Everybody Needs Milk
But Can the University Afford It?

By Karl McConkey

A new milk shortage has hit the University of Idaho campus, and students are concerned about the future of their milk supply. The milk situation has been worsened by a series of incidents that have led to a significant decrease in the milk available on campus. The shortage has prompted students to search for alternative sources of milk.

The milk shortage began when the university's milk supplier, Dairyland, announced a new policy of delivering milk only on Mondays and Wednesdays. This change has made it difficult for students to get milk during the week, and many have had to rely on alternative sources such as local stores and dairy stands.

Students have expressed concern about the impact of the milk shortage on their diet and nutrition. "I'm really worried about getting enough calcium and protein," said Emily Brown, a sophomore studying biology. "I really need milk to stay healthy."

The milk shortage has also affected the university's budget. The university has had to increase its spending on alternative milk sources, which has put a strain on the budget.

"We're doing our best to manage the situation," said Mary Johnson, director of the university's food services. "But it's been tough." She added that the university is exploring options for increasing its milk supply, such as negotiating with new suppliers.

The milk shortage has also raised questions about the university's ability to manage its resources. "We need to be more strategic about our spending," said John Smith, a professor of management. "We can't just keep adding to our budget without thinking about the long-term implications."
Nightline
An Answer When All Others Fail

By Don Dalton

Four years and thousands of telephone calls ago Nightline began a special evening to answer that very question: how long would a dead body last in the oven?

In an interview with Bob and Sue Shaw, authors of the book "Body Heat," and two medical examiners, the question was raised:

"What would be the best time to have an autopsy if a person were suspected of being murdered?" asked Bob Shaw.

"It really depends on the condition of the body," replied Dr. John Paul Strickland, a medical examiner. "If the body has been stored in a refrigerator, it could last up to two weeks without decay. If it's been exposed to the elements, it could last only a few days."

The authors also discussed the effects of decomposition on fingerprints and DNA evidence.

Dr. Strickland explained that fingerprints can be preserved for up to 24 hours after death, while DNA evidence can be collected for up to 72 hours.

The discussion concluded with a reminder to always call the police if you suspect a crime, as time is crucial in preserving evidence.

Bird Wants Student Input

Gwin's Focus: College Life

Gwin has seen the growth of the college student body from 10,000 in 1974 to nearly 20,000 today. This growth has brought about new challenges and opportunities for the university community.

One area of focus for Gwin is student involvement and participation. He believes that students are an important part of the decision-making process and should have a voice in shaping the future of the university.

"I want to see a more active role for students in the governance of the university," Gwin said. "I believe that students can bring a fresh perspective and a sense of urgency to important issues."

Gwin also mentioned his commitment to providing resources for student success, including improved academic programs and support services.

"I want to ensure that our students have the tools they need to succeed," he said. "Whether it's better advising, improved advising, or more opportunities for research, I want to provide the resources that our students need to reach their full potential."
What Kind of Friend

The drug bust at Oregon State University last week naturally causes a dilemma and the resulting complaints will likely be-deafening. The university administration has to appease two groups of people—students and the law. It may be a difficult task to balance the competing interests at OSU. What is the solution? 

The administration is in a difficult position. On one hand, they have to satisfy the students who want to get rid of the drug problem. On the other hand, they have to satisfy the police who want to enforce the law. What is the best way to solve this problem?

Drugs in Education

The drug problem at Oregon State University is a complex issue. The administration is faced with a dilemma of how to deal with the drug problem. They have to satisfy the students who want to get rid of the drug problem and the police who want to enforce the law. What is the best way to solve this problem?

Semesterreview: Test Your Front Page Skills

20 to 24 right—You get an "A," come down and apply for editor.
15 to 19—You’re B average, try for ASU President.
10 to 14—that’s a C, a typical faculty member. 
5 to 9—you’re getting a D. 
What do you do, study all the time?
Less than 5—that’s pretty good; we didn’t know you could read.

Comedians Don’t Make It Downtown

by John Hecht

When you’re a good for a typically underpowered (I shudder to say comical) group of students, you have a few advantages. You’re young, you’re unpolished, and you’re not afraid to say what you think. That’s good if you have a good idea, or a good subject. It’s a mixed blessing if you have both.

The main problem is that the student body is not really that interested in what you have to say. They’re too busy worrying about their own lives to pay attention to the lives of others. They’re too busy trying to get good grades to care about the world around them. They’re too busy trying to get good grades to care about the world around them.

So, you have to be careful what you say. You have to be careful what you say. You have to be careful what you say.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

I’m not saying that you have to be nice all the time. You can be nice sometimes. But you have to be careful how you say it. You have to be careful how you say it.

Hosack Ends Idaho Teaching Career

After 31 years of teaching at the U of I, Dr. Robert Hosack will deliver his last lecture on Friday, June 13.

As of June 1, the distinguished field of the U's Department of Agricultural Economics became the first victim of the long-ago-declared death of the college's agricultural extension service. The outside world, it was discovered, was much more interested in—well, actually, it was in just about anything but agriculture. Thus, the 1980-81 budget decreased by $475,000, and Hosack, a 1963 graduate of the U's Agricultural Economics program, took charge.

“Of course, we had some retirements this past year,” Hosack said. “But it’s the kind of thing that always happens in the business school. It’s a staffing question.”

The official opening of the 1975-76 competition for grants for research was attended by both the department chairman and the college dean. Hosack was appointed chairman of the department in 1973, and assumed the position of acting dean in 1975.

Hosack received a bachelor's degree in business administration and major of arts degree from the University of Idaho in 1958, and a master's degree in the same subject from the University of Washington in 1961.

Hosack is the co-author of several books of business and economics research reports, was president of the American Agricultural Economics Association in 1976, and a member of the board of directors of the American Economics Association.

Business Dean Retires

A University community member will retire at the end of this month, ending a 10-year association with the U.

Dr. Russell L. Chrysler, a former acting dean of the College of Business and Economics, will retire May 25 as professor of marketing and department chairman.

Los Angeles State College, an assisted professor of business at the University of California, Los Angeles, was appointed as business at North Delta State College. While at the University, Chrysler served as chairman of the department of business administration and managed the business administration and management department.

Chrysler is the director of marketing and management, and will continue to teach his courses in the departments of business administration and management.

Chrysler received a bachelor's degree in business and economics from the University of Idaho in 1969, and a master's degree in the same subject from the University of Washington in 1971.

Senate Resolution Asks For Acceptance of Fraternity

The ASU Senate has endorsed a resolution stating that the University of Idaho is in need of new members of the national fraternity of the American University.

The 13-1 vote on May 13 approved the resolution, which establishes that the University should accept the national fraternity of the American University. The national fraternity of the American University is composed of members of the University of Idaho who are interested in being members of the fraternity.

The resolution states that the University should accept the national fraternity of the American University because it will increase the membership of the University and provide additional opportunities for the students of the University.

Scholarship Race Begins

The official opening of the 1975-76 competition for grants for research was attended by both the department chairman and the college dean. Hosack was appointed chairman of the department in 1973, and assumed the position of acting dean in 1975.

Hosack received a bachelor's degree in business administration and major of arts degree from the University of Idaho in 1958, and a master's degree in the same subject from the University of Washington in 1961.

Hosack is the co-author of several books of business and economics research reports, was president of the American Agricultural Economics Association in 1976, and a member of the board of directors of the American Economics Association.

Job Opportunities

Details on job listed below are available at the Career Planning and Placement Center, Lounge Area, faculty office building.

SUMMER EMPLOYMENT

Biology majors to help with biocorrosion research in Cesar Llaca, Idaho.

Economics, Sociology, Chemistry, Physics, Architecture, Geology, Plant Pathology, and Civil Engineering majors for work with Montana State University, Bozeman, Montana.

PERMANENT EMPLOYMENT

BS and MS Electrical Engineering students and MS Math majors for positions with General Dynamics, California.

Architects and Landscape Planners for Lawrence Livermore Labs in Livermore, California.

Information Specialist II and technical writing positions which require a master's degree in English, and a master's degree in Business.

Thank You—

To the University of Idaho, The BILLDEN D say thanks for your patronage this past term. We hope that by our continuing efforts to keep the Den a clean, attractive and fun establishment, we will have another success. To the graduates, thank you and good luck. As a token of our appreciation, Thursday, May 16th, mugs will be 25 cents and pitchers 1.00 all day.

Hosack flips his lid in his usual lecture style. "Since 1973, the University of Idaho has been known for its impressive Hockey program," he said. "And now we're going to get new, better, more modern facilities for our Hockey team." He said that the new facilities would include a new arena, with seating for 10,000 fans, a new parking lot, and a new concessions area.

"With these new facilities," Hosack said, "we'll be able to attract more fans to our games, and we'll be able to get more money for our team." He said that the University was planning to start a new campaign to raise money for the new facilities, and that the public was encouraged to contribute.

Hosack said that the University would also be offering new academic programs in the future, including a new program in business administration, and a new program in computer science.

"We've been working on these programs for some time," Hosack said, "and we're excited about getting them started." He said that the new programs would provide new opportunities for students, and that the University was planning to start them as soon as possible.

Hosack also said that the University was planning to offer more undergraduate and graduate courses in the future, and that these courses would be available to both full-time and part-time students.

"We're working hard to provide the best possible education for our students," Hosack said, "and we're excited about the new programs and courses that we're planning to offer." He said that the University was committed to providing a high-quality education for all of its students, and that it was working hard to ensure that this would happen.

"We're looking forward to a great future," Hosack said, "and we're excited about the opportunities that the future will bring." He said that the University was looking forward to working with the students, the faculty, and the administration to make the University the best possible place to be.
