Assistant football coach returns to work

By Nancy Poppino

University of Idaho assistant football coach Mike Bruns, who was sentenced last week to five years in federal prison for bookmaking, is returning to the Portland (Ore.) area as a graduate assistant coach at Pacific Lutheran University.

Bruns, 36, was sentenced Wednesday by U.S. District Judge Robert H. Jones Jr. in Seattle for making 250 illegal bets.

Bruns was the 30-year-old football coach at Pacific Lutheran when federal agents arrested him in 1978 and seized more than 3,000 betting slips.

A federal jury convicted Bruns last month after a two-week trial in the U.S. District Court in Seattle.

Assistant football coach returns to work

P rosecutors are expected to file a motion today in the trial of three men charged in the murder of law student John Brice.

The decision in the trial of three men charged in the murder of law student John Brice is expected to be made today after the defense team presented its case.

The men are all facing murder charges in the death of Brice, a 19-year-old student at the University of Idaho's College of Law.

The Argonaut is a student newspaper at the University of Idaho, owned and operated by the Student Publications Board, a constituent of the Student Government Association. The university’s student newspaper has existed in various forms since its inception in 1893. Initially known as the Idaho Pioneer, and later as the Idaho Daily Argonaut, the newspaper is now called the Argonaut. It serves as a forum for student expression and a means of fostering creative and intellectual growth. The Argonaut is a member of the Associated Collegiate Press (ACP), an organization that promotes student freedom of expression and provides resources and support for student journalists. The Argonaut is distributed to students, faculty, and staff on the University of Idaho campus in Moscow, as well as to alumni and friends of the university. The Argonaut is published weekly on Wednesdays during the fall and spring semesters, and monthly during the summer.
Bush calls on judge for homeland security post

by William Douglas and
Sasha Harlow (UPI)

— In a surprise move, President Bush nominated Michael Chertoff, a federal prosecutor and former high-ranking Republican official, to be homeland security chief.

Chertoff has a reputation as an agency chief, a prosecutor who went after crooks, a president and a terrorist.

In taping Chertoff, Bush selected a highly respected public servant who spent most of his career managing and enforcing various laws and overseeing such things as the borders of Homeland Security. The two-year-old department has 25,000 agents and 100,000 employees and has been criticized as a difficult place to work.

However, he brings legal expertise to the job. Chertoff ran the Justice Department's criminal division from 2001 to 2003 and helped craft the Bush administration's strategy following the Sept. 11, 2001, terrorist attacks.

"On Sept. 11, 2001, I joined thousands of law enforcement agents in responding to the infamy. time in the history of our nation," Chertoff said Tuesday. "I confidently promised that I'd be proud to stand again with men and women who form our front line against terror."

Chertoff, 51, is Bush's second nominee for Homeland Security Secretary since Sept. 2001. The New Jersey-born, former New York City Police Commissioner Bernard Kerik, who had been under consideration throughout the Bush administration, had not yet been nominated by the President.

"He's our most trusted investigative tools," said Michael Chertoff, director of the Homeland Security Department's immigration and border security division.

"If he wins, we have no border security," said Rep. Peter King, R-N.Y., whose district includes New York City. "We have no border security." Chertoff's selection raised eyebrows among immigration and homeland security experts. Chertoff is not well known among the immigration and border security experts.

"This is a namesake," said Rep. Peter King, R-N.Y., whose district includes New York City. "We have no border security." Chertoff's selection raised eyebrows among immigration and homeland security experts. Chertoff is not well known among the immigration and border security experts.

"I'll be proud to stand again with men and women who form our front line against terror." -- Michael Chertoff, Sept. 12, 2001, at the Department of Homeland Security.

The president praised Chertoff's qualifications.

"He's our most trusted investigative tools," said Michael Chertoff, director of the Homeland Security Department's immigration and border security division.

"If he wins, we have no border security," said Rep. Peter King, R-N.Y., whose district includes New York City. "We have no border security." Chertoff's selection raised eyebrows among immigration and homeland security experts. Chertoff is not well known among the immigration and border security experts.

Student sued for millions of alleged spam e-mails

By David Michael

Pittsburgh Post-Gazette

MELBOURNE (KRT) - Ryan Pitylak is no stranger to the mail: He's been getting millions of spam e-mails offering mortgage refinancing, warranty replacement and anything else that can be sold.

Pitylak built a successful business in paper shredding in order to sort through the mail and make money from the shredded paper filters and clamped envelopes that he recovered from the mail. He says he was recently the victim of identity theft, and has been the target of millions of spam e-mails.

There have been reports that he made a minimum of hundreds of thousands of dollars from shredding, but Pitylak says that he made a profit of $5,000 to $10,000 a month, and that he lost money on the job.

Pitylak said that he is working to make sure that people can have their mail delivered without having to go through the hassle of sorting through the mail himself.

According to a Web search, Pitylak was age 14 years old when he discovered that he could make money by collecting and destroying the mail that was being delivered to a local house.

When you open up the e-mail, you see something different from what was advertised in the headline, that makes it a violation of both state and federal law, said Albert, who said Pitylak is just a normal boy.

"Our organization is really interested in working with the law enforcement to stop these spam activities. It's really important to understand that this is not just a problem for individuals, but a problem for everyone in the community," Albert said.

People say that they're interested in the mail because it contains information that they can use.

When you receive a spam e-mail, you see a message that says "You have received a message from your bank." The message then tells you to open a link to see the message.

The message is just a link to the spammer's website, which is designed to look like a legitimate site.

The spammer tricks you into clicking on a link that downloads a virus onto your computer.

The virus then sends your personal information to the spammer, who can then use it to steal your identity.

But the spammer will not send you a message about how to stop the spam.

The spammer will just tell you to delete the e-mail, but it's not the best solution.

The best solution is to report the spam to the spammer's network. The network is responsible for sending the spam, and it's the best way to stop it.
Today's scientists rarely fit yesterday's egghead image

By Robert L. Strenken

(RK) - Officer Thermill Gibson was patrolling the University of Idaho campus in Moscow last month when he was hailed by a woman walking alone on a sidewalk near the library.

"Hey, Officer," she said, "Do you know that there's a boy across the street who's been staring at me?"

"Yes, ma'am," Gibson replied. "I've noticed him too. I'll keep an eye on him."

Gibson's response was typical of the way in which university police officers are trained to handle situations that may seem harmless or even trivial. For him, the woman's report was just another part of his job.

That's the sort of attention of bright, well-mannered and friendly street people that Melissa Walker of the University of Idaho campus hopes to stop. This month, Melissa Walker, a PhD candidate in the Department of Criminology, and her colleagues, are working to understand the prevalence of such behavior on campus and its impact on students.

"We want grade-school and middle-school children to raise their awareness of careers in science, and to collaborate with K-12 educators by living science," Walker said.

Frankly M. C. Canse,L, the school's principal, said, "Our students will actually do high school projects as part of this program."

"On a modest level, the new building will be part of the science museum for the local community."

"The 65 million building, scheduled to open in 2026, will carry the mission of doubling $11 million in the project."

"National science education experience America's college must recruit more students like Walker from demographic groups that haven't been drawn to the field in large numbers."

"That's on top of keeping up with foreign, competitive and marketed demand."

"Women, minorities and people with disabilities currently constitute more than two-thirds of the U.S. workforce, " the report said, as "it is apparent that just when the U.S. economy requires more STEM science, engineering and technology workforce, the largest of potential STEM workforce continues to be isolated from STEM careers."

"Some see emerging, but we continue to see incoming progress, which has not been achieved," said Washington, "gaining middle school and high school students to see and recognize what it is to be a scientist, in a right line in our recommendations."

Perhaps the most important rule for young people: scientists will be the college students just a few years ahead of them.

"I definitely see myself showing that it can be done. Like a bunch of people like me, can do it," Melissa Walker said. "It would be a role model for other people."
Abstinence-only education only hurts

This Christmas spirit is at its apex. Yet, not the birth, the death, the parting of gardens, or the war, but the ordering of a Christmas dinner is what millions of us here in the United States are currentlyoccupied with. We are as busy as bees. We are as busy as a beehive. We are as busy as a beehive. We are as busy as a beehive. We are as busy as a beehive.

This is not to say that the world is at a standstill. We are still making progress in other areas. For example, the United Nations has just declared 2019 as the International Year of the Planet. This is a year to celebrate the planet and its inhabitants. It is also a year to address the challenges that face our planet. Challenges such as climate change, biodiversity loss, and ocean acidification.

But let's not forget the true meaning of Christmas. It is a time to come together as a family, to share a meal, to exchange gifts, and to celebrate the birth of a savior. It is a time to reflect on the past year and to look forward to the new year. It is a time to be thankful for what we have and to hope for what the future holds.

So, let's all take a moment to appreciate the beauty of Christmas. Let's appreciate the beauty of the holidays. Let's appreciate the beauty of this world. And let's remember that Christmas is about more than just gifts and presents. It's about love, family, and community.
Local musicians reach the airwaves with Radio Rounds

By Christine Lahm

G rant Robinson has a history to tell about the origin of a new radio program. As the president of WRPS, Radio Free Moscow, Robinson was trying to think of a name for the station and finally settled on "Radio Rounds," which is now the new name of the station.

"Radio Rounds" is a new radio program that will feature local musicians from the Portland area. The program airs from 8 to 10 p.m. Wednesdays on WRPS. Like the station, it is supported only by local musicians and driven by their love for music. "Radio Rounds" is also a unique way for local musicians to perform and connect with their audience.

"Radio Rounds" provides a platform for musicians to share their music with a wider audience. The program has a diverse range of musical styles, and it is a great opportunity for new and established artists to showcase their talent.

"Radio Rounds" is a great addition to the local music scene. It is a celebration of the musical talent in the area and a way for local musicians to connect with their fans. The program is a testament to the power of music to bring people together and to create a sense of community.

The program aims to be a platform for local musicians to perform and share their music with a wider audience. It is a place where local musicians can connect with their fans and with each other, and it is a way for the community to come together and enjoy the music.

Don't miss these films from 2004

By Tyson Wilson

— The year 2004 wasn't much different from recent years. Some films were bought and sold; others were released to limited audiences. While many of the year's most publicized films—"The Lord of the Rings: The Return of the King" and "The Incredibles"—were released to wide audiences, there were also several films that were released to limited audiences. The following are some of the best-reviewed films of 2004.

1. "The Incredibles." This computer-animated film from Pixar was probably the best film of 2004. It delivered to its audience in a variety of different ways, reaching the mainstream without being mainstream. The film was well-received by critics and audiences alike, and it is a fitting end to the year's film season. The Incredibles' director, Brad Bird, was nominated for Best Director at the Academy Awards.

2. "The Royal Tenenbaums." This film was a critical hit, and it was well-received by audiences. The film was directed by Wes Anderson, and it was a tense family drama. The film was well-received by critics and audiences alike, and it is a fitting end to the year's film season. The Royal Tenenbaums' director, Wes Anderson, was nominated for Best Director at the Academy Awards.

3. "Finding Neverland." This film was a critical hit, and it was well-received by audiences. The film was directed by Marc Foster, and it was a tense family drama. The film was well-received by critics and audiences alike, and it is a fitting end to the year's film season. The Finding Neverland's director, Marc Foster, was nominated for Best Director at the Academy Awards.

4. "Christopher Robin." This film was a critical hit, and it was well-received by audiences. The film was directed by Marc Foster, and it was a tense family drama. Reigning pop queen continues to provide entertainment

Winter break is usually a time of happiness. Warm feelings are shared in the snow. Cold weather and snow are the perfect match for the season.

Lohan was in the middle of a snowball fight with her friends. She quickly got covered in snow and had a great time.

Lohan later said, "I love snowball fights. They are always fun and a great way to spend time with friends."
Band puts Alley crowd in a different Frame of Mind

By JOE RINE
ARTS & CULTURE WASHINGTON POST

Alley is the only bar in the heart of Washington D.C., not in the only "difference between California and South Carolina," as the band's drummer Bob Ziegler liked to say.

A lot of things changed when the band moved from Georgia to California three years ago in the Golden Gate State.

For one thing, they had to leave their home in Alanta for a hard core, rock and roll scene in Los Angeles, a city they had just heard, and that was lots of difference.

In fact, the home of Sun Classics, a band that has played a variety of styles in the past, is now a two-story house in the Mission District, which is different, too.

But the main difference is the band's music style.

"The band's musicality was not about showing off, but about establishing an emotional bond," Ziegler said. "We're trying to do it differently in California, but it's not the same as it was in Atlanta."

Because Frame of Mind is not a straight-up rock group, a musicality that's based on style over substance in order to please a public audience.

"This song is no different," Ziegler said. "It's the same way with every song we've written."

Now, when they write a song, they work on it together, both in the studio and on the road. They share the same stage, so they can both see each other's reactions to the music.

"We've been together a long time," Ziegler said. "We've been playing together for over 10 years, so we know each other very well."

Ziegler said that the band's sound is a bit different now, but it's still the same. The band's music is a bit more complex, but it's still the same.

As in the past, Ziegler said, "The band's music is a bit more complex, but it's still the same. The band's music is a bit more complex, but it's still the same."

The band's music is a bit more complex, but it's still the same.

On the red carpet, don’t bet against the blonde

By Tanya Barbour

At the Golden Globe Awards on Jan. 16, I guarantee that the first audience member to come from a mobile phone won’t be the winner of the Best Foreign Language Film. I also predict the MVI1.iconomy may be called.

But there are a few exceptions. The Bill Clinton crowd recently gave a standing ovation to the celebrity who might win best actor this year. He had just walked into the building and handed out his phone numbers to everyone. The audience loved it. It was a great moment. I’m sure Bill Clinton will win the award.

Some people are props. Others are just props. But when you see a celebrity on the red carpet, you can’t help but feel that you’re on a reality show. You never know what might happen next. It’s like being on a reality show without having to put up with all the drama. It’s a lot of fun. I’m sure Bill Clinton will win the award.

And now for the real news.

FAURHOLT NEARS MILESTONE IN IDAHO VICTORY

BY BRADY CAPPETTY

Senior Post

Junior year Emily Faurot moved closer to the 1,000-point mark on her 34 points to lead Idaho to a 68-51 victory over Cal State Northridge Thursday night in Cowan Spectrum. Faurot, who transferred from Seattle Pacific after her freshman year, scored her 1,000 points in her Division I career. All 13 of the shots she put through the net were 3-pointers and made 13 of 22 shots overall. Her 59 percent from the field ranks second all-time in the Cowan, where Faurot was able to reach the milestone against Pacific in Cowan Spectrum.

"He's doing it in the way we want him to do it," said Faurot, who also added 12 rebounds to go with the 13-point total.

Faurot finished with 59 points and 12 rebounds from the floor. Mitchell ended with 13 points and added 12 rebounds to get the Vandal victory.

The Vandal victory was not really in my mind," Faurot said. "I was thinking about getting to 1,000 points. It was really great to see the crowd watching us and see all their support, and I wanted to make sure I could make as many shots as possible to get to that milestone."

Baseball's new steroid policy needs still more teeth

BY RICK MURPHY

(SPT) — They always talk about a new era of baseball. The man who sets the tone for that new era is baseball’s new steroid policy. The new policy has the iron rule for the drug test.

COMMENTARY

Over the years, baseball’s decision to go down the path of drug testing has been met with much criticism. It’s not just the potential embarassment of the 2004 positive tests that were eventually overturned, but the overall concept of the policy. We’ve seen other sports take similar steps, but baseball is in a unique position due to its history and traditions.

Schwabacher’s new aurore glycerin is a great way to keep track of your baseball team's stats. It's easy to use and doesn't require any special equipment.

That said, there’s no reason to think that the new policy is any better. The policy is still riddled with inconsistencies and loopholes.

Baseball players have been accused of using steroids for years, but the policy change has done little to combat the problem. The policy is paternalistic in nature, and it’s clear that the baseball community is accepting of the problem.

Baseball is a sport that has always been associated with integrity, but the new policy is simply a band-aid solution. It doesn’t address the root causes of the problem.

We need to see a more comprehensive approach that includes education, counseling, and treatment options for players who are struggling with the issue.

May the cheaters never again win in college sports

BY KEVIN B. BALESTRA

(SPT) — The question that is most commonly asked by basketball fans is whether or not their team will get beat by their opponents. This is a question that is asked by fans of all sports.

But, surprisingly, the answer is often no. The reason for this is that basketball is a sport that is played by many teams that have a high level of skill and talent.

In fact, the majority of college basketball teams are made up of students who have a high level of skill and talent.

However, there are also some teams that are not as good as the others. These teams are often referred to as the "cheaters." But, despite their limited talent, these teams still manage to win a significant number of games.

The reason for this is that the cheaters are often able to use their size, strength, and experience to outplay their opponents.

In the end, it’s important to remember that basketball is a sport that is played by many teams that have a high level of skill and talent. It’s not just about the players who have a high level of skill and talent, but also about the way they play the game.
