in certain specified departments, based up on a broad foundation of elementary and general training. Freshman and Sophomore years. For example, for one majoring in German. Preliminary and Intermediate work will not count towards the major at all, but will be merely prerequisite to advanced work in that department.

"Scrappy" Courses Barred

Hibberto, it has been perfectly possible for one to have completed his so-called major by the end of his Junior year, or in exceptional cases even in his Sophomore year, leaving most of the work of his major out.

The "related minor" is rather self-explanatory, it being a group of courses less extensive than the major but clearly supplementing it. It is probable that here may be placed courses in certain departments not present developed to the point of offering majors, for those there is with very little more than a considerable number of specific credits or "free electives."

The major and related minors are to be noted to amount to ever full plan of work. In Junior and Senior years, except by permission of the Scholarship Committee."

Hired Foundational Work

As preparation for this distinctly higher grade of advanced work along definite lines, the faculty has made the work of the first two years somewhat more progressive then hitherto, yet at the same time enforcing a men's broader breadth of field. For example, where a major is a group of courses unmistakably a single major, for a B.S. student to get thru with no history of commerce is a mere matter of time, and for a B.A. student to omit the entire field of the social sciences and in fact all natural and mathematical science. These defects will be corrected. In the social science group all B.A. students will hereafter take eighteen credits, twelve of which will regularly come in the first two years, consisting of Medieval History and a new course in Greek and Roman Civilization. The remaining six required credits may be taken in history, economics, or sociology. B.S. students, similarly, will be required to take a minimum of twelve credits, unspecified, in the history-economics group.

In the great field of science B.S. students will be required to elect a total of fourteen credits, that is, ordinarily two years' courses, one of which may be taken later in the same major. This enrichment of the Bachelor of Arts curriculum is in line with the general plan of the institutions of the country and with present "educational theory."

B.A. A Real Science Degree

Perhaps equally striking are the changes in the Bachelor of Science curriculum. At present required credits for the B.A. and the B.S. documents differ in several respects, and the B.S. requires a more comprehensive study of science majors.

C. OF W. DEFEATS IDAHO QUINTET

IN ONE OF THE FASTEST GAMES PLAYED ON THE IOWA COURT THIS YEAR THE WASHINGTON-TON MEN ARE WINNERS

The Passing and Team Work of the Vikings Left Reserve Special Comment

Well we gave them a battle, one grand little battle and even if they did walk away with the contest there will always be some consolation in the fact that the score at the end of the first half was Washington 14—Idaho 11. Baurage and his crew pushed the final total up to 54-22 but they had to scrap for every point they made.

"Men sure more up with a whirlwind game in that last fifteen session and Savidge was badly worried, worried to such an extent that he called time out to try to whip one of his stars into shape by some warm advice. The score was tied repeatedly during this half only the stellar work of the Washington captain kept Idaho from grabbing the lead."

Washington started the second half with more stuff than they had evidenced during the first entanglement but they fatted up their three-point lead to a comfortable margin. Charlie Gray was stopping his usual speedy gait during the last half, chucking up his fourth field goal and Edie Hodge shot one basket that brought the fans to their feet with his class but Baurage was not to be denied and his six field goals, Washington's winning margin, was a lot like a taste of what was to come.

We'll all hurry to do our best to Savidge. He's a great basketball man and his men are just about to admit that he's got the game on the whole. If there are better centers in the country than the Washington captains and coach, we never heard of them."

One bouquet must be passed to Charlie Gray. With Finch, an All-Northwest, guard, watching him, Charlie shot four field goals and added to that the feat of hooping ten free throws.

The papers say that Washington won again at Seattle on Monday by 25-12 score but of course we can't get all the dope until the team returns.

The following was the lineup for Saturday's game:

Referee—Hinderman of Spokane.

Headline in the Whitman College Pioneer says, "Mid-Year Test Brings Long Distance Men." Lists the names of those long distance men fell by the wayside.

CHANGE B.A. AND B.S. COURSES

MEETINGS OF THE FACULTY HAVE RECENTLY DEVELOPED IN MANY CHANGES IN CURRICULA

Provisions for a Better Balanced and More Intensive Course of Study to be the Result

During the months of January and February frequent meetings of the faculty of the College of Letters and Sciences have been held to consider the matter of revising both the entrance requirements and the curricula of the B.A. and B.S. degrees. After much consideration the recommendations of this College have been approved by the University faculty and will be in full force beginning September, 1915.

Putting these various changes into the framework of the various degrees the two apparently contradictory forces have operated, namely, first, a broadening of the curriculum to include the requirements for entering it, and, secondly, a greater specialization in the final four years upon choosing a major. In the clover statement the word "apparently" should be noted, for, actually, the main purpose was, and still is, that of providing for a better balanced and at the same time more intensive course of study. Except for pre-professional, since 1919, a substitute for required mathematics for both degrees and, two years later, requiring one year of science for the B.A. degree, the curricula for these degrees have not been materially changed in over fourteen years.

In that space of time the entire faculty has changed in personnel and new ideas have been introduced in the educational world, demanding expression in the curriculum outlined for our two years in literature. Interchange with the coming of President Brannen was the faculty desiring of having our courses of study reflect, to some extent, at least, the result of his long years of experience and study of these very problems, that is it only fair to say that the slightest pressure was laid to bear by the President upon the will of the faculty in these matters.

If Yesteryears

Generations of Idaho students—not to say faculty members—have struggled with the arbitrary nomenclature of "basics," "characteristics," and "major, minor, and free electives," and it is safe to say that had this been the half a hundred University alumni could now name with certainty their "major" subject as a matter of fact was an arbitrary and an undesirable situation. First, these terms were by unanimous consent discarded. To be sure, the new outline includes the word "major," but it has taken on a new dignity and in both this term and the related "minor" are not applied to an indiscriminate aggregation of all the credits but rather to a group of subjects through a four-years' course, but to a rather definably limited, carefully selected sequence of major and minor courses.

SHANGHAI MEN TO ATTEND IDAHO

WILL TAKE WORK IN RAILWAY ENGINEERING AND ECONOMICS AT THE UNIVERSITY

Were Students of S. R. Sheldon, Formerly Connected with the University of Idaho

Messrs. P. K. Hsu and P. F. Yang of Shanghai, China, graduates of the railway engineering department of the Government Institute of Technology, arrived in Moscow last evening to take up special work in railway engineering and economics at the university, pending the approval by the Department of Labor and Immigration of a contract under which they will enter the traffic department of the Santa Fe Railway company.

Mr. Hsu and Mr. Yang left Shanghai January 10th. At Kobe, Japan, they left the steamer, and traveling by rail, visited the cities of Kiooto and Tokio before rejoining the Santa Fe. They arrived in Seattle on the 13th, and after spending a few days with friends there, came directly to Moscow.

Both have been students under S. R. Sheldon, on whose recommendation they came to the University of Idaho. They report that Mr. Sheldon is one of the most able and popular men ever connected with the Institute, and that he is now dean of the electrical engineering department, one of the two sections into which the college's department is divided.

The Government Institute of Technology consists of three schools, and the enrollment is in excess of seven hundred. Students enter the primary department at the age of twelve to thirteen, with not less than two years of training in English, and spend four years there. Then follow five years in the Middle School, which corresponds to the American high school and the freshman year of college. The three years in the College are devoted almost entirely to technical studies, and the following graduation, students enter the service of the governmental railways, telegraph, telephone or educational departments, or go abroad for further study or to gain experience with industrial or public service companies.

President Franklin recommended the students and family for their support of Assembly. The touring was long.

The visit solicited by Mr. Pamelee were well received and enthusiastically applauded.

The speaker of the day was to have been the head of the History Department of Washington State College, but unfortunately he was not to be here. Professor E. M. Hultin spoke in his stead.

In dealing briefly with the philosophy of human life and limitations of human reason, he said:

"When the great laws of evolution and the great forces by which we are indebted to Darwin and the laws governing immitable things were propounded it was the hope of philosophy to unlock all the questions of life. But science did not answer the questions."

When do they come? Why are we here? Whither are we going? The problems arose because these problems were not solved.

Since the time of Emmanuelle Kant philosophy has been more humble concerning itself with problems like these: What is the origin of our knowledge, its extent and ability? The human gets knowledge in two ways, induction and deduction, reasoning from general specific or specific to general things. The instances upon which knowledge is founded are got through the senses before the brain takes hold of them. But, for instance by vibrations, touch transfer the sensation of hard or soft; the eye transfers the sensation of green, yellow, etc.

But these systems or senses are too few to know the world in which we live. We cannot know electricity or radium. Not only are the systems too few in number but they are too limited in scope. There are vibrations too fast and vibrations too slow for the ear to record. Mechanically there are instruments which can record them. In the smell the dog surpasses man; in sight, the eagle surpasses him. Senses vary in individuals and from time to time. Thus we say the greatest defect in our understanding is that the systems are too limited in number and in scope. We know nothing of an object in itself as first hand. We know only the vibrations and they may be misleading. This difficulty in understanding the world is an insurmountable one. The phenomena about us we cannot know but only make deductions from them. No one can prove time, space, or the existence of course and effect. They are assumed.

Our knowledge then is inadequate to prove from whence we came or why we are here and where we are going. Even the existence of an outside world, it is claimed, cannot be proved. Science depends upon sensations for its material. It is a limited statement. Likewise each science is limited and hence it must be modest.

But men cannot live by the air of science alone. They must go over the wall beyond these limitations. The human heart always aspires to know and therefore it goes to the present artist to the philosopher to answer the questions of life. There are four solutions to the questions of life: whence we came, why here, where going:

First. Revelation.

Second. Denial, which teaches that all ends with the grave. There have always been poets of pessimism, Third. Doubt. The agnostic does not know how things will end.

Fourth. Faith, or the source of the mind and heart to something which we cannot prove. It is justified in the experiences of the human race. The greatest bases of justification of faith is the need of a postulate for some outcome of human life. It is as useful as the use of time and space, and men are justified in believing there will be a just outcome to all noble deeds.

The Hovenzollerns are not alone in their intimate knowledge of the ways of the Almighty. A Mr. Francis Williams ends a poem with the line: "And all the while God and I stood outside in His blessed sunlight and laughed." -- Pasinetti.

To which we would add, in defense of the Hovenzollerns, that the war has not ended yet.

HOME OF GAMMA PHI BETA

middle of the round table which made the center of the Phi. Small rolls covered each place spread a warm glow over the happy faces of the thirty-eight active and alumni members gathered in honor of the initiates. The following menu was served:

Oyster cocktail

Saratoga waters

Creamed chicken in timbales

Stuffed potatoes

Celery

Breaded corn with green peppers

White bread

Olives

Crabberry jelly

Tomato salad

Wafers

Sour cream ice cream

Devil's food cake

Mints

Rhubarb pudding

Bar d' la carte

Grape punch

Miss Hilda Nelson, whose management of the cafeteria has been so successful, deserves much credit for the delicious banquet which she prepared.

When the punch was served, Mrs. Clifford Dittmer, who acted as toastmistress, arose and introduced the subject of the toasts. The speakers followed o'er the sable of a mountain and the various experiences met in climbing it in their toast. Nora Ashton, '18, spoke as "The Crescent: First Boms on the Pathway"; Charlotte Lewis, '17, added a few words about the difficulty of climbing "The Cradle"; Katherine Pitcairn, '25, had the topic, "Nearing the Summit"; and Edna Dewey, '09, spoke about "The Summit" from the view of an almus as a fitting climax for such a series of toasts; Verna Johannsen, '16, gave a prophecy of what was to come after the summit had been reached. It was characteristic of the text which will be long remembered. Blandy has careening the walls and streaming from the ceiling in the middle of the floor immediately, ushered one into the spirit of the season. Our corners ornamented with blankets and pennants and corded over by a few pillars offered a peaceful setting to the sterner decorations. Arrows bearing the name of the partner for the evening proved a helpful and much appreciated novelty.

Punch was served tastefully by the Misses Joanie Kenne and Dorothy Pur-

son. Shortly before closing, one felt with ice cream of unknown but delicious composition, were distributed and afforded a tempting refresh-ment.

Those invited were: Dr. Breuning, Miss French, Miss Benson, Mr. and Mrs. Griffith, Mr. and Mrs. von Kade, Mr. and Mrs. S. E. Hutton, Miss Stephens, Miss Dorle, Mr. Killington, Misses Brannon, Peterson, Violat, Burr, Adair, Purerson, A. Burke, Thomas, Kennedy, Watson, McPherson, M. Burles, and Dillman Conner of Pot- lach, Messrs. Faye, J. Gerlaugh, Peterson, Bernhard, Aldenhorn, Christ- em, Otho, Sillinger, R. Gerlaugh, Huddleston, L. Killington, Jones, Kenne, Lunnemann, Dewald, Ballock, G. Syl- vester, Davis, Barger, Field, Strato, Shoup, King, Bestl. Scheffeld, Youngs, Sieler, Casdaly, Nipp, Hyde, Mason, Nankervis, and Barger.

Last Friday and Saturday Pfi Delta initiated the following men: Graydon Crawford, Ronald Everly, Eigmund Stelz, Harry McDouall, Donald

SCIENCE LECTURE
GIVEN MONDAY

PRESIDENT BRANNOX GIVES INSTRUCTIVE LECTURE TO FOR.
ENTRY CLUB

Position of Darwinism as a Science Explained

Many people other than members of the forestry club availed themselves of the opportunity, Monday evening, of hearing President Brannox's lecture on Charles Darwin and his work.

Dr. Brannox presented his subject in simple, direct language, avoiding, as far as is possible, in such a discussion, the use of technical terms, and thus made his talk of interest even to those who have not been educated along biological lines. He pointed out first that the science of Darwinism has been misunderstood and misinterpreted by those who have studied it only superficially, or not at all. "Darwinism," he said, "never was synonymous with organic evolution. It had to deal specifically with the theory of descent." The theory of descent being associated with natural selection and kindred subjects.

Explaining the position of Darwinism as a science he said: "Men long observed that there were large numbers of different kinds of animals and plants on the earth's surface. He laid the origin of these organisms in various ways some students supported the view that these organisms had arisen spontaneously; others that they were created supernaturally, and a third group, headed by the famous Charles Darwin, held that they descended from ancestors of lower types. This theory of descent refers to the origin of kinds of life and not to the origin of life itself.

The first part of the talk was given over largely to the life of Darwin, and the second part to the reading and discussions of extracts from his book "Origin of Species."

Darwin's birth occurred on the same day and year as that of Lincoln, February 12, 1809. As a boy Darwin took little interest in school work, although he was fond of reading and of the study of chemistry. At the age of 14 he was sent, by his father, to Edinburgh University, and later to Cambridge. At both schools he was an indifferent student, but he became associated with some of the great scientists of that time. While on an excursion with Riddick, the geologist, a tropical shell was found in a gravel pit, and it was this little incident, says Darwin, that made him realize that "science consists in grouping facts so that general laws or conclusions may be drawn from them."

It was through the efforts of the botanist, Hooker, that Darwin was enabled to sail with a scientific expedition on the Beagle. The voyage lasted nearly five years and covered a large part of the earth's surface. It was probably this voyage that started Darwin on his scientific career.

In young Darwin was greatly interested in poetry and music, but later in life, according to his own statement, he became indifferent to them, and also lost faith in the general teachings of Christianity. He did not become an absolute Atheist, or disbeliever, but rather an Agnostic—one who is sure.

The second part of Dr. Brannox's talk—that on the "Origin of Species"—was necessarily somewhat technical. Characteristic selections from Darwin's work were read and discussed; one of the principal points made being that no attempt is made to explain by Natural Selection the cause of variability in plants or animals. Natural Selection deals entirely with the preservation of individuals in which favorable variations occur and the destruction of those with unfavorable characteristics.

In closing Dr. Brannox explained the extent to which Darwin's teachings are accepted by present day scientists, and explained some of the objections raised against them.

AGRICULTURE

On Friday, February 26, the Short Age will meet the local high school in Lewis School Court to contend for track honors. Just exactly what events there will be has not been decided, but there will not be a pole vault, javelin, discus, or broad jump dash. This meet last year was a decided success, and should be better this year, as there are a number of discrepancies yet to be settled.

Ralph W. Hughes, who formerly had charge of the University dairy herd, recently received a position in the Idaho Industrial Training School at St. Anthony. He will take charge of the 65 head of dairy cows owned by the school.

That the S. P. A. Literary Club is a successful organization is easily shown by noting the attendance and enthusiasm of the Short Age boys. The program on Thursday added another to their series of enjoyable evenings. The paper by Bawney Kong and Lockwood was thoroughly appreciated.

Prof. Hamilton's talk on "The Practical Side of Darwin's Origin of Species" contained some very pertinent facts regarding this position the short course man will occupy when he leaves school. The Short Age, in their course of fifteen months get the cream of the studies offered in the University: it is they who have to go back and make the farm pay. At the same time they get enough technical training and scientific work to enable them to fall in line with the progress of the times. Long course men are in great demand as teachers, county agents, Extension workers, etc., and their training in many cases fits them more for these positions than for practical farming. Novels of schools sometimes have trouble to interest people whose old foggy ideas do not jibe with the ideas of "them college fellows." But fill our farms with men who have had the S. P. A. training, and the extensive work will become much more effective and easy, because the farmers will already have the "bug" of enthusiasm as an appreciation of the work being done for them.

It is sometimes thought that the short course is of no more value than a high school training, but Prof. Hamilton pointed out the advantages of the former in the College environment, better qualified instructors, and most important of all, the chance to act as a man and develop honor in one's self, which opportunity is too often neglected by high school discipline. A recreation by Becker, and a reading by Palmer in honor of Lincoln, concluded the program.

ALSO

The Office of the University Argonaut, your student newspaper, as well as the general office, will remain open from 10 a.m. to 6 p.m. on Saturdays during the summer vacation. The calendar for the coming year is now being prepared, and a special edition of the Argonaut will be published to announce the coming events. The office will be open on Saturdays during the summer vacation.
Brief Local News

Norma Dow is pledged Omega Pi.
Norma Martin returned to school last Wednesday.
Frank Martin was pledged Kappa Sigma last week.
Wurtham, Paradea, 40, was a guest of Phi Delta Theta last week-end.
Mabelle Rudebell and Zella Bigham were up for the Omega Pi dance.
Get your hair cut at the Idaho Barber Shop, Gilford Bros., Prop., and
Miss Lilian Compton of Potlatch was a week-end guest of Omega Pi.
Edan and Mary Willisons went to Kendrick hospital on account of illness.
Emery Knudsen is visiting his brothers at the Kappa Sigma house this week.
For Baseball and Track Men—Better Shoes, in all sizes and lower prices at David's.
David Evans, '16, of Lewiston was a visitor at Phi Delta Theta Saturday and Sunday.
Fred Shields, '10, of Spoken was a visitor at Phi Delta Theta Friday, Saturday, and Sunday.
Save your wishes for the Idaho Barber Shop, Gilford Bros., Prop., and
Andy—Speaking of his slim in education: "Viola, well, I'm looking for more than you are."
Arens, Burns, Martinson, and Hyde went to Pullman last Saturday to see the U. of W.-W. S.C. game.
"Dud" Clarke of Whitman was a guest of Phi Delta Theta Wednesday. He has registered in the U. of I.
Misses Lukhin, Kjomsen, Works, Mr. Arthur, Mullin, Anderson, and Wood were dinner guests of Kappa Sigma Sunday.
Misses Watts and Zinnerman of Pullman came over to see the U. of W.-U. of I. game. They were guests of Kappa Sigma.
For Baseball and Track Men—Better Shoes, in all sizes and lower prices at David's.
Miss Lottie Work went to her home in Kanabah on Thursday where she will remain some days. She has been ill for several days with the "grippe."

The graduating class of the S. P. A. have chosen George Fox and C. J. Johnson as commencement speakers. The exercises will be held Thursday, March 11, at the auditorium.

Frank Moore attended a meeting of the State Branch executive board of the American Poultry Association last Thursday at Grangeville. On Friday evening he lectured on poultry topics to a large audience.

Dorothy Ellis and "Peg" Means came up last Saturday from Lewiston to attend the initiation and banquet of Gamma Phi Beta. Miss Ellis has a position teaching Home Economics in Lewiston this semester.

Miss French will give a reading at the next meeting of the W. C. A. February 24. Miss French's readings are always delightful and it is expected that the meeting will be one of the largest of the year.

The movable schools of the University, under the direction of Mr. C. D. Clarke, are doing excellent work and having great success in southern and eastern Idaho where they are in progress. Prof. Hickey has been visiting them and has been granted leave of absence to attend two more of the schools.

Sunday Dr. Brannon has been asked to speak in Pullman at the Older Boy's Conference held under the auspices of the Island Empire Sunday School Association. Dr. Brannon will speak in the afternoon on "Playing the Game," and in the evening on "Team Work." Judge Atlee of Boise will also speak on the program.

Harry Soulen, '14, instructor in agriculture at the Beaverhead county high school at Dillon, Montana, has received considerable credit in recent classes of the Dillon papers for the splendid work of his basketball team. Out of six games, including those with Butte central high school and Anaconda boys' boys four games and tied the fifth. This unusual fine record will give the Dillon boys a place on the state championship contest to be held at Missoula.

For Baseball and Track Men—Better Shoes, in all sizes and lower prices at David's.
