DON'T FORGET THE DEBATE

IDAHO VS. PACIFIC

Every Loyal Idaho "Stude" Out!

FRIDAY EVENING
Y. M. C. A. HALL

Eight O'Clock!
BOYD VS. PACIFIC

Continued from page 3...

You did not even go to the defense.
Small we-almost don't count for school.
The answer may be yes.

It ought to be an interesting debate
between the Idaho and the school.
The question deals with conspiracy sentiment of labor disputes. Now conspiracy inflations are a very important subject. The argument is strong and clear. And the facts that support the argument are fascinating in themselves. Come out and see the two Idaho boys that are going to be defending their position. Let them sit down in an empty hall while they look back across the platform at Pacific's two boys reading their portfolio of observing delegations. As we are not to argue in favor of conspiracy inflations. The following is the order of speakers:

John McPherson, Idaho.
Harold Poore, Idaho.
H. H. Fendel, Idaho.
W. E. Applegate, Pacific.

At Forest Grove we seem to argue against conspiracy inflations, but the speakers are to speak in this order:

H. R. W. Benjamin, Pacific.
Lawver D. Idaho.
H. R. Taylor, Pacific.
Rayson Leonard, Idaho.
W. H. Taylor, returning, Pacific.

Remember—ADMISSION FREE.
Bring your Idaho shoes. Let us have a running SING. Eight o'clock start. Assembly Hall, Administration building. friday evening of this week.
Be merry, Idaho. Our boys can best.

Boys and girls and fellows and friends:

Phoebe E. Thorp, Idaho.

YOUTHFUL AGE AND AGED YOUTH.

The Eugene Daily Orange reviews editorially the Gov. Ford Reception. Boys' Side controversy as follows:

"Do we study too early in life or too late? Are we in the prime of our lives educationally, or too early? Is the present day making us older while we are growing or younger while we are growing? The question is one of the most important ones that have been the cause of a nation-wide discussion. President-elect of the great University and boys' Side of Harvard University have taken sides in the subject.

Prof. Prof. system of instruction has received wide-mouthing through the existence of his 13-year-old son, who is attending Harvard as an advanced student. Mr. Benes review the system, eighty years ago, as educational advancement. The idea that an ancient system gave at least of the minds of through the mind of the average student.

"Educational advancement is a wicked friend against the child and against the nation.

"A man is as old as he needs to be to realize the age of 25 years.

"It is the purpose to publish the book in a large edition.

"A young man should not be ready to take up his life work until he is 27 years of age. "Children should not be encouraged to play until they are five."

A child turned 25 years before he ought.

The age limit of efficiency is ex-

FORESTIY STRONG AT IDAHO

New Equipment Will Be Second Of Its Kind Ever AORE DISCOVERED. Boost For Idaho:

University of Idaho. Moscow.

Dec. 23. (Special)—By the action of the lumber and timber interests of northern Idaho, the University of Idaho will soon have the best equipped forestry department in the United States. $85,000 was voted at a meeting of the Northern Idaho Forestry Association held in Spokane last week to consider the question of procuring the timber holdings of the members of the association to raise funds for the erection of a forestry building at the University of Idaho. President MacLean and Dean Carlyle were present and outlined the work and future problems and possibilities of the Forestry Department.

Dr. C. H. Shattuck, head of the department, explained his work in seeking commercially profitable processes of handling the by-products of the lumber industry. Realizing that only scientific investigation can discover such processes, the association voted the money needed to enable Dr. Shattuck to carry on the investigation.

"The wood products," said Dr. Shattuck. "represent less than forty per cent of the total products of the tree. The lumberman needs the assistance of the scientist to find ways of utilizing the other sixty per cent. In Europe the by-products are often more valuable than the lumber products. Among the valuable by-products of our forest products are:

- Ethyl alcohol, paper (24 different grades),
- Resin, tar, tanning, crude glue,尔斯, corns,
- Sulfur, oil of turpentine, wood gas,
- Nitric acid, ammonia, soap, tan,
- Mop, manufacturing, wood gas,

"The lumbering manufacturers of the Northwest have failed to utilize these by-products and from choice, but through necessity. It is the purpose of the University of Idaho to cooperate with them and to carry on experiments to devise methods of extracting, in the most economical manner, the by-products of the woods of this region, and also to discover new uses and markets. This important work will be in the hands of an expert industrial chemist. In addition to these lines of work, we intend to conduct high-grade courses in forestry with laboratory courses in lumbering and secondary wood industries, and also a strong course in logging engineering."

The tentative plans for the new building, upon which Dr. Shattuck has been working for some time, call for a three-story building with a one-story annex for a practical saw-mill and wood-treatment laboratory. There will also be a building to contain the forestry pathology department.

The main portion of the building will be the auditorium. A suite of offices, drafting rooms, a museum, and auditorium and the wood-structure laboratory will be located on the second floor. The third floor will be the timber-testing laboratory, to test the strength of timbers, the wood products laboratory for making hopes, shooks, etc., the woodworking shop, a band saw, a motor and boiler, trimmers and grading table, a re-saw and edger, a dry kiln, the timber-preservation laboratory with vats for both the open and pressure processes, and a small pulp mill. The mill will be run by machinery.

The building will be erected as soon as possible. Both the University and the timber and timber men are eager to have the work begun.

Indoor Track Meet.

The second indoor track meet will be held on Friday afternoon, January 19, in Lewis hall and the gymnasium. This meet will be between the Freshmen and Sophomores, and will not be a general one, as was the first one. Neither will this meet be a handicap affair.

There will be seven events, as planned by Mr. Van der Veer. These are as follows:

- Half mile run
- Fifty-yard dash
- High jump
- 16-pound shot put
- Mile run
- Quarter mile run

Tag war, four men to a side and team not limited as to weight.

Mr. Van der Veer predicts a very close meet, and it is a toss up as to who will win. The Freshmen have good men in McGregor, Rowell, Randall, Buck Phillips and Gano.

The Sophomores should be strong with Scott, Downing, Whitten, Regan, Thompson, Gribble, Warren and Woolridge.

All entries are to be in before Thursday, January 18.

Strength Tests.

Miss Vivian Allen, '15, of Sandpoint, leads the women in the strength contests for the cup with 4385 pounds, and Buck Phillips, '13, of Lewiston, leads the men with 6700 pounds. This contest will close at the end of the first semester when the cups will be awarded.

In the first basketball game of the season Idaho was defeated by the strong Genesee five in a score of 17 to 11. The game was strongly contested from the start to the finish. The Idaho team was in the lead up to the last five minutes of play, when the visitors spurred and won out. The first half ended with the score ten to seven in Idaho's favor.

Coach Griffith sent Loux, Foester, Doyle, Kinross, and Nuffer in as the first lineup. In the second half Kinnison was replaced by W. C. Perkins, who was himself replaced by Zabel. Nuffer was replaced in the second half by Denning.

Genesee has a remarkably strong team for a high school. The three Wardrobe brothers, Gray and Keene, have played together for three years, and have worked up a team that would give any college in the conference a good game. W. C. had a hard time to defeat them Friday evening by a score of 32 to 20.

For Idaho Captain Loux and Foester played the best game. Loux made three field baskets on first throws. Foester kept Gray from making a field basket the whole game, while Gray was the particular star of the Genesees teams at Pullman. Foester played a scrappy game, but had bad luck in shooting baskets. Nuffer showed up well at guard and stands a good prospect of winning his letter this year. Kinnison was injured in the first five minutes of play by being thrown on his jaw, and was unable to play in his true form the rest of the evening, due to the injury.

For Genesee A. Wardrobe made three field baskets, and Gray threw seven baskets out of eight attempts on field. Zabel, the Genesee guard, fouled five times during the evening while Loux was a close second with four.

Cliff Edmondson, 11, refereed the game in a fair and impartial manner. The Genesee team thought they were getting the worst of it in the first half, but part of their objections were due to the fact that they did not understand about the ball being carried out of bounds.

The following is the way the two teams lined up:

**INDIANA**

Doyle
Kinross
Perkins
Zabel

**GENESEE**

Loux
Foester
Keene
Nuffer

Field baskets: Loux 3, Foester 1, A. Wardrobe 3, J. Wardrobe 1, M. Wardrobe 1.

Baskets from free throws: Gray 7 out.
ASSEMBLY

At the last Assembly, last year, Dr. Steiman's address on "The Canals in Mars" presented many interesting thoughts. Before the discovery of the telescope, little was known of the great planet, Mars, which is now studied with increasing success by astronomers. The earth was studied out from the countless millions of planets at the only place where life could exist. But why, since all the planets have not yet been subject to the same laws, should life be confined to the earth? There is life on the highest mountain tops, in all parts of the ocean, in the deepest submarine caverns—why should there not be life on the planets?

The different planets are in different stages of life development. The larger planets have not yet cooled to such a degree that they can support life. The smaller planets, however, are in a very advanced stage of development.

All the conditions necessary for the support of life—water, air and a suitable temperature—have been found to exist on Mars. The seasons on this planet are almost parallel to our own seasons.

A proof of the existence of water upon Mars has been found in the fact that the great snow patches at each pole melt each year during the summer months. These great snow fields change with the seasons, varying in size from a diameter of 2000 miles to the meridian spots on the planet. In the winter, the summer becomes smaller and in winter larger, thus showing the influence of temperature. The presence of water is indicated by the appearance of a blue fringe around the white snow during the melting season.

Large, dark areas have been found on Mars, which were at first supposed to be great bodies of water. There are now, however, thought to indicate the presence of vegetation, since they change in color with the different seasons, becoming a dark green during the summer months. Thus we know that there must be a temperature suitable for the existence of plant life. The growth of vegetation proves also that there must be air on Mars. By way of further proof of air, are the clouds which are said to be quite easily seen and of some frequency.

The only indication of human life on Mars are the canals. These canals are perfectly straight and form a regular systematic network. Some of the canals are over 3000 miles long. They start from prominent points and branch off in all directions. The fact that the canals lie in a perfect system, which no natural causes could have designed, proves that they have been constructed by man. Also in the two decades, the appearance of two canals not before present upon Mars, strengthens this belief.

In conclusion, Dr. Steiman said, "To believe that our own little earth is singled out as the only place where life can exist, is only an evidence of the colossal conceit of man."

The assembly closed with two selections by the Violin Quartet.

GRADUATE MANAGERS

MEET AT PORTLAND

(Continued from page 1.)

Interscholastic May 4—indeterminate.

Whitman College, May 11, at Moscow.

Washington State College, May 18, at Pullman.

Conference Meet, June 1, at Portland.

An attempt will also be made to get a meet with Montana, either on April 27 or May 25.

Idaho will have seven football games to play next fall according to the schedule. A game will be played with W. S. C., between the second teams, as was done last fall.

Following is the football schedule:

Lewiston State Normal, October 3, at Moscow.

Gonzaga College, October 12, at Moscow.

Washington State College, October 18, at Pullman.

University of Washington, October 26, at Seattle.

University of Oregon, November 2, at Moscow.

W. S. C. record teams, November 16, at Moscow.

Whitman College, November 28, at Walla Walla.

Ray Armstrong, '13, who was called some time ago, is back again.

Meryl Dunkle, ex-'12, now principal of the Genesee high school, accompanied the basket ball team to Moscow when they played the University.

Rex Curtis entertained at a party Wednesday evening. Two dozen young people were present.

A Moscow party had a jolly time at the Wednesday before vacation, some Zeta Delta boys took their friends out for a sleigh ride. After the ride for party returned to the Zeta Delta house and after having lunch spent the remainder of the evening in dancing.

Prof. Soulen was in Boise last week attending the Joint Teachers' Institute and State Teachers' Association. Prof. Soulen was one of the principal speakers on the program which lasted from Thursday to Saturday inclusive, his work consisting of a series of high school lectures.
