**Apartment fire hits home for firefighter**

Bryant J. Kuechle

A local firefighter knows firsthand how bad it is to lose your home and watch everything you have worked for go up in flames.

This was the case Thursday night when Moscow firefighter and University of Idaho employee Rocky Martinson watched his four-unit apartment building burn at the corner of Eighth and Washington Streets.

"It gives you more sympathy to people that have a fire," Martinson said. "It pretty much screws up your life."

Martinson has been a volunteer firefighter in Moscow for seven years and knew there was a problem when his lights started flickering Thursday night. Once he started to feel the heat, he quickly dialed 911.

The cause of the fire was electrical. Aluminum wires were installed in the '70s because aluminum was cheaper than copper. The fittings were copper and brass and because aluminum expands and contracts, a loose connection went to ground in the terminal. This type of problem is more typically found in trailers.

The fire began in the switching room where the circuit breakers are housed, which is right next to Martinson's apartment. "It cooked and baked, got some oxygen and took off," Martinson said.

The call was made at 7:09 p.m. Forty-one of the 76 Moscow volunteer firefighters arrived at the scene in one to two minutes. "They did a great job, got real aggressive," Martinson said.

---

**Residence halls reveal in GDI week**

Andrea Lucero

Ropes, oranges and toilet paper rolls pump the University of Idaho residence halls up for spring night. Last week the tug-o-war and relay races of GDI week allowed new and old members of the residence halls to get to know one another and to show hall spirit and pride.

We had excellent participation this year," said Alyson Mcdoniel, senior. "All of the GDI's are excited for a new year with lots of activities."

GDI week opened on Sept. 1 with halls performing skits and introducing mascots. On Monday the GDI's participated in tug-o-war and the men's halls courted the women's halls.

The courting is pretty entertaining," said Tracy Eber, programs coordinator for the residence halls.

"The men go to the women's halls and serenade or tell stories. The men are judged on the best and worst, most creative and overall favorite performance,"

The week concluded with a relay race which included orange rolling, passing lifesavers with toothpicks and passing toilet paper rolls. Men's halls courting the men's halls, Win, Lose or Draw, and a banana split social.

"The tug-o-war was the high point," Eber said. "More than 400 students participated. There was a co-ed tug-o-war game and two separate ones for men and women."

On Friday, the final night of GDI week, students gathered to watch the movie Children of the Corn and to receive awards from the GDI week events.

For the co-ed halls, McConnell won first place; for the women's halls, Forney placed first; and Graham was the winner for the men's halls. Winners accumulated the most overall points during the week.

"The turnout was much higher this year than in the past," said McDoniel. "There is a lot of energy from the residence halls this year."
Street Beat

A week ago today President Clinton ordered the shelling of Iraq with cruise missiles in order to quell aggression by the Iraqi government against ethnic Kurd enclaves.

The Argonaut asked students:

"If you were President Clinton would you have bombed Iraq in defense of the Kurds?"

"Probably not this soon. I would have waited to see if there was further aggression by Iraq against the Kurds."

— Jennifer Woods, junior in zoology

"I think I would have let it go a little longer and see what would happen. Yeah I would have sent some missiles at them to show Iraq a sample of what the U.S. can do."

— Jeremy Brunson, sophomore in philosophy and anthropology

"I might have bombed Iraq, but I've never really thought of it before. How far do you have to let them go before you do something about it?"

— Kelly Hart, junior in art

"I don't think I would have bombed Iraq because it's not really our business and Iraq has chemical weapons."

— David Fox, sophomore in geological engineering

"Fuck no! I don't support it, and I don't think cruise missiles are that smart to begin with. The U.S. does not need to use aggression when it has the economic might that it has. The only thing that military aggression does is balloon defense spending and take away money from women and children."

— Wally Brown, sophomore in history

Announcements

Career Services will offer the following workshops this week:

Marketing yourself with a resume and cover letter, today at 3:30 p.m.; Managing Interview Anxiety, Wednesday at 3:30 p.m. How to make a career fair work for you, Thursday at 5:30 p.m.; Introduction to UI Career Services, Friday at 11:30 a.m. All workshops are free but preregistration is requested. 885-6121.

Session interested in applying for this year's Rhodes and Marshall scholarships should submit their applications to Stephen Flores by noon, Sept. 27 at the University Honors Program, Psychology 102. For information, contact Flores at 885-6147. These prestigious scholarships provide generous support for two years of undergraduate or graduate study in Britain.

Ellen Stevens of the Committee to Hold Unfair College Killings will be speaking on the topic of beating tonight at 6:30 p.m. in the Administration Auditorium.

The UI Enrichment Program is offering prep classes for the GRE and LSAT. The GRE course will be held Mondays and Wednesdays, Sept. 18 through Oct. 9 from 7:30 to 9 p.m. in Nicosia 12. The LSAT course will be held Mondays, Tuesdays and Thursdays, Sept. 16-30, from 7:45 to 9:45 p.m. Both courses have a $95 fee and required tests. For more information or to register, contact the Enrichment Program at 885-6468.

MosCon will hold its 18th annual science fiction and gaming convention Sept. 13-15 at the University Inn Best Western. Contact Austin Wilmerding at (509) 334-4434.
‘Education candidate’ comes to Moscow

Jeff Olson

Dan Williams, Democratic challenger to Congressman Helen Chenoweth (R-Idaho), spent his Friday at the University of Idaho campus.

Williams voiced his concern over Chenoweth’s voting record in Congress and her mixed loyalties to special interests, House Speaker Newt Gingrich and her constituent in Idaho.

Williams opened his campaign for the U.S. House of Representatives in February of 1995 after having served Idaho Governor Cecil Andrus as Legal Counsel. Williams, claiming widespread support throughout the state, cited a recent poll commissioned by the Republican Party on Chenoweth’s behalf which “showed (him) seven points ahead” of Chenoweth.

At a noon luncheon, Williams met with student leaders to discuss his views of government, and his mission as a Congressman if he is elected in the November general election.

Williams said he sees campaign finance reform as his top priority, as he wants greater equity in the election process, and lessening the “overwhelming advantage of incumbents due to their access to special-interest money.”

Williams is also deeply concerned that the present Congress is not taking an appropriate view of education in its attempts to balance the budget.

“If we don’t (support education),” Williams said, “we are condemning ourselves and our kids to a declining standard of living. It is not in our best economic interest to employ people to get the education and the skills they need.

“The federal budget is much like your budget, get at home,” Williams said, citing the individual’s need to buy groceries and pay rent, while less imperative expenses could be temporarily curtailed. “You might have to stop buying CDs for a month, but education and job training will actually make us richer in the future,” he said.

Williams sees the need for education as one of the most significant differences between Congresswoman Chenoweth and himself.

Williams believes federal funding of higher education is necessary to keep Idaho and the United States competitive in the new ‘global economy.’

Williams wants the United States to “offer companies from around the world the best skilled, highest education work force in the world,” which he believes would drive companies to come to (or stay in) the United States despite our labor and environmental regulations.

Otherwise, Williams said, “companies would have no reason to locate their plants in a relatively high-wage country like the United States, they might as well go to Indonesia where they can take advantage of the lower standard of living by paying lower wages... and not have to worry about environmental regulations.”

Williams wants to encourage the nations of the world to adopt at least a minimum level of social, labor, and environmental regulations to make competition equitable in the opening of the global economy.

He is concerned that powerful multi-national corporations would exploit weaker, less-developed governments and worker populations which do not have the traditions of environmental and labor regulations.

“The problem that I have with this Congress,” Williams said, “is at the same time Newt Gingrich and Helen Chenoweth were voting to cut education, they gave the Pentagon more money than they asked for.”

Williams rallied against the pork-barrel spending habits and corporate welfare programs of both parties, especially for programs and projects which “are not needed, or wanted, but are just to support failing defense industry contractors.”

He cited the recent Congress’s decision to provide the Pentagon with 20 B-2 bombers at a cost of about $1.5 billion each. Williams pointed out that compared with Idaho State’s annual budget of slightly less that $1 billion in overall spending.

Web site contest open to students

Have a cool web site? Maybe you can win a $10,000 scholarship.

Vivarin is sponsoring a “Vivarin There’s No Place Like Home Pages 2.0” contest.

Full-time undergraduate and graduate students can participate.

More than 600 students participated in the contest last year. This year, there are two new categories to be judged: “The Most Superfluous Use of Java” and “The Best Tasting Eye Candy.”

Entries will be judged on creativity, design, context, navigability of links and value of the service provided.

For complete rules and an entry form, visit Vivarin’s home page at (http://www.vivarin.com/vivarin/) or send a postcard to: “The Vivarin O’There’s No Place Like Home Pages Contest,” 773 3rd Avenue, 30th Floor, New York, NY 10017.

Entrants must be 18 years or older and a U.S. citizen. Commercially sponsored sites are not eligible.
Report: Netscape, Novell considering merger

The Associated Press

MOUNTAIN VIEW, Calif. — Internet software companies Netscape and Novell Inc. have agreed to enter into a merger that could bring an end to a long-running battle between the two firms.

This agreement comes as part of an effort to combine resources and cut costs in an industry struggling with low profits.

Netscape, which owns the popular Web browser, has been facing increased competition from Microsoft Corp.'s Internet Explorer.

Novell, known for its Unix operating system, has been working to expand its market share in the enterprise software market.

The merger would create a new company called Novell Inc., with Netscape CEO Mitch Kapor as its chairman.

The deal, which is expected to close in the second quarter of 2012, is subject to regulatory approval.

It marks the latest in a series of mergers and acquisitions in the software industry, as companies struggle to find new ways to generate revenue in a slowing economy.

This is not the first time the two companies have considered a merger.

In 1996, they discussed the possibility of a combination, but the talks fell through.

In 1999, Netscape was acquired by America Online Inc., which later merged with Time Warner Inc.

Novell was acquired by Viacom Inc. in 2008, which then sold it to private equity firm equity firm Elliott Associates.

The merger of Netscape and Novell is expected to create a company with revenues of about $4 billion, making it the third-largest software company in the United States.

The new company will have a strong presence in the corporate computing market, with products such as its flagship Netscape Navigator browser and Novell NetWare server software.

The combined company will also have a large customer base, with about 15 million business and government users.

The merger is expected to create about 2,000 new jobs and result in significant cost savings for both companies.

In a statement, Netscape CEO Mitch Kapor said the merger is "a logical step in our evolution as a company and as an industry." He added that it "will enable us to better serve our customers and partners."
Scientists locate possible gene for diabetes

Biomedical Research in Cambridge, Massachusetts, reports the work with colleagues there and elsewhere in the September issue of the journal Genetics.

Scientists studied 217 members of 26 Swedish-speaking families in the Bonita region on Finland Island, near the border of Maine and Canada. The population in the area has long been relatively isolated, which would make a diabetes gene easier to find.

Each of the families had at least three members with type 2 diabetes, for a total of 120 diabetic participants. Scientists started with a wide-ranging scan of the genes and initially found no clues about the whereabouts of a gene.

But they got a break after they divided the families up by how much insulin family members produced in response to a sugary drink. That test measured one problem seen in type 2 diabetes, which is failing to make enough insulin to control blood-sugar levels.

The other major problem is failing to respond normally to insulin. In any given patient, either defect may be more prominent.

In diabetes with the lowest insulin response to the sugary drink, researchers found evidence that a diabetes gene lurks in a particular stretch of chromosome 12.

This same region contains a gene, not yet identified, for a very rare form of diabetes that resembles type 2 but strikes early, around age 25 on average. The Finns got the common form much later, at age 58 on average.

Lander said the result may mean that both forms of the disease are related to the same gene. A mutation that severely cripples the gene may cause the rare, early form of diabetes, while a less serious mutation might promote development of the common form, he said.

The notion that one gene could cause the two kinds of diabetes makes sense, although it's still only speculation, said Graeme Bell of the Howard Hughes Medical Institute at the University of Chicago.

Bell, who reported the apparent whereabouts of another diabetes gene in June, said he suspected that the gene Landers' team tracked is related to only a small percentage of common diabetes cases.

Nuclear plant shut down Friday

The company had been investigating the leak at the Clinton Power Station for some time and Friday had to shut down the plant after the leak exceeded the allowable limits and workers couldn't immediately repair it, company officials said.

The shutdown was done gradually, beginning overnight and lasting through most of the day Friday. There was never any danger to the public, said company spokesman Michael Monahan.

"It was done as an unusual event at the plant, the least serious of four emergency classifications. Angela Daugis, a spokeswoman with the U.S. Nuclear Regulatory Commission in suburban Chicago, said the agency was still investigating and would release a statement later. It is generally the company's description of the problem.

The seal is on one of two recirculation pumps for the water that cools the reactor's temperature.

That pump was leaking water, and Monahan said it would release a statement later. It is generally the company's description of the problem.

The company had been investigating the leak at the Clinton Power Station for some time and Friday had to shut down the plant after the leak exceeded the allowable limits and workers couldn't immediately repair it, company officials said.

Bomb-proof airplanes may soon be possible, at a price

**Associated Press**

MIA MIA — A bomb explodes, severely damaging one wing of a passenger plane, but an on-board computer immediately adjusts the engine thrust and flaps and the jet lands safely.

On another aircraft, flames erupt in the cargo hold. Because of a special foam insula-
tion, the fire is contained and all lives are saved.

The technology that will allow planes to resist such catastrophes are already in testing and could be available by decade's end. But they won't come cheap. To offer such flights, airlines may have to sacrifice valuable cargo space, pay more for fuel.

"This hotline line is costly...but what we are trying to do is protecting the flying public," said William Hassler of Galaxy Scientific Corp., an Atlantic City, N.J., company that makes luggage containers it says are bomb-proof.

America Online ordered to stop blocking 'junk' mail

**Associated Press**

PHILADELPHIA, Pennsylvania — A company accused of flood-
ing computers with unsolicited e-mail advertisements hailed a judge's order that America Online stop blocking its transmissions.

"America Online has violated the civil rights of its members and has violated our rights to send e-mail through the Internet, which AOL does not own," said Sanford Wallace, president of Cyber Promotions. "In the post office, this would be considered a federal offense.

Wallace sued in federal court Thursday, the day after America Online, the largest provider of online services, announced it had blocked five sites serving as clean-

FIRE — FROM PAGE 1

"They always do an excellent job providing the community and university with fire protection," Fire Chief Phillip Gatlin said. "This is our first working fire we've had since school started back up."

The firefighters ran into a problem with the roof. "It is originally a cedar roof with metal roofing over it," Gatlin said. The cedar began smoldering, so the metal roof had to be cut open to let the heat escape.

Minutes was the only person present at the time of the fire and has since moved to a place to stay. He is not the only Moscow firefighter that has been dealt this blow.

"We had a firefighter that had his trailer burn up," he said. "It happens to everybody."

About $40,000 in damage was done to the building. No plans for the future of the complex have been made. The owner of the building, Charles Thompson, was unavailable for comment.

Let me begin by stating that the Argonaut has been making an honest effort to deal fairly with the Greek System this semester. This is partly because I, as Editor in Chief, believe that people ought to be looked at for who they are, not what group they belong to.

However, I have encountered a problem in the past few months that I cannot contribute to anything but the existence of the Greek System. It began when my apartment moved into an apartment complex that happens to be on campus and situated right in the middle of Greek row. I asked the previous tenant if she had a lot of problems with noise. She said no. But she lied.

During the summer various loud noises would wake me from my apartment and disturb my sleep. Although these disturbances would come at unpredictable and inconvenient times, say midnight or 1 a.m., I just buried my head under a pillow and prayed for it to go away. But it didn’t.

I waited through Rush week, and even the week after with as much patience and civility as I could muster. I waited through the fraternity across the street singing really bad country western songs as loud as they could at 2 a.m. on a week-end. It’ll soon be over, I rationalized.

But it wasn’t.

There were many more incidents.

Many more sleepless nights where I woke exhausted from complete lack of sleep the night before.

Sunday night was the last straw. I woke to the sound of every sordidity on Elm Street screaming as loudly as they possibly could. Why? I have no idea. I only know that it started at 2 a.m. and didn’t end until 3.

I was so incredibly angry I think that I could have done something entirely irrational and very illegal. I thought of ways I could get back at them. I thought of ways to block the noise, but there are none. There is just no way to keep the sound from my room. The sheer magnitude of the decibels is enough to cause things in my house to shake. That’s why I’m writing this to give you fair warning.

I have lost many nights of much needed rest to you, Greek people, and I’m not going to take it any more. I will call the police. I will drive my car onto your lawn and blare my horn and shine my head lights into your rooms at 4 or 5 in the morning. I will throw things at your windows. I will plaster your houses and your cars with flyers that go into great detail about how inconceivable you are.

I am a patient person. If you are having fun until midnight and making enough noise to wake the dead, no matter what day it is, I don’t care. If you are up until all hours of the morning on a weekend and banging gongs and cymbals I don’t care. But I and other people are here to get an education, which is hard to do when you’re woken up because you’re too tired in the morning to get up.

So please, have a little respect. I kept my mouth shut within reasonable parameters. I don’t put my speakers outside for everyone else to listen to and I’m quiet by midnight on school nights. I don’t think it’s too much to do, and I certainly don’t think it’s too much to ask. So please, have just a little bit of consideration for other people, people shown more than enough for you.

—Corinne Flowers

Choose your own fish

Campus Christians create captivating cultism

I’m not the only one who’s noticed the Campus where Christian Fellowship on every couple of weeks.

This lack of religious privacy is abhorrent. It’s like televangelism, but you can’t change the channel on these people. I remember when I went to the Kilbourn Dome when we were first moved in. Every 10 steps I took there was another person asking me if I’d signed up for Bible study. At first I said “No, not interested.” After a while, though, I just started telling them that I was already a Christian. You know, it’s pretty hard to iritate me to submission, but I knew I was best.

That’s bullshit. If people are into God and stuff, then cool, but it’s everybody’s right to walk around the campus and feel like a cursed heathen. You’ll need an organization to make your personal thoughts on God and eternity valid. Besides, as it says in first Corinthians: “But let a man examine himself.”

These people are totally counter-productive to their cause anyway. Here’s a tip: If you want people to join up, don’t have everybody thinking you’re a bunch of fanatics. It’s hard to really want to hop on the bandwagon when you’re everywhere you look.

I’m definitely not the only one who’s noticed this. The idea for this editorial was given to me by someone, several of who were Christians.

I remember the most recent run-in with them. I was smoking a cigarette and walking along in contemplation when I rounded a corner and there they were. I felt a cold sweat break out my forehead as they asked me if I’d signed up for Bible study (screw those). I thought this was too much for the Bible, I wanted to be able to walk out back of Wallace and smoke a cigarette without having to discuss my spirituality.

Not that I worship Satan or anything, but my religious orientation is my business, and I don’t need someone else trying to change it for me. I figure that people who want to get together for ice cream socials and talk about Christ will do so, and more power to ‘em. I’m happy that they are going in hell with me — but if I want to suffer eternal torment then by God (excuse me) that’s my decision.

I figure religion is something that should be taken on a personal level. I don’t need a group of like-minded people to reaffirm my spiritual beliefs. You’ll need an organization to make your personal thoughts on God and eternity valid. Besides, as it says in first Corinthians: “But let a man examine himself.”

I was raised in a small rural community. I always knew there had to be more out there than the town famous for being the birthplace of television. And, like many others, I found that something more was college.

My small hometown was very religious. However, I happened to be a member of the prominent religion. It was hard being in the minority but I survived.

The hardest part was the freedom to express my beliefs. I’ve never been much of a shy person, so when I shared my beliefs, I was often severely chastised. But I was still brave enough to tell people what I thought, even if it went against them or their beliefs.

Yet always listened to those who put them up, I too have respected them for having their own opinion as long as they respected me for mine. Respect is a two-way street, but I could write a whole other article on that.

Well now comes the explanation of the more is that I found in college. I found the freedom to express my beliefs more openly and with more acceptance.

With the diversity of students on a college campus, along comes thousands of beliefs or disbelief. Therefore, knowing nearly everyone is going to have differing opinions, students are more willing to listen to, respect, and for lack of a better word, honor others’ beliefs and opinions.

And I’m sure many of you are wondering what this has to do with growing up in a religious community. Well, like I said, I was often chastised for expressing my beliefs.

However, a mere 10 miles away from where this religion is little community, I’m free to express my beliefs. Free to express without chastisement — now there’s a concept. I’ve even got a prime example for you on the differences of that concept between my little hometown and college life.

Because of my Christian upbringing and faith, I enjoy the Christian symbol of the fish. I must often found on the Greek coat of arms and I enjoy pointing them out to other people and yelling “Fishy.”

Now there are people who believe in the evolutionist Charles Darwin, and that’s their right as Americans. Well, those people also have a fish, with feet coming out the bottom and Darwin written inside.

In my living arrangement, there are two doormen with Darwin fish.

That’s the freedom of those who put them up. I too have the freedom to put my “Fishy” on the door. It’s part of that freedom that I was missing and deprived of back home.

Quite often no words need to be said. It’s the actions that speak the loudest. It’s all part of the more that was out there. College not only expands the mind through classes and learning, but also through allowing students to be themselves and have the freedom to express themselves and their beliefs.

So the next time someone asks what you learned in college, you can proudly reply. "I learned to accept me for me and others for being themselves."
Bomb-cooking recipes located on the Internet

No, really

Lisa Lannigan

I'll give you a topic: building bombs via the Internet.

Now right now: The Argonaut, ASU and all of us here at the University of Idaho in no way condone bomb building, terrorism or any illegal activity. In fact, we suggest you don't even go to these pages or look at this stuff. Just stay no.

In today's fast-paced world of international terrorists and hometown heroes, it's only chic to know how to build your own bomb out of household cleaners and drain pipe.

Where can you find this hip, happenin' information? Why, off the Internet, of course!

The cover of every major newspaper in these glorious United States today has something about someone building a bomb and using it to blow up planes, topple Olympic towers and scare the bejesus out of us simple, God-fearin' folk.

Finger-pointers have to blame someone and it might as well be today's best and brightest toy.

But can you really find out how to mix explosives, set time fuses and kill with your bare hands on the World Wide Web? You bet.

Now, just for kicks, I started searching at YAHOO, where all fun things are found. There are several great pages under the heading "bombs" such as Tom's Pyrotechnic Page which tells you all about fireworks and explosives. This page starts out with a stern warning that "pyrotechnics can be dangerous." It then goes on to describe how to make tools and chemicals to use when building your "fireworks."

The next obvious topic to look up would be The Anarchist Cookbook, which has no less than 20 listings on YAHOO. There is a place you can order the book from over the net for $15, but why do that when you can download it right there! I did, in fact, find an entire listing of click-and-choose pages including, but not limited to: "ways to send a car to HELL," napalm, auto exhaust flame thrower, egg-based gelatine flame facts, nail grenade, "toy that will kill," yuppy marijuana recipes, European credit card fraud, and fun with shotgun shells.

Part of the bomb-building page says, "Most people are not aware that a volatil, extremely explosive chemical can be bought over the counter. So there it is. As a public service to you, we have verified that you can find out how to blow things up over the Internet. You can also find out how to do a lot of other illegal stuff, too. But is someone going to actually do this stuff if they just see it on the Internet? Probably not.

Yes, there are those crazies out there that are dying to get their hands on all this information and may, although we hope they won't, use it to do their own dastardly ends. However, information like this is just as easily available through other means. A person who really wants to do this will find a way, Internet access or no Internet access.

Now that you know this information is available, it's up to you to do something. Is it a good idea to have bomb-making information right there at any 13-year-old's fingertips? Probably not. Should the government go and spoil any joy and spend lots of money to close this dark web? They probably couldn't even if they wanted to.

Should you build a bomb? NO! DON'T EVEN THINK ABOUT IT!

I suggest you take your curious and troubled mind to a more tranquil place, such as the yoga or Buddhism home page. Stay away from those explosives. Get help.

Talk amongst yourselves.

Career Fair
September 18, 1996

Letters to the Editor

Elite should hunt for parking, too

In the Staff Committee Minutes published in the Sept. 6 Register — the University of Idaho Employee Newsletter — it was reported that the same recommendation from a campus committee was forwarded to the administration three times and vetoed each time.

Campus committees are comprised of faculty, staff and students who are elected to represent the campus community. Their recommendations represent our interests, opinions and input.

To show respect for a campus committee and those who represent, administrators should explain the reasons for a veto. And those reasons should be shared with the rest of us.

Parking Services is an auxiliary service reporting to Financial Vice President Jerry Wallace. It would be a courtesy for Mr. Wallace to explain to the campus community why the parking committee's recommendation has been vetoed the past three years. Most of campus now believes that the reserved parking spots are protected as "park for the felony." Most also believe that those "elite" justify paying an additional charge for such a desirable and cherished gravity.

$140 that they (the privileged few) now pay should allow them only the same kind of $140 "hunting" license other staff are allowed to purchase.

Elvis wouldn't make good sheriff

Jeff Crouch, Latasha County sheriff candidate, is currently a Moscow police officer with a master's degree in public administration. As Latasha County sheriff he would provide more help for the back because he could do both the police work of sheriff and the administrative work.

His opponent, K. Pitt, has stated that he could not do the police work because of a disability but could do the administration. He also has boasted his ability to impersonate Elvis — which he does in an act as a sidekick.

How can a man with a disability impersonate Elvis — yet claim he can't do police work? We don't need four more years of impersonating. Vote for Jeff Crouch as sheriff of Latasha County in November.

— Rod Bode

Lefties taking over

I came to a frightening realization here at the University of Idaho and perhaps this applies to the rest of the nation.

Left-handed desks can be seen taking over the classrooms of the Administration Building. Groups, clubs and politically-active campus organizations have surfaced, seeking a voice in city, state, university and national government. Even students and catalogues for the left-handed have been increasing on this, the last stronghold of right-handedness, North Idaho. We, the remaining right-handed, need to take action to stop the spread of this menace to society, to uphold those values we hold dear.

Waldo Kyler, a newcomer to Idaho, has begun fighting against this threat to our communities, our public schools and even the holy institution of marriage. Left-handers are seeking to corrupt these last vestiges of decency, but we, the moral majority, will take no more.

Kyler is concerned for the social consequences of the unnatural union between two lefties, and the risk of their corrupting any children such a union might yield. Kyler is the founder and president of the Right-handed Citizens Alliance which is currently supporting a petition to draft a Constitutional Amendment which would stop any legislation which would protect these social deviants.

Kyler has been cited as saying that we must "protect our communities from this very real threat" by keeping the "lefties" from gaining the special protection they are seeking.

A spokesman for the Left-handed and Ambidextrous Students Association comments, however, the LASA is not seeking "special rights," but only quality and freedom from the centuries of persecution, citing the RCA's current petition.

TUESDAY, SEPTEMBER 10, 1996
Road woes continue for Vandals

Kindra Meyer
Staff

Idaho's volleyball team returned this Sunday after finishing off an intense eight-day road trip. This excursion resulted in six consecutive victories concluding with a sweep of the Wyoming Invitational Tournament Saturday.

Friday morning's game against Chicago State was a virtual must-win as UI scored 25-2, 15-3, 15-3.

"They were just really inexperienced and young," UI assistant coach Debbie Martin said. "We were able to just go after them."

Although the games were short and sweet, they were valuable to the Vandals. With a less-competitive team, many inexperienced players were able to get on the court and get substantial minutes. One such player was backup setter Lani Kim who racked up 17 assists.

"They got two good games under their belts," Martin said. "We were able to go out there and work on a lot of things."

Offense was the key strength for Idaho, and the downfall for CSU. The gold and black outfit CSU in each set - 333-309, 348-313, 333-306 - putting away 30 kills to their opponent's mere 11.

Louisa Kawulok led the Vandals attack at center with eight kills and Jessica Moore added five. Reserve Shalynie Lien had a hit with two blocking downs four kills in four sets.

Excited and ready, Idaho showed up Saturday morning with a mission - to take the trophy. The first obstacle in their path to victory was Texas-San Antonio, who were taken down in three games. UTSA played tough and stayed focused throughout but eventually lost 15-9, 15-9, 15-9.

Jeri Hymas continued her reign as a threat to all blockers. She led the team in kills with 15, closely followed by Kawulok who had 12. Kawulok hit .429 and was down on defense, digging up 14 hits. Idaho's offensive attack was improved with the play of Kyle Leonard, Beth Craig, and Jessica Moore. Leonard put away eight kills, Craig and Moore each added seven. These three also combined for a total of 26 digs.

Saturday night played our home team against the host of the invitationals, the University of Wyoming, playing for the championship. Expectations ran high and the Vandals knew they would have to play in top form to defeat Wyoming on the road.

Under the impressive play of Kawulok, the Most Valuable Player, UI routed the Cowgirls in Laramie to earn first place. In an intense four-game match, the Vandals proved they could focus and get the job done. When it was all said and done, the scores ranged out 15-8, 15-17, 15-12, 15-10.

"It's a huge win for us," Idaho Coach Tom Hilbert said after his team's victory gave them a 6-0 record to start the season. "They really improved tonight. They were mentally tough at the right times."

Kuma Club takes IM co-ed softball title

Byron Jarnagin

The Intramural Co-ed Softball Tournament concluded Sunday afternoon with the championship game. Kuma Club faced off against Double Stuff in a game that was decided by the fourth inning.

On a hot, summery day at Guy Wicks field, fans lined the outside of a tone softball diamond waiting to see who would be crowned the champ. Each team definitely came out to play. The Kuma Club had the man and woman power that put them over the top in the first inning.

Kuma Club drove in 10 runs in the top of the first inning putting Double Stuff in a must-score situation right from the jump. "The Club" determined to make its opposing team work for their outs, walking at least three batters consecutively in the first. In co-ed ball, a walk with two people on base drives in a run because a walk in this game in a two base runners. At the top of the second inning, the problems and runs began to mount up again for Double Stuff. Kuma Club increased its lead by 13 runs, scoring seven in the second inning. Double Stuff, who needed some runs badly still three innings away from scoring any more, found itself run up on in their last run of the afternoon upping their total to five, and narrowed that lead to 12.

At the bottom of the second inning, behind the powerful Kuma Club is 12.

Double Stuff batted to build some more, and took the field in the second inning, but was unable to put any runs across the plate. With their bases loaded, they were unable to put any runs across the plate.

Their own performance in the bottom of the third would not bring them any closer to the dominating Kuma Club, as Double Stuff chalked up a big "goose egg" in the books giving spectators the impression victory was out of their reach before the inning was even complete.

Kuma Club further padded their lead in the top of the fourth, which would end up being the last inning for the team, due to such a top-sided score. The "Club" put three more runs on the scoreboard in the top of the fourth closing the book on a less-fortunate Double Stuff. As suggested by the performance of both teams in the top of the first, Kuma Club was in claim victory by the end of the inning.

The final score found Kuma Club edging Double Stuff by a score of 21-5 in less than five innings.

The girls are really exceptional softball players, and we have all played together in one form or another, so this was a co-ed or a women's league," said Kuma Club team member Kirk Kolb. "We just try to have a lot of fun which brings our team together, and again our team really is only seen as our girls.

"We had so many enmies in the first inning giving them a ten spot, they made it overall difference," said Kuma Club member Dan Elicks. "Everybody was getting pretty desperate after the first inning, so from that moment on we all kind of decided to have a little fun with it.

"IM softball resumes next semester in the spring, but get ready for all of the IM football games this week, plus ready ultimate Frisbee and soccer starting next week.

Azztec.

Things couldn't get worse for the Vandals. Jerome Allen took the Aztec kick from the Vandal kick 1-yard line and returned it two yards (bad field position). Joel Thomas then was shuffled for a 1-yard gain (indicative of the Azztec running game). Fien then threw an incompletion pass intended for Joel Thomas (second down and long). Then when an offensive possession couldn't look more gruesome, it went worse. A Fien pass intended for Robert Scott was intercepted by Eric Lewis at Idaho's 24-yard line (one of four interceptions on the afternoon).

"We made mistakes that killed us in the second half," Tomney said. "You just can't do that against a team like San Diego State.

The Aztec offense then took over. Watson ran the ball up the left tackle and into the end zone after gaining 18 yards on the previous play — giving the Aztec's 17-3 lead and the momentum.

Fien's nightmare continued. On the Vandel's next possession, Fien was again intercepted by the Aztec's, this time James Heggins enjoyed all the glory. SDSU capitalized on the Vandal turnover with a Holt 34-yard field goal. Azztec 20, Vandal 3.

SDSU dominated from the third quarter on out. And while Fien had intense pressure put on him by a swarming Aztec defense, Blanton was literally untouched most of the night.

With a little more than five minutes left in the fourth quarter, the Vandal players caught-up and looked to gain momentum. After a pass interference call and a 6-yard Fien pass to Griffin, the Vandals were in a position to score. A 5-yard touchdown pass to Robert Scott and a successful two-point conversion run by Joel Thomas put the Vandals within 16 points of the Aztec lead.

SWEEP

Senior middle blocker Kawohi dominated the center and powered 15 kills with 15 digs. She was named MVP for the two-day tournament and definitely earned her MVP as a senior. Scott provided 21 kills against the Buffaloes, and with 25 kills, bringing her total to 31. Scott was a big contributor with 20 kills, finishing the week with a .774 hitting percentage.

Lynn Hyland had 62 assists which brought her total for the week to 235. She also had 14 blocks and joined Kawohi as an All Tournament team selection.

Defense was still a key concern in Hiltber's eyes but definitely improving. In addition to Kawohi's 15 digs, Scott had 11 and Hyland had 17.

The Vandals encountered some rough waters during the match with UW, whose record falls to 3-4.

Following the second game, both teams retired to their locker rooms for the break period. No one notified the Vandals that it was time to return, and they were given a nasty surprise when they came back in the third game. After that rough start, they fell to 0-6 before Hilber called a timeout.

"I told them, 'We're officially under some adversity now,'" Hilber said. "They just sucked it up and really played.""

The Vandal's 3-4 record and did end up losing that game but bounced back to win the third and sent the Buffaloes singing the blues with the match victory.

This weekend was Idaho's first home game. The Branggan's/McCary Plumbing Vandals Volleyball invited the Aztec, a member of Eastern Washington University, The University of Connecticut and DePaul University.

These plays. own many
Mary’s was proven
Dad’s
She

They have proven that they can compete on the same level as other quality teams in Division 1-A, but if they want to beat these teams they must cut their own turnovers and begin limiting their opponents into turnovers.
In their first two games, the Vandals have found two of the top defensive teams in the stronger Western Athletic Conference. What appeared them was Mary’s. Their eight turnovers, four interceptions. On the other hand, the Vandals have only forced five.

The defense, filled with both hitches and big play makers, will eventually make the plays. The offense, however, will need to begin executing better and following the basic fundamentals of playing the game with the usual West.

Quarterback Ryan Fain has passed for 923 yards and 10 touchowns against 20 interceptions. Slick ball or maybe Quick hands? The pivot is the

Teams lose football games all the time, but there is usually one factor that comes into play when equally matched teams go head-to-head and one great moment out of the water — turnovers. The Vandals committed four turnovers while holding San Diego State to 10 points in a 40-12 victory.

In an effort to catch the Aztecs at San Diego State, Idaho recently suffered the amount of Ryan-Fain not being able to produce much with their ground game. As the end of the game, freshmen one second final time recording 33 of 31 completion, but that good in a record going to loss the best wide receiver, records are not on the side of the winning team.

Last time against Wyoming, Fain had a record-breaking performance. He still the Vandals filled with a veteran major factor may be the effectiveness of the running game. He has a solid running record when their running game falls below 100 yards per game. Against 10, 11 Wyoming coached Vandals, the Vandals gained only 89 yards. Three ground-gaining teams could have three goals: to find and work with the teams so that they can create some momentum.

—Nate Peterson

There’s no place like home. (Kbbie that is) is a reassuring theme that will hopefully enhance the Vandals winning percentage this weekend, as they host Division II St. Mary’s. Ryan Fain has passed for about as many yards as miles the Vandals have traveled in the last two weeks, only to find both leaving them looking for answers as they finally return home to host the Gaels in what could be viewed as David versus Goliath.

The Vandals running game is suspect, so teams are anticipating the pass, as shown by the four interceptions thrown by Fain last weekend. Back on the turf Idaho will run on all cylinders as theylobber an understated St. Mary’s squad 58-14.

The Sky Fisherman
Soft Cover
ISBN 0 312 14738 4
pp 304
$13.00
By Craig Lesley

Easily coined as a coming-of-age story, Craig Lesley’s brilliant work The Sky Fisherman contains as many unpredictable elements as the river which flows through it. Lesley establishes characters with ease, embellishment and energy. His language suits the people he creates, the landscapes described and, most importantly, the town that combines both entities. He does not shy away from intriguing subjects like death, mourning, sorrow, lost dreams, prejudice, love, aeronauts and murder.

Told through the eyes of young Culver, the protagonist whose father was “lost” on the River Lost while fishing with his uncle, Lesley allows him to much more than he should but retain a striking amount of innocence throughout. Although Culver admits to flashes of his future such as, “Deep in the narrow of my bones, I felt that nothing was going to turn out as we had hoped, and I felt sick for all of us, especially my mother.”

Culver’s mother, who facilitated the move back to Gateway, the place of her husband’s death and the home of his brother, Jake, is sensible, likable and sometimes surprising. The strength she needs to leave her second husband, Riley Walker, is most revealing daily in a cafe which served bad cottage cheese and sour pears.

Culver doesn’t mind the new surroundings. Riley walked his family from one railroad town to another on his general decent with the Union Pacific Railroad. Lancing in his last two dog town, losing his adopted son finally drives him over the edge, causing him to death to the town before turning it into a train station.

The future looks bright for Culver and his mother, they both have jobs, they have their own house and they are not old. Riley, they believe. Culver works at this Uncle Jake’s adventure outfitting store and is often left in charge when Jake is leading fishing trips with the “dudes.”

The colorful characters who grace the threshold of Jake’s store are as interesting as their names and stories. Gigantic Gabriel Webster, “Gah,” is the station manager for the local radio station. He continually tries to sell advertising and consistently sees ways for the town and businesses to grow.

Buzzar Meeck is a crop duster who “swoops so low he’s got to hop to clear the barbed-wire fences.” Smity St. John is a night watchman and guber mixer for the noisy wood mill. Seaweed Szwansen is a retired chief petty officer in the U.S. Navy but has trouble with the clock and “actually spent two extra years in the Navy before realizing he could retire with full pension alter twenty.

UI Bookstore to host book signing

Craig Lesley, author of The Sky Fisherman, Winslow and River Song, will visit the University of Idaho Bookstore Thursday, Sept. 13, at 3:30 p.m. He will read from his latest work, The Sky Fisherman, sign books and attend the reception to follow.

The language and descriptions in his work reveal his love for the Pacific Northwest, where he is a lifelong resident. The UI Bookstore is proud to honor this local man and his latest endeavor.

His book can be found there, but don’t count on finding many copies after people find out how wonderful the text is. It cleverly combines a human story with nature, art, innocence, scandal and life. For those with a love of rivers, either rafting or fishing, this is a must read. For others who enjoy a great, energetic story, this is also the book for you.

Although through the. It will be wonderful to hear Lesley bring his characters to life as he reads. This is a great opportunity as you will be able to listen to the narration and understand his words and his sources for the wonderful characters he brilliantly create. (see review p. 14)
FISHERMAN  *FROM PAGE 13*

By "He blamed this on "too many trips across the international date line."

All of these characters also have mugs hanging in the Oasis cafe with nicknames labeling their coffee cups... (Culver) enjoyed trying to match the customers with their colorful monikers: Big Joe, Babe, Grasshopper, Heavy Duty, Short Stack, Skook. Often Culver walks alone from the cafe in order to "study the town at night and consider how I fit in it."

Just as the colorful characters cannot be ignored, the powerful force of the river takes on characteristics of its own. Culver becomes a man on this river by not only challenging the rapids which claimed his father's life, but also pulling his first dead body on the Last and almost getting pulled under by a panicked tourist. Jake contends, "There's a fool born a minute and only one dies a day."

Also surging through this novel, are the beliefs and teachings of generations. Jake and Culver's father took his boys fly fishing on the river frequently. Jake remembers, "Whatever he knew about the river, that's what he saw in the sky...that's the Sky Fisherman. Those stars closest to the mountain are the big hoo's. Straight above is his vest, and the little curved line of stars is a pipe jointing out his mouth. That long row of curved stars makes up his fly rod. From the deep bend in that rod, I'd say he's hooked a daddy." Jake passes on to Culver important family history and respect for the nature surrounding him.

Another current swirling in this tale is Native American mythology, beliefs and humor. Gateway is situated next to Hollywood, a reservation, which is also plagued with scandal, murder and suspicion. The tribal policeman, Billyon Braided Head, befriends Culver due partly to his relation to Jake and also his display of bravery.

Unfortunately for the characters, there is also a deep under-flow which pools at the inhabitants, sometimes cursing their dreams forever. Culver witnesses extreme drought which results in unbelievable fires and more men lost.

Lesley's previous books, Wannskill and River Song are equally as intriguing books. His ability to establish characters and set of storytelling are phenomenal. Even those not thrilled about fly fishing can enjoy this latest effort and those who are will have an enhanced read. Lesley also has a lifelong resident of the Pacific Northwest and currently lives in Portland, Ore., which is obvious from his poignant titular descriptions.

The Sky Fisherman is available at the University of Idaho bookstore. Craig Lesley will also be visiting the bookstore Thursday, Sept. 12 at 3:30 for a reading, book signing and reception.
