PLAYED ON MUDDY FIELD
A. C. Uses Straight Football—Idaho Frequently Penalized

SEE THE UNIVERSITY
See and behold the University.
Yes, what a well-known and well-conditioned University it is! What is the University?
The University is for the purpose of taking the youth of our country and making them refined and educated and superior.

How does the University go about this?
The University goes about this by teaching the students all about dead things—good languages, dead kings, dead races, dead civilizations, dead theories, dead religions and so on.

Why is that?
The University aims to direct the attention of the students to the beauties of the past in order to prevent them from thinking too much about the horrors of the present.

Are the students taught to think?
No. They are merely taught facts which are carelessly hand-picked. They are made to believe that it is dangerous to think, because it might disturb some of our well-established and more respectable institutions.

Who decides what those facts shall be?
It works this way: The object being to prevent the development of every kind, the students think what the faculty tell them to think; the faculty think what the trustees tell them to think; the trustees think what the politicians tell them to think; but the politicians and the philanthropists and the industrialists and the financiers and the capitalists and the monopolists tell them to think, and the students think that nothing is so reprehensible as to try to disturb a profitable graft after it has once been stockaded and bundled and distributed according to the rules of the stock market.

Does the University realize what it is doing?
No, you see, small cog in it is a very large wheel.

No, except upon these rare occasions when a member of the faculty breaks through the lies and INTO FACTS UPON EXPRESSING OPINIONS WHICH ARE NOT ORTHODOX—Life.

MILITARY NOTES
Drill was resumed Thursday, the 6th of November, for the first time since the W. S. C. Idaho skirmish. The cadets were a little bit out of time, but didn't quail, they didn't get out of time, and promptly worked it up to the level of the second maneuver with Pullman.

The cadets were selected for both commissioned and non-commissioned officers, and in another week we expect to have present to the bat-

tery the officers for the coming year. As soon as the new officers are properly initiated into their work, we expect to appear in full uniform.
The University Argonaut.

W.C. PROUD OF
COACH AND TEAM

COLLEGE IS ALMOST FOOTBALL
CITY—MAY LETTER REWARD
FOR OTHER N. W. TEAMS

Idaho Scarcity Restored in Write-Up
of Big Game—Diets Popular

W. S. C. thinks that the Washington
State College football team is just
about the best in the world. They are
willing to argue the question any time,
and have a long string of convincing
statistics, based on comparative
scores which are presumed to prove
beyond the shadows of doubt that Pulla
man’s football teams is very superior
to Princeton, Harvard, Yale, Cor-
nell or any other eastern institution’s
football team one is led to mention.
But their hearts were in their throats
all afternoon during the interval
between halves, when Montana
was on the long end of a score to
score. Diet’s aggregation recovered
during the second half and played real
football and added another victory to
their unbroken string. All the ability of the Indians to come from
behind, and by fighting win the game
can only be commended, nevertheless
the rock-spirit of the general
student body really needs some set-
back to recall them to this earthly
state.

The write-up of the Idaho-W. S. C.
game in the Evergreen seemed scarec-
y to concede that Idaho even had
eleven men opposing their champions.

We quote practically every word
which the Evergreen used in speak-
ing of Idaho in a paper which was
otherwise just filled with stories of
the game, afterhour, championship as-
pirations, etc., etc.

Determination, Not Good Playing

"However sweet the victory may be
it will not be confused that it was de-
termination and fierce fighting
rather than excellent playing, that
was for Washington. The players
went into the game with a fierce de-
termination to win and it was their
eager desire that carried them
through. It was by no means a poor-
ly played game. Nevertheless, the
score would have been greater had
the game been run differently. It
was only steady battering, augment-
ed by an indomitable spirit, that en-
couraged the W. S. C. backs to knock
their opponents aside. There was
some wonderfully good playing dur-
ing the game, but it was all con-
flated to the old style game, with
ability to plunge and fight at a pre-
mum.

"The Idaho team was a disappoint-
ment. Purdy, playing right half,
was the only Idaho man who could
gain consistently, and when he was
removed there was little fight left in
the team. Groniger, much-touted
tackle, was shown up repeatedly,
and Captain Brown, formerly a star
backfield, was woefully at fault.
Lommasson, playing fullback, was
almost useless to the Idaho team,
and Morriston, practiced
ally without experience, failed
pretty often to use judgment.
The Idaho line was ripped open on every
play and had no chance to hold a
yard.

"Only once did Idaho have a pos-
tibility more certain to score—
when Thompson, with his six-foot
nine-inch, leaped over the Idaho
line and was only stopped by the
brass of an Idaho side ball. Idaho
was not quite ready, however, and
Brown dropped back for a drop but the
kick was low and wide.

"Three times Idaho tried drop-
kicks, but the attempts were foiled
in every case."

THE LAW COLLEGE

Among the departments of the Uni-
versity that have manifested great ac-
tivity, having a growing enthusiastic
student body is the Law College.

Established by the board of regents
in 1909 at first under the able in-
struction of Judge John Mclane, now
a prominent lawyer in Boise, it has
grown in popularity, winning its war
on its own merits, and in spite of many
adverse circumstances, until now it is
recognized as a Law School of high
rank in Idaho and in quality of in-
struction by such institutions as Har-
vard Law College and the Law Schools
of Northwestern and Chicago Univer-
sities.

Thus the able efforts of Dean Geo.
D. Ayres and Prof. Arnold, who at-
tended the American Bar Association
at Salt Lake City and by the co-op-
eration of Prof. Gill and Altic, Moore.
The Law College of the University of
Idaho is now a member of the As-
sociation of American Law Schools.

This increase in the library has been
the result of indomitable efforts, and
increasing labor of Dean Ayres.

The law library this year has been
set apart from the general library of
the University, and the law students
now revel in their own, more negesta-
ous library. The library at present is ta-
ned up of by five members of the
Law College chosen on scholarly
basis. At present they are Marion
Bart, Floyd Bowd, Fred Blesch,
Vernon Creason and Charles Owens.
The present system of combining practical work with legal principles
were ever possible, and by the
law club work, in which students
acquire points of law; has brought us
acquaintance with some of the most prom-
inent lawyers of Idaho and the
Northwest that they are confident
that no college excels the Idaho Law
School in fitting young men to prac-
tice in the courts of the Northwest.

The Law College this year for the
first time, put into force its new re-
quirements of a year’s college work
as a prerequisite for admission as a
regular student in the first-year class.
Many looked upon this “stifling up” of
the requirements with misgiving.
Fear was expressed that the new re-
quirement would result in a decreased
student body. On the contrary not
only has the Law College a larger at-
tendance than present last year at
the corresponding time, but also the
University now has a larger number
of “pre-legal” students, awaiting ad-
mision to the Law College.
The assembly was appropriately led by a duet by Miss Bernadine Davidson, who sang, "Oh That We Two Were A-May," which was greatly appreciated by all.

President Bramson, after making a few announcements, stated to his audience that he would not be at the game on Saturday, due to an important meeting in New York. He said that he was, however, going to be there in person, yet his presence would be with the team as they battled their opponents and that he was "Yours for Idaho."

In introducing the speaker, Judge Corlies of Portland, President Branson thanked him for bringing such great inspiration and beliefs to the University students, that every time we heard Judge Corlies, it helped us to come nearer to the appreciation of the great things of life.

Judge C. H. Corlies spoke on "The New Bible," in brief, Judge Corlies said that he wished to make the Bible a more attractive book. The statistics show a phenomenal sale of the Book, yet the Book is not yet popular and a comparatively few people read it. The average man knows very little of its contents. Examinations on the Bible in Universities and Colleges show that a great majority of the students are absolutely ignorant of its contents. The causes for this indifference are that few people know its historical significance. Young people are taught to worship the Book in a fallibly true; that it was written at the direction of Jehovah; that Moses opened his mouth and spoke the words of God; that nothing was true unless it was founded on the Bible.

The belief that nothing was true except it was founded on the Scriptures has brought us and blighted the progress of science. Luther held that astronomy was wrong because the Bible definitely stated that the earth was the center of the universe. This view also led men to form in sects, each sect taking a certain passage, another sect basing their foundation on some other passage. The Westminster Confession may be taken as an example of this. In footnotes under each clause of this confession, we find Bible references to support each point. This led to theological controversies and the churches lost sight of the true Christianity. The Bible has come to be a basis for settling disputes of doctrines and its real significance.

The result has been that man could not go to the Bible with his conscience for there he found man committing crimes at the dictation of Jehovah. Man could not go to the Bible with an exalted opinion of God, for he found there a petty, tribal God, no stronger or better than the gods of the heathen nations. Nothing could he go with his heart for he would have to approve of the burning of witches and such atrocities. Not even with a solemn and spiritual manner could he go there, but thru the intervention of a ritual and priest.

If man did go there in those states of mind he was immediately confronted with such passages as "Thou shalt not suffer a witch to live." Even the devil can cite texts for his own purposes. He must "swallow" the stories of Jonah, of the fall of Jericho and of the woman turned to salt contrary to science, he must believe that

PLAISIERS: COACH DIETZ AND BULLS AT DOBBIE

Coach Gilmore Dobie has been the recipient of many hard blows by sporting editors throughout the Northwest, but it remained for R. A. Orlandi, writing for the Oregon Journal, to take the hide off of the leaky coach. After a bitter assignment of Dobie, Creece contains the following comments of Coach Dietz and Gil Dobie:

"A rude shock to Dobie and his methods came the person of the Idaho, Bill Dietz, who has taken a few boys at Washington State College and woven them into the greatest team that has been sent on a Northwestern football field in the history of the game. "Dietz is the antithesis of Dobie. He is frank, open faced, honest, musical and picturesque. He promises to become popular over the Northwest to the degree that Dobie is unpopular. He promises to show sportsmanship that is unknown in the Dobie curriculum. He is an inveterate of taking a chance, whereas Dobie is not. He is convinced of his own ability. Dobie is not. He boasts of his players, while Dobie jeers at his men. He gets results by kindness. Dobie does the same thing by love. Taken by and large, he is what is known among sport lovers as a good fellow. It is to be regretted that the Northwest can not hold him as long as Seattle has held Dobie."—Evergreen.

SOME COLLEGE TRADITIONS
Idaho has some few traditions which should be observed and honored. Green caps have been long established here, still some freshmen persist in continuing—violating this ordinariness, tradition or what you may call it. One individual in particular seems connected with the idea that if he had his way, the regulating committee on green caps by appearing day after day in a red suit would be the shining model, that he'll really accomplished something of which to be proud. To the casual observer his conduct and often signifies an actual condition of custom, of which freshmen are so frequently unjustly accused. To this particular freshman and his type such accusations of right belong. High-school graduates not infrequent-ly think that they are just the individuals intended to turn the University life upside down, do things as it were.
And the sooner they get such prevent-ed notions out of their heads, the smoother will be their college course. It has been well said, the average high-school graduate considers he has reached the depth of the fountain of learning, but it usually occurs that his College Junior year, the pendul-um has reached the other extreme, he has discovered that after all, his fund of knowledge is incomparably insuffi-cient, when compared with the wis-dom of the centuries.

But we wander. In front of the Ad-ministration Building is a bench. That substantial seat was erected by last year's graduating-class for those who have become weary in mind or body, or those who are specializing in Comp. and was not built for freshmen.

Several years ago when Idaho poss-esioned a preparatory department and we, the editor, attended its scholastic duties there occasionally, it would have been suicidal to have used the terms. Sophomore, Junior, etc., in designating any particular class of that department. Second, Third and Fourth-Year Freshman. Terms and the unwritten law called for their utilization was well observ-ed. Indeed, the First Years were not infrequently or inappropriately dubbed "Bread and Milk" Preps. We have in present college, an educational organization somewhat similar to the Prep department of the past—the School of Practical Agriculture. And the individuals of this department thrive among ignorance of Idaho's precedent or an exaggerated opinion of their importance, persist in designating their classes by use of the concomitant terms of Freshman, Sophomore, and Junior classes when really they do no more to erit such titles than we would have in appropriating a title.

BETTER THAN HIS BAD
Critics of American colleges, and particularly those who think they discern a decline of student quality and culture, should take heart from President Hadley's college of the Yale boys. "The present-day undergraduates," he says, "is a higher develop-ment of civilization than his father or his elder brother," and in spite of the ironies of luxury and extravagance there is today more intellectual life in the place than at any period I have known.

Certainly, if Yale boys are more advanced than their fathers, we may logically expect on any another and greater Taft, and a greater Leonis-bury in literature and Sunn in political science. Doubtless this year's graduating class contains some seen already greater even than Hadley. Perhaps there is also a new Walter Camp on the list.

But it is not necessary to press an analogy too far, and the exception only serves to prove the rule. The main thing is the hopeful discovery that the college student of today is a better man than his dad.—The New York World.

"EXPERTS" AND "KNOCKERS"
You who follow the great national pastime, you never see a manager who runs his team so well that it could not have been much more efficiently engineered from the press-box. And you who are keen for the greatest of intercollegiate activities, did you ever see a coach who has so remarkably successful an improvement could be made by side-line "experts" To try to charm Idaho's football sea-son has not been much of a success but Connie Alleck and John J. Mc-Grave, one of the greatest general-ists in baseball were flat on their respective backs in the cellar of their respective leagues this season also. McGrave and Black did not have the material this year and neither did Idaho. This lack of material is the all too obvious reason of the defeats which have afflicted us this far.

If you are in the ant-chorus squad desert immediately and fling your hammer to the four winds. We are going to trim Gonzalez and wallop Whitman! What 'ere say? And, just in passing, don't forget that the old formats often applied to the knocker is "a short section of gas-pipe wrapped smartly around the head. Apply as often as necessary!"

Mrs. Shattuck and Mrs. Kileman es-tablished, at the home of the former, a number of college girls on Saturday afternoon. Dr. Henrietta Moore spoke charmingly on "Every Woman's Road." The much discussed play by Josephine Hammond. The reading of the accepted essay was in conversation. Refreshments were served.

The non-fraternity men called at the Delta Gamma house, Sunday, Oct.-Nov. 31.

SATURDAY
William Fox Presents Betty Nansen in "Anna Karenina"
Tolstoi's Drama of a Woman Who Dared
"Anna Karenina" is famous to students of feminine psychology the world over. Till Count Leo Tolstoi created this wonderful character there had never been such a revelation of the complex workings of a modern woman's soul. "Anna Karenina" ranks far in advance of Dostoievsky's "War and Peace" as an exciting heroine of the modern type. She has been the test for equations essays, sermons, and speeches, and controversy has roused both about the story of "The Woman Who Dared."
ENGINEERING LECTURE

Friday morning in the Eng.

W. S. Bell delivered a very interesting ad-

and mining work in Idaho since 1908, he
d ranked six terms as mining engineer
and has a wonderful wealth of informa-
tion on mining in Idaho's backyard. At the beginning of
Mr. Bell apologized for

to make an extended address on
the grounds of lack of educational
Having been obliged to leave school when eleven years of age,
all of his book learning, he told his
audience, has been acquired by pri-

study. And this apology made the
address doubly interesting. Mr. Bell's whole
knowledge of mining would be
considered as remarkable had he had
the best of educational facilities; and

it only in the light of fact that
he is almost entirely a self-edu-
cated man.

Mr. Bell's talk discussed Idaho lead,
silver, and zinc deposits. Of course
the deposits of the Courier's mine at Mullan,
Idaho. Here are 300 acres of ore,
bearing mountain slopes, which are
at the present time in a condition holding forth
greater promise for future develop-
ment and prosperity than ever be-
fore. The activity of the leading com-
panies, the Hercules and the Driker
and Sullivan in acquiring their
own smelting plant testifies to this
statement.

Mr. Bell then went on to discuss
in detail the various minor lead and sil-

er deposits of the state.

Taking copper deposits next, he
discussed the Empire mine at Mullan,
Idaho. Here are 300 acres of ore
bearing mountain slopes, which are
at the present time in a condition holding forth
greater promise for future develop-
ment and prosperity than ever be-
fore. The activity of the leading com-
panies, the Hercules and the Driker
and Sullivan in acquiring their
own smelting plant testifies to this
statement.

Mr. Bell's talk discussed Idaho lead,
silver, and zinc deposits. Of course
the deposits of the Courier's mine at Mullan,
Idaho. Here are 300 acres of ore,
bearing mountain slopes, which are
at the present time in a condition holding forth
greater promise for future develop-
ment and prosperity than ever be-
fore. The activity of the leading com-
panies, the Hercules and the Driker
and Sullivan in acquiring their
own smelting plant testifies to this
statement.

Mr. Bell concluded by stating that
Idaho has 30,000,000 tons of copper
ore which can be worked profitably
by methods especially adapted to low-
grade ore mining, such as those em-
ployed by the Utah Copper Mining
Company.

In the gold mining field Idaho has
in view of the low-grade ore mining
deposits, she is doing recently in Arizona, a great future.
And she has not done badly
in this field in the past. Two hundred
million dollars have been taken from
Idaho streams in placer gold. Fifty
million dollars have been the contribu-
tion of lead mining.

Going on to non-metallic ores Mr.
Bell discussed in detail the phosphate
deposits of southwestern Idaho, their
extent and future development. These
deposits, in Mr. Bell's opinion, are of
greater commercial value and prom-
note greater opportunities to the mi-
ing engineers than all of Idaho other
mineral resources combined. Idaho's
phosphate field, which is the largest
and richest in the world and practically
inexhaustible, is now looked upon by
the federal government. But Mr. Bell
thinks that the policy of the admin-
istration in this instance unneces-
sary and very unjust to Idaho.
The government is robbing the young men
of the state of their rightful heritage
in thus locking up our most valuable
resources. Idaho's phosphate fields
are just as valuable as Pennsylvania's coal
fields. And in Idaho has no cost
deposits also should be al-

owed to develop these rich phosphate
fields.

Mining engineers certainly have no
right to call to gleam from their future
opportunities after hearing Mr. Bell's
address. Idaho is in need of mineral
resources as any other state in the
union and these resources are very
largely undeveloped.

The next engineering lecture will be
given by Mr. McCartney, city engineer of
Spokane, Wash. on Friday, November 13.

AGRICULTURAL NOTES

L. C. Atcher, superintendent of the
Aberdeen Experiment Station, and
Professor M. A. Carleton, head of Cer-

cial Investigations U. S. Department of
Agriculture, visited the local station
Thursday and Friday, November 4 and
5. Both were very favorably impressed
with the improvements here in the
various departments.

Professor Carleton will soon issue a
book on small grains which will be
one of the foremost books on this sub-
ject published. Mr. Carleton's theory
and complete knowledge combined with
his wide range of experience will give us a very valuable book.

Dr. A. B. Lohrer was called out
of town Wednesday to attend a dis-
nosed herd of sheep, which were suf-
fected with the infectious diseae
scrofulous scrofula.

Professor E. W. Hamilton is now
comfortably located in his new quar-
ters in the Agr. Engineering building.
He has there an office, recreation room
and plenty of shade and general
machinery space.

The Idaho Agricultural News Letter
is now being published and dis-
tributed semi-monthly under the super-
vision of the committees—Geo. W.
Graves, Geo. J. McWing, and C. W.
Colver.

From Moore, Professor of Poultry,
has issued results on some of his
feeding experiments and in his gath-
ering information concerning other
important poultry questions.

The Short Course men are to be
praised for the manner in which they
conduct their organizations. Their
literary society is one of the most
successful bodies in the school.
The annual object of this society is to
promote knowledge along literary and
parliamentary lines and consist of
voting, debating, parliamentary ex-
dua. Much praise is due their offi-
cers Geo. Hardin, President; G. A.
Corten, Vice-President, and Palmer,
Secretary-Treasurer.

Dean H. J. Edgins returns Satur-
day, November 7, from a very pleas-
ent visit to the Panama-Pacific Ex-
position.

THE SENIOR RUFF

On Saturday evening the Seniors
were treated to their public spirited ben-
efice from the annual Ruff. It lived
up to its name—the decorations and
refreshments were sufficiently
rough, even if they weren't exactly
ready. The orchestra was musical
ly good, however, making dancing de-
lightful. The crowd was a good one,
on. In spite of the ratings of the tem-
perance, who declared that the Ruff was
too near the Athletic to be a success.
They know now that their prophesies
were bound to fail. Where a dance is
involved, for the Senior RUFF was cer-
tainly a success.

service.
Our confectionery is always fresh. We
make it daily.
Dean Ch. H. Shattuck was the speaker of the day. Miss Jeanne Peterson, representing the department of plans, opened the Assembly by an interesting talk. Miss Peterson's talk was "Mental Efficiency." To be mentally efficient, she said, one must have a proper appreciation for time. "Time is one of the most priceless assets of the body and the brain. To realize the importance of its careful use, but one does not know how to use time until he has learned how. Behind all is the matter of trained minds. The mind must be efficient before the body can be efficient. We who work in the mental laboratory should strive to obtain the highest mental efficiency. Like Heaven, a disciplined mind is not easy to get. Step by step, one must get it by himself, with the assistance of others."

Dean Shattuck then asked a number of questions, all of which merit careful consideration. He particularly emphasized the need for a well-rounded study. He then went on to say that the key to success is a good plan. He said that to feel that you are making progress, you must have a definite goal. He also emphasized the importance of practice and the need for continuous study.

The subject of Dean Shattuck's talk was "Mental Efficiency." To be mentally efficient, he said, one must have a proper appreciation for time. "Time is one of the most priceless assets of the body and the brain. To realize the importance of its careful use, one must know how to use time until he has learned how. Behind all is the matter of trained minds. The mind must be efficient before the body can be efficient. We who work in the mental laboratory should strive to obtain the highest mental efficiency. He then went on to say that the key to success is a good plan. He said that to feel that you are making progress, you must have a definite goal. He also emphasized the importance of practice and the need for continuous study.

Dr. Shattuck's talk was "Mental Efficiency." To be mentally efficient, he said, one must have a proper appreciation for time. "Time is one of the most priceless assets of the body and the brain. To realize the importance of its careful use, one must know how to use time until he has learned how. Behind all is the matter of trained minds. The mind must be efficient before the body can be efficient. We who work in the mental laboratory should strive to obtain the highest mental efficiency. Like Heaven, a disciplined mind is not easy to get. Step by step, one must get it by himself, with the assistance of others."

Dr. Shattuck then asked a number of questions, all of which merit careful consideration. He particularly emphasized the need for a well-rounded study. He then went on to say that the key to success is a good plan. He said that to feel that you are making progress, you must have a definite goal. He also emphasized the importance of practice and the need for continuous study.

Barbecue at Utah

At the University of Utah, as a fitting conclusion for the decisive victory scored over Boulder, a barbecue was successfully staged on Campus field during the early hours Saturday evening. Slightly more than 300 students participated in the revels which began at 7:30 o'clock and continued until 10 o'clock. The barbecue was the fourth of its kind given in many years at the University. It was the first time a barbecue has commemorated a victory gained from the Centennial state university.

Oregon and Athletics

Recently, the University of Oregon thru a committee's suggestion, adopted some sweeping athletic changes, among them being the abolition of conference basketball. Altho she had a very mediocre team last year, nevertheless as practically the entire squad was composed of underclassmen, Ore- gon had been looking forward to a successful season.

The unrelenting attitude of the authorities at Eugene, who blasted championship hopes at one stroke, is not being particularly well received by the student body, and students are endeavoring to re-instate Oregon in the basketball world. The Oregon Emerald said last week:

"The long-expected student opposition to the faculty's abolition of basketball evoked not late Friday afternoon, when a special committee appointed by the student council and its W-O-D Monday morning circu- lated petitions calling upon the facul ty to reconsider and rescind its action of a week ago."

"The petition will be brought before the faculty at its next regular meeting and the committee says that nearly every student in college will place his signature beneath the re quest. If the faculty refuses to reconsider the ban on basketball and re-instate the game, it is intimated that the matter will be placed before the board of regents at its meeting on January 18. Copies of the petition have been sent to prominent alumni, who will at first and in a campaign among the ex-Oregon students."

Specializing in Brown

President Ellis talked. But Presi dent Butler acted. Football was ban ished from Columbia.

Since, after ten years, it is restored. This is not so bad as it seems. A university maintaining a band of high ly trained gymnasts provides a vent for the superabundant athletic spirit of the undergraduate to work itself off. The real students are left free to pursue their studies—which, after all is one of the purposes of a univer sity—Ex."

The Other Hand

William T. Foster, president of Potlatch Lumber Co., says: "Intercollegiate athletics is an American institution which provides a cost less, luxurious and excersive regime of physical training for a few select contestants, especially those who need it.—Ex."

ADDRESS OF T. P. JONES ON LOGGING TRAIN SYSTEMS

T. P. Jones, Logging Superintendent of the Potlatch Lumber Company gave the members of the Forestry Club and many other students who were inter ested in the subject a very interesting talk and showed many stereoscopic views on overhead logging systems last Friday night.

Those personnel who saw the moving pictures of Idaho last year will re member how interesting the scenes of the logging operations were and Mr. Jones coming from these opera tions and speaking directly upon this subject made it all the more entertain ing.

At the time when the Aerial Trans fer system was first put into use, Mr. Jones was confronted with a serious problem. He had a type of country which made the cost of railroad construc tion entirely too great and which was both too extensive and too large to be handled by the customary relay settings, so that he simply had to think out some other method, and the endless overhand system was the re sult.

Mr. Jones told in his talk how they were confronted with problems at every hand. As in all pioneer con struction, mistakes will happen in all parts of the work, and this system was indeed pioneer in as much as Mr. Jones was the originator of it. The supports proved to be too weak, the shoes on some supports were con structed wrong; the trolleys were too weak and had not the right shape. Even the standing line had to be replaced by a different type.

In this system a trolley supports each end of a load of logs, containing from 100 to 2000 B.M. These trolleys are single wheel and have an automatic missing head at lower end which enables two men at lower landing to trip the loads with a special designed axe. The trolley runs on a 1 1/2-inch standing line, which is supported at intervals of about 40 feet by loading support poles with shoes which all ow the trolleys to pass by the supports. Under the standing line there is an endless cable. When this end less line is placed in bend at lower part of the trolley and the chain holding the ends of the load are ad justed, an automatic lock is formed. The heavier the load the thinner the endless cable is gripped by the trolley, so that there is no danger of a load falling forward in descending a steep grade and vice versa in ascending a grade.

The braking apparatus in the case of a gravity system is placed at the rear or upper end of the tramway. It consists of an ordinary friction drum and is manipulated by two men on a double set of levers. In this case the loaded trolleys going down pulls the empty trolleys up. This means that a double line of supports must be built, but the returning lines for supports need not be built; as substantial as the main line.

Mr. Jones told the club about the "sharp shooter" and explained that when they were having trouble with the line, a load needed to be unloaded, that this was some task when some of the loads were hanging over 150 feet in the air. Billy Walla, the foreman, conceived the idea, that since he was "some" shot with the rifle, he could shoot the trigger and trip the load. After that Billy had to lose shoes and shoot as a bar to trip the line the size of a dollar, when it hung 150 feet in the air.

The manner of splitting the standing line in lengths to minimize the strain was explained in detail. In closing Mr. Jones gave an in vitation to the club to visit the opera tions of the Potlatch Lumber Company and especially to stay overnight at the Potlatch camps.

**Brief Local News**

- Beth Bolles spent the week-end in Moscow.
- Miss Phyllis House is ill at Gim- man’s hospital.
- Guy C. Calaphoua spent the week-end in Lewiston.
- Clyde P. Humphries has returned and registered in the Forestry Col- lege.
- Herbert Johnston, a former student of the University, has returned and registered.
- Misses Doris Morley and Ruth Chap- man spent the week-end with their parents in Colfax.
- At Wednesday dinner Gamma Phi Beta entertained Mrs. Trottt, Miss Stephen, Miss Toller, Miss Moore, and Mrs. Issacson.
- The members of Delta Gamma were house-sitting at dinner, Tuesday evening, in honor of Mrs. T. B. Holmen, Miss Bentley, Mrs. Clark, Mary and Elma Clarke.
- A number of the college girls were guests at the Brannon house on Sun- day afternoon. The time was pleas- antly spent in contests and games, and dainty refreshments were served.
- Jeetra. Kind, Hyde, G. Knudson, A. Knudson, Martinson, Johnston, Hum- phries, Decker, and Calaphoun went to Pullman Saturday to witness the game between W. S. C. and Montana.

**SENIOR PLAY POSTPONED**

Owing to the absence of Mr. Claude Micklewaita, who has been called to Nevada on account of his father’s death, the Senior Play, which was to have been presented November 12th, has been indefinitely postponed. For a few weeks the seniors have been en- thusiastically working upon “The Ar- rival of Kitty,” one of the best things Norman Leo Swartout has ever done. Since the letter-perfect stage has been reached in rehearsal, it will not be a difficult matter to resume the work when Mr. Micklewaita returns.

--Lady—What a handsome dog! He must be valuable.

--Vendor—Yes he is. The gentle- man who bought him offered $5 for him? I bring him back. I think he is beautiful.

**Stylish Stationery Indicates Refinement**

The use of good letter paper is always accepted as an indication of refinement. It need not be high priced, but should be well chosen.

If you select your stationery from our new and up-to-date stock you will be sure to get best quality at reasonable cost.
