**SAE Freshman Queen Reigns**

**GOLDEN FLEECER EYELET**

To determine if 8th-grade students are in a better position to cope with the stresses of the transition to high school, researchers from Kansas State University and Kansas University conducted a study. The researchers found that students who experienced a transition to high school were more likely to experience negative emotions and stress, as well as to have a lower self-esteem. The researchers suggest that schools and parents should consider strategies to help students transition to high school more effectively.
