural resource professionals. Displays will also be presented by state and private agencies covering all aspects of forest stewardship. A free picnic lunch and flagger sports demonstration will be provided.

The Flat Creek Unit is six mile south of Harvard on State Hwy 5. Follow the signs from Harvard or Deary. Sponsored by the UI Cooperative Extension System and the Palouse and Student Chapters of the Society of American Foresters.

Call Fish and Game for info.

Thinking about heading out to fish this weekend? The Idaho Department of Fish and Game has a toll free fishing information hotline: 1-800-ASK-FISH.

Updated on a biweekly basis by Fish and Game fish managers the hotline offers up-to-date information about fishing spots across the state.

For the best information call the night before you plan to leave and learn about the best spots and other tips.

Just hangin' out

Contributed photo by Anne Drobitsch.

Jamie Tolbert tied for fourth place in last weekend's Snake River Rock Rodeo and Granite Point clean-up.

My memories of the big race

During the spring of my senior year in junior high, I decided to run my first Bloomsday. I lived in Spokane, but it wasn't that big an event back then. Even so, my PE teachers—Ted Davies, Bob Brock and Betty Barter—and math and science teacher—Dan Schmidt—had been talking about it since school started.

Brock and Schmidt were zealous, entering every road race available in the area and warming up by running the school's mile long drive during lunch hour almost year round.

Our school was too small for football, barely managed soccer and scrambled to get enough players for varsity and junior varsity teams in volleyball and basketball.

That year, my entire class ran track and most of us did the longer junior high races—400 and 800. Several of us also started training for Bloomsday in mid-March by following Schmidt out the drive-way and back during lunch.

By the first week of April, most of us realized that we wouldn't be able to get us ready for what was then 7.3 miles over the undulating downtown and adjacent residential area to the west and northeast.

Then there was The Hill.

Always said in an unread tone of voice with just a hint of fear. We could train for The Hill on the sandy hills behind our campus, but even that couldn't be enough when we were limited to PE twice during the week and lunch hours.

That's when we turned to individual training. You feel something which cannot be equalled when you crawl out of bed before anyone else in the house is up and the light is just breaking the hori-

zone. I ran about a mile east along my residential street in a near northeast neighborhood of Spokane (around Hilliard) and back in time to throw my little sister out of the bathtub, take a shower and still catch the bus.

Some days it was close, but I never got to cut school by missing the bus because of running. The fact there was a chance I might miss school added to the thrill of the run, especially when I got a late start. I'd like to say I wasn't a breeze after all that, but it wasn't. It wasn't the killer either, though. I didn't make it quite all the way up the half mile hill that year, or the next, but I had fun.

The second year, it was much better than the first, and helpful people set out sprinklers and hoses along the tree lined residential streets.

That was great for keeping cool, but hard on the feet as a shoeless tend to cause blisters if you run in them. My stepfather and I both managed to improve our times from the previous year.

Needless to say, the result was different as a participant than it was or has been since as a participant.

It's an experience I will never forget and may get to repeat some day, preferably with my own children.

Next time though, I'll probably walk.

Lasorda and I bleed Dodger blue

Dan Eckles

FLASHBACK October 1988...Dodgers have come on to win 2-1 in the 8th inning as they come from behind in the bottom of the ninth. There are two outs and the closer has a platoon control, but to everyone's surprise he walks Dodgers' free agent bust Mike Davis.

Most baseball fans know what happens next. A game-winning, home-run-shy Ken Gibson steps to the plate to pinch hit for Tommy Lasorda's gamy leader, Gibson sends a Dennis Eckersley fastball over the wall, putting the Dodgers up for good and sending Davis away.

Not over and not out counting first base and gives the Dodgers a 5-4 win against the Oakland A's in the World Series.

Los Angeles went on to win the Series over the A's 5 games to 1 with a 3-2 win in Game 6 (Mike Scioscia Strikeout, Mike Itoh, Alfredo Griffin) and a pitcher named Hohmer.

That series, and in particular Gibson's heroic, are my greatest professional sports memory. Dodger Blue was victorious in the 1981 series over the pinstripes of New York as well as if my boons continue their seven-game plus the fall of 1999 should provide the Big Blue Kid with some fond memories as well.

The sentimental favorite to win Baseball's biggest prize would have to be the Dodgers. I'm not saying from top to bottom they are the best team in baseball, but they play in the relatively weak N.L. West and anything can happen in a best of 7 postseason series.

The City of Angeles does have at least one angel in the outfield and he doesn't play for the Angels. 1994 N.L. Rookie of the Year, Raul Mondesi zooms left field and has the complete package. He hit for average (305), 2nd in the league in average, he hit for power (11 SB) and has a cannon for an arm which he can use to straight away upending all outfielders in assists. He led the league in stolen bases only two thirds of a season. Oh yeah he started this season with a bang, dripping 6 RBIs in his opening night action against the Florida Marlins.

Catcher Mike Piazza (31.4, 24 HR, 92 RB1) is one of the brightest stars in the game and has to be a potential MVP candidate. First baseman Eric Karros (236, 16 HR, 46 RB1) came on strong after starting last season in a funk. A very talented young talents of Delino DeShields, Henry Rodriguez, and heralded rookie Todd Hundley.

Hollandshead and the Blue Crew has the makings of a dangerous lineup.

Ramirez-Martinez, Telesco Cassadi, and Pedro Astacio form a solid 1-2-3 starting rotation out of the pen three starters as good or better than anyone else except Ted Torano's Atlanta Braves thanks to the talented talent pool brought on by expansion. The Dodgers staff is in the running to be the best in baseball.

In the 90's, it is our goal to outrace our opponents. Only one2 things I want to do is to score more runs than the opponents. Once again the Dodgers are the best team in baseball.

Free agency nabs three Vandyals

Former Oregon State running back Sterriden May (bottom) signed an NFL free agent contract with the New York Jets.

Former U of L running back Tommy Green (center) signed a contract with the Philadelphia Eagles.

Former U of L running back Tommy Green (bottom) signed an NFL free agent contract with the New York Jets.

Former Idaho stars Sterriden May (bottom) signed an NFL free agent contract with the New York Jets. Wide receiver Kyle Gary (RBI) signed with the Atlanta Falcons and fellow wideout Keith Neil was picked up by the Houston Oilers.

New Zealand native crashes Big Sky

Ben Carr

Hadley will be going for the conference championship in Boise. Last season Hadley didn't compete in the conference championship because former coach Dee Scott suspended him due to disciplinary problems.

According to Hadley, Scott's "disciplinary problems" amounted to little more than a personality conflict. Whatever the problems were, Hadley didn't play in the Big Sky championship and that bothers him.

"I think the tournament means a little more to me and the other seniors," Hadley said.

It's too early within the power of the sixth-seeded Idaho squad to finish among the top two teams at the Big Sky Championships and not just among the top four, as is their goal.

"I feel we'll do well," Hadley said. "We've got a great coach and great players, a team that works well together. We've got one of the older teams in the conference so we can get the job done."

The 21-year-old senior from Hamilton, Idaho knows what he means when he talks about getting a job done; he's done it often enough.

At a solid 6-foot 5-inches Hadley can cover the court with surprising speed. From service to net, Hadley may be the fastest person on the team.

With a serve that is remarkably not only for its power, but for its action and placement, Hadley can range the court from front to back and feel equally comfortable.

Hadley uses his height advantage to rush the net at every opportunity and attack the ball. Like King Kong on top of the Empire State Building, Hadley just stands tall and swats everything that comes flying nearby.

"You've got to apply your strength, but," Hadley said. "Like dominating the net. With my height I can reach around the court and volley."

Tesch finds home on UI golf team

Mark Vanderwall

It drives the ball with authority, it looks like a machine, and it scores by 70's, it's also a woman.

Jeni Tesch, a junior from Vanlvale, Wash., has found a home on the UI women's team, after originally just planning to attend the Moscow school for the Engineering Program.

Tesch, who just started playing golf as a junior in high school, didn't foresee a college career, but little did she know that the year she would make her move to Idaho, that golf career would make the move with her.

"I came up here for an education and being able to play golf is just a bonus," said Tesch.

Tesch, who is relatively new to one of the oldest sports around, has found that the pressure associated with not having played in many Junior Tournaments often finds her on the course.

"I haven't played in a lot of the Junior Tournaments that the other girls have and there is still a lot of pressure when I go out and compete," said Tesch.

When growing up out on the outskirts of Spokane, Tesch played basketball, softball, run cross-country, and excelled in all of them. Her decision to play golf came after her sister's graduation from high school.

Her sister was the pitcher and she was the catcher on the softball team, but after her sister's departure to the college level of play, she decided to go out during the summer and pick up a set of clubs with her dad and grandfather.

"My dad played and I decided one day to go out and play with him. I really liked it," said Tesch.

During the move to golf, Tesch had to give up her other love of softball, but the sacrifice paid off for Tesch in the last tournament of the season.

Tesch, who entered the Eastern Washington tournament with a cold and also braved the cold found herself in the winner's circle at the end of the tournament, with a score of 85.

Tesch didn't feel she played to her caliber she normally does, but she did what it took to win.

"I would rather take 13th out of 90 with a 79 (Hawaii) than to shoot an 85," said Tesch.

With all the time spent on the golf courses, Tesch still manages to find time for her academic courses as well.

"Academics will always come first, but it's nice to do well at both," said Tesch.

Tesch doesn't spend her summers just working on a tan and her golf game, but rather making money to pay for school and also to golf after work.

"I am not a member anywhere, so I have to pay to play, so that means I have to work to support myself," said Tesch.

Tesch, who originally came here for the Engineering program, has since moved to education, after a summer working for the NASA program. Tesch now combines teaching the NASA program in the future, as well as maybe teaching younger kids to chase the little white ball around.

"As far as people that got her started, Tesch credits her dad, Bob Scott, Randy Allen, and current Vandal coach John Twinning. The funny thing is that Twinning, also a late bloomer, credited the same people in his interview. With the talent these two players have produced, maybe the Vandals should hire Scott and Allen for recruiting.

Heading into her senior year, Tesch sees a conference title in the works for her last season. "I think we are starting to gel as a team and coach is getting us bigger tournaments. That's all," said Tesch.

With the core of the team returning and with the poise that Tesch carries on the course, Idaho will be a strong contender for the BSC Championships come next fall. If they don't win it all, you won't see Tesch throwing her clubs or cursing in disgust, but you will find her out the next day working hard as always to improve her game.

Idaho golfer Jenny Tesch practices her pitching game during practice Thursday.

Jeff Curtis

N.L. -- FROM PAGE 14

Starting pitching. "My York and Florida are improved since last season, and to have the firepower to make any kind of run at the post-season."

Thursdays are when I go out to pitch in this team: Houston, Cincinnati, St. Louis, Chicago, and lowly Philadelphia. "The Buckeyes have failed to off the face of the earth since their three-year playoff run of 1990-92."

Pittsburgh ownership invented the excuse that small-market clubs can't compete. "What a crock, take a line out of Field of Dreams... If you win they will come. Spend some money and you'll find there is somewhere else to live other than the cellar. Hey Pirates management, winning HAS a price.

It's a foregone conclusion that N.L. West clubs will be coughing on the dust kicked up by the A.L. boys.

The Dodgers let the opposing team's small Tommy's pasta and then while they're mesmerized by the small, they take a few Louisville sluggers and beat opposing pitchers into oblivion. The Giants, namely Barry Bonds and Matt Williams, stay focused enough to keep the Giants in the hunt, but 2-0 isn't enough to win a division. Cleveland is the Philadelphia of the West, all hit so pitch. The Padres should just pray for rain. Stay tuned Tuesday for A.L. predictions. It could happen so you better watch.

Bruder—staring down the competition

Damon Barkdoll
Staff

Don’t let the accent fool you. He’s not a transfer or a player trying to teach American incompetents how to properly play American football, nor is he a wanne-be American trying to comprehend the popularity of apple pie and Madonnas.

His name is Frank Bruder and the Nebraskan, Germany native, has traveled to Moscow, USA to run long distance for the University of Idaho men’s track team.

Bruder, a sophomore, recently qualified for the NCAA Track and Field Championships in the 3000 meter steeplechase. Besides running the steeplechase, Bruder runs the 1500 and 3000 meter long distance run. The uptown German finished the event with a time of 8:43.46 and launched himself into third-place at the Oregon invitational in Eugene. The last Vandal to qualify for the NCAA’s Track and Field Championships was Frank Beut and Lee Roy Robinson, as both of them qualified for the 800 meter in 1982.

Although this is a tremendous honor for Bruder he is not at all surprised of his success.

“I qualified last year but I was hurt during the season and my time of 8:45 was automatic. I am excited. It’s hard to get to nationals, but I knew I could easily do it,” Bruder said in a calm German accent.

Once again, Bruder feels that he will be able to compete against some of the best trackers in the nation.

“Right now I’m ranked seventh. It’s hard to make it to the finals, but once you get there anything can happen,” Bruder said.

This sophomore success story has found a way of intimidating the competition.

“You look in their eyes when you pass them. You don’t have any friends out there. I get along with everyone after a race, but during a race it’s pretty intense,” Bruder said.

Bruder is currently training hard for the next three meets and then eventually nationals, but he claims that hard physical training isn’t always enough.

“Most of the time you’re running against yourself. You’re the only one that can stop you. Individual sports are tough...you must be mentally ready to compete, because if you’re not there’s no other teammates to take the blame,” said Bruder.

Bruder had that same mental toughness that he speaks of to leave his mark on Germany and come to the UI.

“I wanted to come to America. When I got on the plane it really hit me, leaving home. The first two or three weeks away from home were hard, but I finally adjusted. My parents are really proud of me and although they don’t cheer me on, I know they’re proud,” Bruder said.

Coming to the United States was a hard decision for Bruder to make, but once the decision was made, he had to find a college to attend.

“My final decision was made eight weeks before school started. I had another offer from Minnesota, but I didn’t want to go there. I came to Moscow in August and checked out the campus and I really liked it here. My tuition and books were paid for and I wanted to come to the UI,” Bruder said.

Still, Bruder is here to Idaho. Bruder has consistently set goals for himself and although those goals are continually broken.

“I kind of have a problem. My goal this year was to run an 8:45 in the steeple, but I’ve broken that. It’s hard for me to set goals. My next goal is to do well at nationals,” Bruder said with an intense look on his face.

Setting goals is not a major problem as Bruder puts it, but the German runner does have his hands full taking 20 credit hours of classes and maintaining a 3.6 GPA.

“I’m a guy who learns more stuff in class, so I try not to miss. Right now it’s kind of tough because I’m in class only 3 or 4 days a week. When I first came here I set my goal at a 3.0 GPA, but now I want to get a 4.0,” Bruder said.

Organization and time management are something that Bruder’s best traits and it’s visible as Bruder has already set career goals.

“My major is Economics and I want to be a stock-broker or something,” Bruder said. “I’ll be going to grad school here in the U.S. and eventually return to Germany.”

So Bruder is going to concentrate on being the best he can be, regardless of how many personal goals he has to break.

An Alternate Way To Reach 11,000 People

The University of Idaho Argonaut distributes over 8,000 copies every Tuesday and Friday to over 140 locations throughout the UI campus and the Moscow/Pullman area. Argonaut Classifieds are a cost effective way to reach the students and faculty. Over 90% of the UI population reads the Argonaut.

To place a classified ad, just come up to our offices on the third floor of the Student Union, or call 885-7825

MOSCOW SCHOOL OF MASSAGE 1-YEAR PROFESSIONAL TRAINING. For information call 882-7867, M-F, 9am - 5pm.

Outdoor Mass and end of the year BBQ April 30. Mass will begin at 11am and the BBQ and games will follow. Mountain View Park will be the place! Rides available from St. Augustine’s Catholic Center at 10:30 am. Come join us for the day or just stop by! Any questions? Call 882-4613.

Hawaiian dinner and dance Friday at 7pm! Come down to join the fun at St. Augustine’s Catholic Center. Dinner at 7pm dance to follow. Questions call 882-4613.

EDUCATION
**Letters to the Editor**

**Even Nazis are human**

Upon reading Mr. Davidson's article in which he expressed his worries over the "resurrection" of Nazism, I felt I needed to respond.

Now, you must understand that I agree with Mr. Davidson in sentiment, but I do not agree with his tactics. Nazis are human, and whether we like it or not, they will remain human. They embody everything that is wrong in our society: despotic and poor in the human soul. Contrast to popular (and commercially successful) opinions, there are reasons for what Nazis believe, however repulsive and distasteful they may seem. Nazis is, as Mr. Davidson says, a "philosophy of hate, destruction, and death." It is, nevertheless, a product of the human soul, formed from the most broken-hearted human mind-set ever exhibited. What would be the use of love if hate did not exist? Would we appreciate peace without the possibility of destruction, or life without death?

Mr. Davidson states that "we do not need non-Nazis." And just what would be your solution to all of this? Exterminate them? Perhaps then the Nazi's Final Solution was a brilliant stroke of genius. It killed the wrong people, perhaps? Would we be happy if the Nazis had exterminated the entire population of blacks, Jews, and other minority groups? It is extremely frightening (in a morbid way), I ask Mr. Davidson in semiotics for the love of God—we've progressed nowhere. Nazis are as human as the people hate; hate is from fear and fear is common to all. We have at times felt as though above them to despise their existence.

No one need be removed because of "society," they need to be worked back into it. These young men (and I say because young men because most non-Nazis, A.F., or A.N. members are young boys) have simply thrown off those righteous, but useless, claims of society unable to fulfill their needs. They are a people without hope, desperate and hungry for the slightest taste of life. If we love life so much, why are we so stingy with it? If everyone deserves a smile and a kind word as Mr. Davidson claims, what is stopping him? Are we afraid? Are we concerned that we might be contaminated? Are we really so weak? Nazis is to be feared, and humans are weak, that is no excuse. Granted, because the Nazi's anger takes its vent in murder they must receive justice. Mercy, however, has that wonderful, unique characteristic of not being contingent on justice. Mercy may still be served, the body executed for its crimes, while the soul is given mercy and redemption.

Do not think you or I could be above such brutal hatred as Nazism. Do not think for a moment that you or I, if we were in such a hopeless position, would not fiercely hold to a "philosophy of hate, destruction, and death." If hope is not an option, then nothing is an option, and the reality of Nazism is as viable a rational position as the real ideals of a love that is never given away. We, as a nation, have the biggest hearts of any on this planet, but they are so broken and bruised so that a bloody-wrist men, and we, in our comfort and complacency, arrogantly perceive the people as being ugly and inhuman. The force of this directed love can only cause a man full circle to blind hopeless hate, an emotion and a need more rapacious that the petty ideals of love that has never been given away. We, as a nation, have the biggest hearts of any on this planet, but they are so broken and bruised so that their eyes are so on becoming in his soul what he inflicted on the bodies of others, a living skeleton.

Letters or exist? Use arms, not letters. Or exist? Use arms, not letters. What would the use of love if hate did not exist? Would we appreciate peace without the possibility of destruction, or life without death?

Mr. Davidson states that "we do not need non-Nazis." And just what would be your solution to all of this? Exterminate them? Perhaps then the Nazi's Final Solution was a brilliant stroke of genius. It killed the wrong people, perhaps? Would we be happy if the Nazis had exterminated the entire population of blacks, Jews, and other minority groups? It is extremely frightening (in a morbid way), I ask Mr. Davidson in semiotics for the love of God—we've progressed nowhere. No one need be removed because of "society," they need to be worked back into it. These young men (and I say because young men because most non-Nazis, A.F., or A.N. members are young boys) have simply thrown off those righteous, but useless, claims of society unable to fulfill their needs. They are a people without hope, desperate and hungry for the slightest taste of life. If we love life so much, why are we so stingy with it? If everyone deserves a smile and a kind word as Mr. Davidson claims, what is stopping him? Are we afraid? Are we concerned that we might be contaminated? Are we really so weak? Nazis is to be feared, and humans are weak, that is no excuse. Granted, because the Nazi's anger takes its vent in murder they must receive justice. Mercy, however, has that wonderful, unique characteristic of not being contingent on justice. Mercy may still be served, the body executed for its crimes, while the soul is given mercy and redemption.

Do not think you or I could be above such brutal hatred as Nazism. Do not think for a moment that you or I, if we were in such a hopeless position, would not fiercely hold to a "philosophy of hate, destruction, and death." If hope is not an option, then nothing is an option, and the reality of Nazism is as viable a rational position as the real ideals of a love that is never given away. We, as a nation, have the biggest hearts of any on this planet, but they are so broken and bruised so that their eyes are so on becoming in his soul what he inflicted on the bodies of others, a living skeleton.

We need Nazis, because they are us. Indeed, they are "us." They are hungry. If you possess the means and measure to satisfy their hunger, you do. It is nothing to be feared in comparison to the slow, ugly death of an soul. —R.J. Johnston

**Set the record straight**

I am the D.A.R.E. Officer for the Moscow Police Department. I am writing this letter in response to the article that appeared in the April 18 edition of the Argonaut and accused me of throwing a fit cigarette from the Moscow Police D.A.R.E. car.

I am sure that Mr. Grow's intentions are legitimate, but I am concerned about his making allegations of impropriety on my part without first verifying his facts and confirming his assumptions. I do not know what Mr. Grow saw, as I was not there.

I have been the D.A.R.E. Officer for the past two years, I have never been able to exemplify for the kids I have the pleasure of teaching. Now, in spite of two years of efforts, all it took was one letter to the editor to make my D.A.R.E. campaign look bad. I do not think the principles I am teaching. Principles that are a part of my life, not just my job. I do not usually respond to letters to the editor, even ones in which I have been slighted. In this case I feel it necessary to respond to the sake of my D.A.R.E. kids who deserves a better program. This truth is that I do not smoke. I do not drink. I don't follow the latest cigarette butts out of car windows. I teach, and firmly believe, that a drug-free life is the best life I have. I have never done anything for which I feel the need to apologize to Mr. Grow's kids.

However, I feel that Mr. Grow owes apologies to me, to the Moscow Police Department and most of all, to the kids he has mislaid with his baseless accusations. I would also invite Mr. Grow to find out what D.A.R.E. is all about and to meet the D.A.R.E. Officers in the area. I think that if Mr. Grow would take the time to get to know people and get his facts straight we could avoid being bombarded with misinformation such as that presented in his letter.

**Treat Architecture with respect**

At the very heart of our campus, Architecture South—originally a gymnasium, Landscape Architecture, and the Drama buildings are an absolute disgrace. This administration ignores the professors teach and students learn in buildings that were not designed for their current use. A recent safety inspection of the Architecture facilities brought numerous violations and the shallow breezeways of shutting down the program. If demands were met. What an outrageous insign. The College of Architecture has struggled in making the campus safe for over fifty years and it is considered one of the finer programs on the west coast. A great majority of the students on this campus have heard the horror stories of what architecture students must endure to earn their degrees. Their all-nighters are legendary.

This program has the respect of its peers at other universities in the west. It also has the respect of the students on our campus. It seems that the only people who don't know what's going on in the Architecture program are the people in the administration building. If the proper study of architecture creates an unusual fire hazard then the proper facility must be provided to ensure compliance. Provide the College of Architecture with a new facility or get off their backs. The goal is very simple. Begin taking the steps necessary to achieve that goal. Do not jeopardize this program by continuing to insult the professionals who have strived, amidst terrible conditions and a skeletal budget, to make this program what it is today.

—Jeff Smart

**Lessons come at high cost**

The Americas lost its taste for war yet. If Oklahoma City should have taught us one thing, it should have been that the human cost of war is too heavy to justify going to war. One would have thought that Vietnam would have taught Americans, but then America followed it with the Gulf War. Before that, one would have thought that the Civil War would have taught Americans, but then America followed it with the World Wars. And in the beginning, one would have thought that the Revolutionary War would have taught Americans, but then America followed it with the Indian Wars. In each war cited above, in some way, women and children have been the victims of American military force. Being on the losing side of a war does not make the lives lost in war fare any less innocent. And, being on the winning side of a war does not make the lives saved by warfare any less guilty. War is waged when political power becomes strong enough to field military forces, and those forces are used to coerce other political groups into submission, which would not otherwise take. War is about intolerance; it is about control, about expelling an opponent than to work out a sympathetic compromise. America has no intention to compromise on its "World's Greatest Power" position, and our nation externally or internally.

No one need to lose its taste for war yet. And the victims in Oklahoma City are repeatably put in that category. The war that America is waging on its own people is, after all, the war we wage on the whole world. Remember that in the Gulf War, the innocent bystanders killed by American smart bombs were simply clicked up as collateral dam age. I am an American war wages, and this is the mental ity of America, which continually brings to the attention of the world that field police and armies to wage war against their own and other people. Nation destroying itself is the taste for war, and works to abolish all the mechanisms of stable peace. Earth, will be humans safe from the threat of battles like Oklahoma City.

**Argonaut Letters Policy**

The Argonaut welcomes reader letters. They must be one page or less typed, double spaced, and include the phone number and address of each writer. Letters may also be submitted by e-mail to argonaut@ulauds- ho.edu or by fax to (208) 885-2232. The Argonaut reserves the right to refuse or edit letters. Multiple letters with the same position on a topic may be represented by one letter.
Too many power plays going on

Historically, this nation has tread a fine line between wanting a strong federal presence in power and a "hands-off" system of ruling. These power distributions tend to go in cycles, and have ever since the Articles of Confederation were repealed. The times are changing, dating back to the genesis of America as a nation. As citizens, we tend to take the swings in philosophies for granted.

However, the cycle may just have shifted far enough that expected order is a thing of the past. Whether one is looking at an earth-shaking decision, the Supreme Court ruled 5-4 to overturn a 1990 Congressional act that bans anyone from carrying any firearm within 1,000 feet of a school. The decision expressed the Court's opinion that Congress has overstepped its Constitutional bounds in regulating interstate commerce with the passage of the Gun-Free Zones Act of 1990.

Whether the law was just one, or the question of what a person would need a gun near a school for, is beyond the scope of this editorial. The point is that the Supreme Court has once again crossed the legislative branch's message: the federal government has exercised too much power in the lives of its citizens. Naturally, the next question becomes: Is this a good thing?

According to the Constitution, any rights not delegated to the federal government or denied to the states revert to the states or the people themselves. Freedom and self-determination are thus enshrined in the structure of our government, so from that point of view, the Supreme Court's decision was indeed a victory. Most of us would probably agree that the more freedom in our hands as citizens, the better.

However, the simple fact is that no one likes to live in anarchy. We depend on ideas like civilization, justice and equality, and our historical experience has taught us that human beings at this stage in our development are incapable of practicing those values consistently as a society without an infrastructure.

Over the years, we have grown accustomed to having that structure provided by government. So, in that context, the Court's decision might be viewed as a step backwards.

What can't be argued is that people definitely feel the government is overstepping its bounds, especially in the West. As far as evidence goes, the outrage over the Weaver siege and the militia movement in Montana should be enough to convince any skeptics. If recent events are any indication, many no longer feel that our government is of, by and for the people.

In that context, Wednesday's decision was a step in the right direction, for it reaffirmed that states do have rights and that Congress is not a body that can act without regard to the wishes of the governmental bodies they govern. Congress could use such reminders more often, and so could we.

Like so many things, kindness begins with you and me

I n this era of open-mindedness and equality for all it is disheartening to realize that people are still prejudiced against pigs. Perhaps some of you do not think this is a big deal, but as a farm kid whose best friends were herds of pigs (figuratively I have a moral responsibility to defend the public reputation of pigs. If some reason or another, someone has been given a bad rap by popular opinion, we have to do something about it.)

For example, I recently saw the terrific film Pulp Fiction. I loved the movie, but it was severely offended by one scene in which Samuel Jackson claims that pigs are dirty, stupid animals that roll around in their own filth. Anyone who has ever been around hogs knows that this simply is not true. Swine are the cleanest farm animals on earth and is due to proper management or laziness on the part of caretaker. If the owner of the pig does not clean it properly and the only place it can lie in is in feces, then the hog doesn't have a choice.

Popular culture has also given most Americans the idea that pigs are fat, lazy animals that just lie around in the mud. Unlike humans (who sweat), and dogs (who pant), pigs do not have any other way to cool their body heat down than to directly expose their skin to something cool. Usually the only such thing they have at their disposal is mud. However, if a pig were given the choice of a nice cool, clear pool of water or a mudhole, it would choose the pool of water every time. Again, pigs are clean animals. If they are dirty that is just a result of the accomodations provided by the hog producer.

Pigs are also the most intelligent farm animals. They are easy to train, and for this reason they are a perennial favorite as 4-H and FFA projects. Most hogs are also very friendly, and have personalities not unlike a dog. This is one of the reasons for the popularity of pot-bellied pigs as pets. Most pigs are well socialized on the farms with you or shake your hand, but they can still be a bit of a pain. And if you have missed out on a belly full of laughs if you have never seen a hog run at full tilt, smilin' as he goes.

My granddaughter Lylee is one of the most patient, kind, funny, and interesting people I know. And I am convinced it is because he is a hog farmer. His first-hand contact with pigs helped him develop a wonderful personality and a heart of gold. Everyone who ever owned a pig, probably would all live in peace in harmony.

On second thought, probably not. But hogs are beautiful creatures. They Provide companionship, love, personality, and affection. Their benefits to our society are too numerous to count. We need to make the misperceptions about swine in popular culture.

Besides, they taste good.

T o the person I bumped shoulder with near the Campus Center last Saturday, I'm sorry. Both of us were too headstrong to make way on the sidewalk and we bumped into each other. I gave a sarcastic "pardon me," and got mulled up really badly by experiencing the general feelings of anxiety. I felt badly after that. Kindness doesn't disappear, even if you do go on the old Sunday school song. I had my choice of saying sorry or holding onto the promotion of world peace in general, and I blew big time.

Of many may think I'm taking things to extremes in this situation. But if the world ever comes to an end, giving up a little world peace over a simple collision with a pedestrian is a very small price if this planet of ours is to be a peaceful place, shouldn't we be changing our own behavior first? If we can't be nice to each other in Idaho, why should anyone show kindness in Bonita, Riviera or Oklahoma City?

Helen Chenoweth may not be the most normal person of people, but she still deserves a chance. It's courteous to be kind, and people who are like her are not regularly electe d on here. She was popularly elected by the first congressional district of Idaho, and thus deserves our respect, just as Bill Clinton deserves the respect of Republicans nationwide as he serves as President. That policeman had to come with Representative Chenoweth to her meeting on the campus. We're supposed to be rationed beings, aren't we? We can disagree with a politician's policies and opinions without denouncing that police come to the meeting to swell any problems that may arise. This is an institute of higher education, not a kindergarten.

You think that when you grow up, people would be different, that things would change. But they don't! I can still walk down the street and have people scream at me simply because I am "like you dB") just like those fools who peppered me with water balloons while I was walking home from high school one day. Apparently bodies grow up, and even the lanes still have leftovers. This isn't a campus wide rule, it's a personal one. I have a right to walk around without being interrogated or иметь hate and crime and people who'd kill you for a quarter. It is not overloading with kindness and charity and people who hold the library door open for you, either. It's time we stopped playing at being adults and actually started acting our age. Adulthood doesn't simply mean we drive a car we're paying for and are actually working towards a degree that will (hopeful ly) someday get us a job in the adult world, it should mean that we leave our immunity behind and start obeying the golden rule, rather than just feeling like it was some quaint idea from Aesop.

I say should, since more often than not, adults still function like little children. I do not think this was a good example of kindness when he complained that something else would have worked in the Senate had a "real President in the White House." Those two children thought it necessary to blow up the federal building in Oklahoma City and kill scores of people in the process to prove some point of opinion are so better than those grade-school lunchtime butties that find it too粪 to torment every fat kid in the schools. Kindness is not weakness. Mercy does not make one a pushy pansy. Rather, these traits should be regarded as trademarks of a human being that chooses the pool of water every time. A smile, a hello, a kind word to a stranger should not come as a surprise to anyone. They should not set us to regrouping and adding our little acts of kindness to a world that could really use some understanding. And if there's not enough room on the sidewalk, we should be bright enough for both parties to give a little so nobody's head gets rubbed.

Brian Davidson

Swine help us in many ways

I f this era of open-mindedness and equality for all is disheartening to realize that people are still prejudiced against pigs. Perhaps some of you do not think this is a big deal, but as a farm kid whose best friends were herds of pigs (figuratively I have a moral responsibility to defend the public reputation of pigs. If some reason or another, someone has been given a bad rap by popular opinion, we have to do something about it.)
