Vetoes: VP fingers KOUI

By Douglas Jones

In last minute action before leaving campus, the ASUI Senate budgeted an extra $15,000 for student hike by a recent hike in student fees. In its April meeting, the UI Board of Regents approved a $10 per semester hike in ASUI activity fees, raising the fee to a new total of $31.25 per student per semester. The student officials sought to budget the new monies into the 1986 fiscal year budget, which starts July 1.

Since the school year was over when clearance came from U1 Budget Office to appropriate the funds, President Jane Provance spoke with the ASUI sen.ators to come in during and after finals to vote on them. After receiving votes from 10 of the current senators, the votes were tallied on the various bills and the additional student fee monies. All eight bills passed, but ASUI Vice-President Richard Webb vetoed three of them while acting as president, due to Provance's absence from campus.

The most controversial issue was the student fee increase with a vote of 12 to 1 to raise the salaries of KOUI-FM's management. The bill which passed 5-3 with two abstentions but was vetoed by Webb. The bill provided for the raising the station manager's salary from $22,000 to $30,000 a year is $150. It would have also raised both the program director and chief engineer's salaries from $50 to $75 per pay period and would increase the director salary to $80 per pay period.

Regents endorse new reciprocity agreement

By Lewie Day

The UI Board of Regents (aka State Board of Education) voted May 16 to approve a new reciprocity agreement with the state of Washington, hearing a report on the legislative committee's study of the state education department, and discussing the relationship of the UI core curriculum to courses offered at other Idaho colleges and universities.

The May meeting also saw a transition of leadership, as Robert Montgomery handed the president's gavel over to Diane Bilyeu. Bilyeu was elected president by unanimous consent at the Board's April meeting. The Idaho-Washington Reciprocity Agreement approved by the Regents is similar to the one which recently expired; the other substantial change is a decrease in the number of seats allotted.

Bob Gittins plays musical deans with positions

Dean of the UI Graduate School, Art Gittins has been named associate vice president for research by UI President Jane Provance. Gittins will continue to serve as graduate school dean. He has held the position for a sabbatical next year but has agreed to serve as associate vice president for research while a search for a permanent associate vice president is completed. The revised position title for Gittins will take effect July 1, with Provance's approval on the budget year on July 1. Gittins will be succeeded by Michael Westfall the following year.

Gibb said the new title will help increase the visibility of the UI although it would mean the assistant vice president for research. It is a matter of visibility. Our research that should somewhat improve our chances of getting more research money.

John R. Hendee, assistant director of the USDA Forest Service Southeastern Forest Experiment Station in Asheville, North Carolina, has been appointed the new dean of the College of Forestry, Wildlife and Range Sciences. President Richard D. Gibb, announced Hendee's appointment. Hendee has been a research assistant professor consultant, handling Forest Service assignments on two ranger districts of the Susan National Forests in Oregon for three years, and served 11 years with recreation and forest management. He holds a bachelor's and master's degree in psychology from UI. Hendee also holds a 15 year specialist in school psychology and a Ph.D. in special education with emphasis on learning disabilities and emotional disturbances from the University of Washington.

Hendee's teaching and administrative experience includes faculty positions at The University of Washington and U1; practicing school psychologist in Washington public schools; principal of the National Consortium on Adaptive Performance Evaluation, a research group of personnel from the University of Idaho, Oregon, Washington, Woenos and Morehead State University.

Mon., June 10, 1985, No. 6
Regents grant crucial funding

Areas earmarked by the UI for critical program needs expenditures in fiscal year 1986 include the colleges of Business and Engineering personnel; state-wide access to UI primary programs and core curriculum enhancement.

The UI was allocated $1,278,185 in state critical program needs by the Board of Regents at its May meeting.

The UI allocation, out of $3,033,622 dedicated by the Regents for critical needs at the state's universities and college, was channeled by the UI to programs and problem areas recommended for improvement in the accreditation report of the Northwest Association of Schools and Colleges.

Critical program support was provided by the Regents in an attempt to shore up existing programs which have been singled out in internal study and/or accreditation reports as needing special assistance. The UI, in compiling its list of needs, cited the recent NWASC report as a guide for preparing its list of needs.

To address NWASC concerns in the UI business and engineering curriculums, the school is adding new faculty in business, engineering, computer science and other areas. A total of 6.43 new positions will be funded next year.

In its critical program, the university administration cited pressure from accrediting agencies in making its critical needs decisions. "The FY 1986...plan addresses a significant number of the problem areas identified in the several recent accreditation reports," said the report.

Other staff increases will be in the area of support staff, instructional media, psychology, Spanish and communications. In addition, the UI plans to spend $143,226 for increases to the university's pool of instructional assistants. Miscellaneous sums have been earmarked for support staff at the UI's Coeur d'Alene and Boise centers and for operating expenditures.

Regents, from page 1

into separate units for public schools and higher education. The legislative committee has members from both houses of the legislature. Hay serves as co-chair from the house, the senate co-chair is Sen. Terry Sverdsten (R-Idaho).

Hay, a former Regent, told the Board her committee will conduct hearings to investigate possible changes in the state education system. Hay said the committee will be the first to study the system since the investigation by an Idaho Association of Commerce and Industry committee several years ago. According to Hay, higher education concerns which will be addressed by the committee include accreditation, the role of the executive director, establishment of one state university with branch campuses, and the establishment of a chancellor-led university system.

Regents were supportive of Hay's goals, and discussed ways of helping the committee. Robert Montgomery said, "The Board could have been more forceful" in its interpretation and action on the JAC recommendations. Montgomery added that there is a strong possibility that the Board will continue financial support problems, and said changes may need to be made in the system. "We've got a very expensive system," Montgomery said, adding the Board needs to look at changes in the way the education system is funded and administered. "Can we," he asked, "do what we're doing more efficiently?" He said the Board needs to do its own research into the problems.

In other matters relating to the UI, the Board approved the lease for the new location of the Prichard Gallery in downtown Moscow. The gallery's lease in property owned by First Security Bank was not renewed due to the bank's expansion plans. The gallery will be relocated to the former Cox and Nelson property at the corner of Main and Fifth streets. The new location will provide a location for the gallery for the next five years (with an option for an additional five years). In its afternoon session the Board discussed a statewide in- institutional core curriculum amendment.

Regent's conference plan.

Based on the UI core curriculum, the agreement establishes courses offered by the state's colleges and universities including state public institutions, the two junior colleges and three private institutions can be declared equivalent to similar courses in the UI core. The decision to establish a schedule of course equivalences was the Board's reaction to a request by the Owen Cargol, North Idaho College dean of instruction. Cargol's proposal for a unified "Idaho Core" was rejected by the regents, but they approved the equivalency schedule. The schedule names all equivalent courses, and will facilitate the transfer of credit for students who changes schools. Cargol, dissatisfied at the Board's refusal to approve a statewide core, continued to press for such a program. Linda Statley, the Board's chief academic officer, asked, "Should institutions with different roles and missions be required" to have the same core? Cargol said that while AA and AS as a general education course with the AA/AS degrees as equivalent to the UI core, necessitating more general education coursework for some NIC transfers.

The academic vice presidents of the four state schools were asked for their reactions to Cargol's proposal; all four opposed the plan.

In other business the Regents approved the UI critical program budgets of $143,226 and $813,511 which were requested by the AA/AS programs.

LCSC claims limits were not explained

The loss by Lewis-Clark State College of five positions (tuition waivers) in the Idaho-Washington reciprocity program was the subject of much discussion. Officials of the two state universities who were laid off as part of the budget cuts said, because of the way LCSC handled the waivers it had in the 1984-85 year.

LCSC officials recently approved LCSC's critical program budget of $813,511 and $521,278; the UI agreed to the budget.

According to board figures the

See LCSC, page 11.
Cockroaches problem for tenants and physical plant

By Chem Doris

A complaint by UI student Richard Law created a furor several weeks ago over cockroaches in the university-owned Park Village Apartments on Line Street. He said his gripe wasn't that housing hadn't tried to rectify the problem, but that he has to deal with the cockroaches at all.

There are cockroaches all over town, according to Don Surs, assistant director of family housing on campus. But they have been particularly visible in the P.V.A. housing and the physical plant have been trying to control the problem.

The cockroach is one of the oldest living insects and has been around since prehistoric times. They're a tough one to kill said Surs. While the mostly nocturnal creature is usually more common in warmer climates, Surs said they can live anywhere. They stow away in the luggage of students who move here from the Southern United States and from some foreign countries.

The pest status of the cockroach is derived mainly from an aesthetic abhorrence of what is commonly regarded as a loathsome intruder, according to P.B. Cornwell, author of "The Cockroach" a two-volume study written in 1976 "for the pest control industry and ... all others who have the responsibility for hygiene and eradicating cockroaches from buildings."

The cockroaches' status as pests is increased by the fact that they are usually associated with poor standards of hygiene. For the majority of people, cockroaches are psychologically disturbing and to some can cause considerable mental stress, Cornwell wrote.

Cockroaches have existed on earth about one hundred times longer than man and there are at least 3,500 known species mostly of tropical origin. Less than 1 percent of these known forms are "domesticated pests," causing a problem for man.

According to Surs the problem in the P.V.A. has become more developed in the last couple of years. In years past, the university used a very strong pesticide that has since been taken off the market. Surs could not recall exactly what that pesticide was.

In more recent times, the university had been treating each apartment as the tenant complained, but they found that the insects simply moved to another apartment until it was safe to return. Surs suspects the cockroaches travel through the heating lines.

Last year the physical plant used a bomb-type fumigant device for entire buildings. It helped but did not eradicate the problem, Surs said. The roaches simply line up on the sidewalk and wait for the smoke to clear.

Desperate to get rid of the pests, housing hired a consultant from a private business in Lewiston called "Pest Control." On the recommendation of the consultant, the physical plant evacuated and fumigated the buildings last week with Vapona, a brand of dichlorvos.

Dichlorvos is an organophosphorous insecticide best known in "slow-release" products for fly control. It combines high insecticidal potency at relatively low concentrations, especially against flying insects, with very rapid action and high volatility, according to Cornell's book.

John Acuff, UI grounds chemical equipment operator, used a micro-gen U.L.V. generator to put out a fine particle mist.

"The idea is to use less pesticide of the proper particle size for maximum effectiveness," Acuff said. But according to Cornwell, "the elaborate equipment developed for applications by U.L.V. (ultra low volume) in no way overcomes the inadequacies of mist for cockroach control. It may help to 'sell' the service for See Spraying, page 9

Funigester Larry Acuff stows his spray (cockroach) in a married student apartment.

POHMONS PHOTO BY DEB GIBERTSON
Fall is too late, KUOI can’t wait

Revitalization of any program requires infusion of new management, new ideas, and once those are in place, new money. The area of student government operations is no different. The possibility of the signal; news programming, or the shortage of it; the type of music played; and not broadcasting from the field. Each of these “preoccupying” factors is what we have been faced with.

Since 1977, a device which would improve the signal has been attaining the title of the KUOI. The “third band” on the antenna will alter the shape of the broadcast signal, and thus increase the “effective radiated power” enough that the station could be clearly received by all students with respect to its elements. The new antenna is “found” the third band and is moving in to install.

With the support of then-station manager Chan Davis, Meyer started up the first KUOI news service in two years. Last fall he used as much volunteer help as he could muster. This spring he managed to scrape out money to pay the technical personnel. News — global, regional and local — did get on the air. Money was raised and we all tried to get on the air.

The library is estimated to be about 15,000 volumes. It reflects the broad range of tastes and interests of the students who have worked here over the years. KUOI has often helped break new groups and artists, long before they are played on commercial stations.

In order to effectively use this library, and better respond to the listeners’ requests, the jocks need to know what is available. At the minimum, a computer on the main frame is needed. Better still, the purchase of a station computer would make it possible to catalogue and inventory this valuable collection better.

The annual Renaissance Fair fell the same weekend as finals. By squeezing its telephone budget, KUOI broadcast two days of music from East City Park. For many of us who were inside studying, this was an extremely welcome service.

Most major equipment in the studio is ten years old, and needs immediate and remedial maintenance, if not replacement. The new engineer is proceeding to ensure the station’s compliance with the FCC’s minimum in terms of the equipment and any level of spare parts on hand.

How many thirty- and forty-four weeks can the students expect to get from a manager who is getting only $75 every pay period for his efforts. And how much work can be expected from his staff, who get no work at all?

Truax said that he feels there will be “time in the fall” to appropriate more money for the station. He said he wants to see efforts from the station to improve before he can consider a wage increase.

We disagree with both statements.

There is an immediate need for upgrading our student radio station. The staff has the time now, and it is clear that they have already begun the program improvements that Truax felt needed.

The top ASU officials are in Moscow this summer. They should sit down with Meyer and his team and put together a re-budgeting proposal which can be accepted by the ASU. This proposal can then be conducted. This should be done before the new fiscal year starts.

Neither staff nor listeners are satisfied with the status quo. The necessary money for improvements is not available, but must be spent on an immediate basis in order to have a salary upgrade as the first step, closely followed by money to up-grade support operations.

John Hecht

An Idaho (Aronaut) Summer

Welcome to the summer University of Idaho, a very special place and time. Once the May rains (which came in June this year) have gone you will enjoy your stay. We know how nice Moscow can be, that’s why we are here.

This copy of the Idaho Aronaut represents the first time in its 87-year history it has printed a regularly-scheduled summer paper. We plan to fill the void left by the demise of the Summertime, a worthy, a victim of budget cuts, was published by the School of Communication.

The Aronaut completed the school-year with the best income record in its history. There was enough unspent money that the ASU student government was able to make publishing seven issues of a summer paper. It is an experiment, but we have hopes that it will work out and can be made a permanent service for the students and the university community.

The logo which runs on the front page is called a “flag.” The new design incorporates several elements. The historical and official name of this paper, the Idaho Aronaut, has not been used for three years. We have returned to this name, first used in the spring of 1928.

The type face is “Bembo,” a more traditional design with serifs (the serifs on the end of each letter). It has grace and strength.

The design in the middle of the “G” is the earliest variation of the University of Idaho seal which could be found. I was greatly assisted in my research by the Special Collections staff in the library. The original design was adopted by the Board of Regents in 1904, but the minutes of that meeting did not include a copy of the seal. Its whereabouts are unknown.

The first student newspaper, the monthly University Aronaut was published in 1896. Volume numbers were based on a one-year publication cycle. In 1920, what should have been Volume 22, remained 21. Twenty years later someone noticed the incorrect sequence and attempted to correct the matter.

Unfortunately this correction put the paper's numbering since it has dallied back and forth. With retitling, I am hoping that my correction will be the last one necessary.

I am fortunate to have been chosen editor for the upcoming semester, and be given the opportunity to learn new writing techniques. Very soon we hope to have a "network" device which will tie together our new PCs as one unit. This will permit us to do the bulk of our editing and coding electronically. Hopefully, this will reduce our paper-shuffling and permit us to concentrate on our content. That's what computers are supposed to be for. We shall see.

I am also fortunate to have the assistance of an experienced staff: The "mountain" below includes the names of three former editors. Writers Alex Voosman has had the lease experience, only one semester as an intern from Moscow High School, a first-time venture which worked well and one we hope to continue. Unfortunately for the Aronaut, he will be going to college next fall elsewhere.

In a break with my traditionalist attitudes, I am assuming the final assignment of the semester staff photo, and instead am running individual pictures over the next two issues. This is to permit you to be able to spot our writers and photographers around campus. It will give you a chance to compliment or chastise them on their work. We are still anonymous, and have the additional responsibility as journalists to give you our best. Let us know how we are doing.

One final note. On page 11, you will find the comic strip "Macklin." This long-running (almost) adventure satire, written and drawn by Mike Mundt, returns to the Aronaut after a one-year absence. It has been carried on-and-off since 1973. It’s been demanded and dammed, but I am honored to carry it in my first issue.

The Aronaut will accept letters to the editor until noon on the day prior to publication. They must be typed, double spaced, signed in ink and must include the name, address, phone number and student I.D., or driver’s license number of the author. Letters may be edited for length, clarity and mechanical mistakes. Letters should be limited to 250 words. The Aronaut reserves a right to the letters that are libellous or in bad taste. Letters will be published as they are received.

The Aronaut is published, within the bounds of the University of Idaho, by students under the direction of the student government. Publication is under the auspices of the Communications Board of the University of Idaho. The Editor-in-Chief is Steven M. Beasley. Any questions concerning the publication of the Aronaut should be directed to the Editor-in-Chief or to the student government. The publisher reserves the right to withhold publication in any or all cases. The publisher is not responsible for the views or opinions expressed in the columns of the Aronaut. The Aronaut is printed by the University of Idaho Press, and is available at offices of the university. The Aronaut is printed nearly every issue except for breaks during winter holidays and summer.

The Aronaut is available as a subscription at $15.00 per year. All payments are made payable to the University of Idaho Press. Address all inquiries to the University of Idaho Press, 211 Science Hall, Moscow, Idaho 83843.
Greg Klimmer, writer, is a three-semester veteran, the last as sports editor. A senior in journalism, he fears that he will have to start paying his own way into athletic events when he completes his student career next December.

Lewis Day, co-assistant editor, will complete his degree in history this summer. He served as Argonaut editor last spring. After the trauma of graduation, he will attend the Graduate Theological Union in Berkeley.

Suzanne Gore, advertising manager, is a former Argonaut editor (Spring 1982). She has been Ad Manager four semesters, and will continue to do so until she graduates in May 1986 with a degree in advertising.

Douglas S. Jones, writer, is a super-senior in economics and political science. He has found respectability at the Argonaut after a one-year term on the student senate and after surviving a session as ASUI lobbyist at the Idaho Legislature.

Phil Lauro, Phozone photographer, is a forestry, wildlife and recreation major, who wants his pictures to speak for him.

John Hecht, editor, is a senior in telecommunications and political science. He received one degree in 1980, and returned to the UI for additional studies two years ago. He will also be editor for the Fall 1985 Argonaut.

'85 Special Olympics

'LET ME WIN... BUT IF I CANNOT WIN... LET ME BE BRAVE IN THE ATTEMPT.'

With those words of the Special Olympic creed from Seattle Seahawks Sam Merriman, the 1985 Idaho Summer Special Olympics got underway here in Moscow May 30 through June 2.

Over 600 athletes from Idaho as well as teams from Colville, WA, Nyssa and Ontario, Oregon converged on Moscow for the 17th annual Special Olympics games.

Governor John Evans proclaimed the event as "KEEP THE SPIRIT ALIVE IN '85" week, the game's official motto.

Ages of the athletes are 6 and up and are set for the mentally retarded although physically handicapped athletes are accepted.

The Olympics opened in grand style with the opening ceremonies in the ASUI-Kibbie Dome, complete with Scottish bagpipers, balloons, beauty queens and even Mickey Mouse and Goofy showed up for the festivities.

The torch relay of Moscow Olympians David Yen, Annie Connolly and Toby Schultz lit the Olympic torch to open the games.

Planning for the four day event started last August with the seven area coaches having to come up with a figure of how many athletes they would be bringing so that housing and meals could be planned for.

"Each team provides its own money to come from all over the state, us ally from Walhalla," Rich Spluthorp here.

Activities were held for the athletes. Along with Mickey, Goofy and various other clowns, a dance and variety show were held for the Olympians' enjoyment.

Along with the athletes, it was the 400 odd volunteers who made the 1985 Olympics a success.

Volunteers ranged from housing and meals to timers, greeters and huggers.

"You can't be the support on the inside," Nishi Holland said. "It's all..."
Volunteers ranged from housing and meals to timers, greeters and huggers. 
"You can't be the support to just the people in the state," said Schultz. 
"The community support was great." 
Schultz said it was contagious how people from town showed up and helped out in any way they could. Moscow and the entire state should be proud of their efforts. 
The list of volunteers is too long to go into each and everyone, but the Olympic committee wanted to give their deepest regards to all who helped out. 
The 1985 Special Olympics was summed up by a 13 year old special athlete named Ricky. With a medal dangling proudly from his neck, the young Olympian replied of his weekend. "It was great, I had fun." 
It was fun for everyone, Ricky.

Men take 2nd, women 5th in championships

By Greg Kilmer

University of Idaho men's track coach Mike Keller's prediction that his squad had a chance to grab their fourth Big Sky title in five years was definitely in cheek. "I told the press beforehand that we were possibly in the top three, but what I told the team was a little different," Keller said. "I told the kids that on paper, we could win it. Everyone just had to come through for us."

Keller's prediction was almost right as the Vandals fell just three points short of Northern Arizona's 129 for the title. And with a little help from meet officials, he might have been right on the nose.

In the 1,500 meter final, the University of Montana coach filed a protest after the race stating that the NAU runner had impeded his runner during the race.

Meet officials reviewed the race and determined the protest was correct. The officials ruled that the two runners would switch finishing positions.

According to NCAA regulations, the NAU runner should have been automatically disqualified.

"It was a little upsetting but we were okay with it two weeks later when it was too late," Keller said."

As was the case all year, it was the sprinters that brought the Vandals the majority of their 126 points. The Idaho sprinters swept the 100, 200 and 400 meter dashes as well as taking the 400 meter relay.

Vanadals Dave Smith took the 100 with a wind aided 10.3. While Chris Stokes took the 200. Wanless finished third and fourth for Idaho in 10.43 and 10.46 respectively.

Idaho owned the 200 meter dash as Idaho took the first three slots for the event. Smith took his second win with a 20.70 finish followed by Sam Koduah 21.14 and Everett Wulfen 21.14.

Idaho's Sam Koduah brought another Vandal victory in the 400 meter with a 46.02 timing. The Idaho 400 relay team of Smith, Wanless, Stokes and Koduah broke their own conference record of 40.24 by taking the relay in 39.61. Idaho also took honors in the 1600 relay with a time of 3:10.97.

In the field events, Tim Taylor won the shot put with a toss of 60-feet-6 with Dan Martin finishing third with a 56-0 toss. Vandal pole vaulter Steve Out 15-4 effort earned himself a fourth place finish.

Behind NAU and Idaho in final team standings were Boise State (106), Idaho State (80), Montana (77), Montana State (52), Weber State (44) and Reno (10).

Along with receiving most outstanding co-athletes with UI's sticker runner Jeff Jaynes, Smith qualified for the NCAA championships in the 100, 200 and 400 meter relay. Joining Smith at the NCAAs in Austin, Texas was Koduah, who qualified in the 400 meters. The NCAAA started well for the Vandals as Smith qualified for the finals in the 200 with the sixth fastest time in the prelims with a best ever 20.39 wind aided effort.

The 400 meter relay also qualified for the finals with Idaho and Idaho school and Big Sky record 39.48. The time was the eighth fastest and made the Idaho team the only West coast squad to qualify for the finals.

Although setting a new school and Big Sky record in the 400 meters, Koduah failed to qualify with his 45.58 mark.

"The times were exceptional last this year," Keller said. "Sam's (Koduah) time would have put him fourth in last year's finals in Eugene."

Things got worse for the Idaho squad, as Smith pulled a leg muscle and was forced to scratch from the 100 premiss as well as the 200 final and the entire team in the 400 relay. "It was discouraging that we didn't make the finals because of the injury, especially at this time of year," Keller said. "But we got Idaho some recognition. We were the eighth fastest team in the nation and excluding Boise, we were the fastest west of the Mississippi."

The Idaho women did not fare as well as the men as they were edged fifth in the Mountain West Athletic championships held in Boise.

First place finishers for the Idaho women were freshman Kristen Jensen in the long jump and Sherri Schoenborn in the javelin. Jensen led a 1-4-6 finish for Wilson in the 100-10.45 effort in the long jump while Schoenborn's 175.5 throw in the javelin broke the old conference mark of 168-5 and qualified her for nationals in Austin. However she did not qualify for the finals of the Texas meet.

Boise State took home the team title for the second straight year with 178 points.

Following Boise were Montana (107), Weber State (94), Montana State (82) and Idaho (72).
Students to embark on 'Quest'
By Carolyn Beasley

The second annual summer enrichment program for gifted and talented Idaho students will begin June 16 and end on June 28.

During this time students grades 6-9 will attend college-like classes. The eligibility requirements have changed from last year's limit of 6-7 grades. This has increased enrollment from 33 pupils last year to approximately 65 this year.

Classes have specific goals or "Quests" designed to bring together creative students who can work together in an atmosphere in which they can discover new experiences and add to each other's thinking and creativity. Courses will also expose the students to various levels of academic challenges not commonly found in their schools.

Students wishing to attend the program had to go through a process of nomination/acceptance, which includes interviews, achievement tests or a general measure of ability of the 98th percentile or higher and evidence of outstanding ability or creativity or specific aptitude and interest.

They also had to provide documented examples of recognized experts as to the student's ability in producing a product and a letter from the student stating why he wishes to participate in "Idaho Quests."

The cost of the two-week program is $500. This covers food, lodging, extra instructional materials and an honorarium of $500 for the instructors. The program includes, however, not enough money to even start to cover the amount of time and energy the instructors will put forth into the program, according to Cathy Carrow, program coordinator.

As of yet there are no available scholarships for those students who want to participate in the course. Carrow said, "We anticipate donations from their communities, and we have received donations from different businesses," she said. "We would like to have scholarships for all who want to participate in the course.

This year the courses offered are basically science oriented. "This is because that is where we got the majority of instructors," Carrow said.

The students will choose three courses out of approximately 17 offered for their curriculum. This is because certain courses are given at one time and the students' day can only include three courses.

Subjects range from Aquatic Animal Medicine to Psychology: A quest for Understanding, from A Mars Habitat, the possibility of a settlement on Mars for a good leader to Teens in the Legal System. Even Self Quest is offered.

Students will have breakfast at 7 a.m., a panel meeting at 8, then Quest will be at 9:30 followed by Quest II until noon then lunch. At 1 p.m. until 2:30 p.m. will be Quest III, followed by Free time then will be a small group counseling directed by Tom Fairchild, a counselor, then dinner at 5:30 p.m. Free time will last until 7:30 when the groups will meet together for a group recreation, at 9:30 will be the evening snack and bed check will be at 11 p.m.

Those participating in the program will be housed in the Trepulius Tower Dormitory on the campus. There will be 10 counselors for the group.

Spraying, from page 2

cockroach control but in no way improves the performance of the insecticide used. In fact, most of the insecticide is put where it is not needed. Commission added.

Acuff said they have tried many different pesticides in the P.V.A. including Durban and found two approaches with little success. This year Acuff is taking three separate steps.

First, he dusts directly into the voids and inconspicuous places in the apartments. Acuff said these particular apartments were especially conducive to cockroach survival simply by their structure. "Housing introduced holes into key hiding places and I can spray the dust directly into them," he said.

Also, residual material is placed in the cracks and crevices where the cockroaches frequent. "The residual material should give four to six weeks control," Acuff said. That should also have some effect on the eggs, he added.

Finally, the U.L.V. generated fog should kill any surviving cockroaches. "I will really be disappointed if this doesn't work," he said.

Suras said the fog gets so thick that it sets off the smoke alarms. The physical plant plans to fog the apartments one more time in August before the students come back for the fall semester. They are also planning to fog the Wallace Complex just as a precaution," he said.
Cruise-Captain Steve Weber will take passengers up the Snake River Gorge with a beachside picnic and a tour of a goldmine Sunday, July 14 and Saturday, July 20. Call the Summer School Recreation Office for more details.

Lake Coeur d'Alene Cruise-Bring a sack lunch, this is an all-day event every Sunday from the Public dock in downtown Coeur d'Alene. Leaves at 11:30 a.m. and returns at 6 p.m. Tickets may be purchased in Coeur d'Alene at the city boat dock beginning about 1 a.m.

A breath of fresh music

89.3

There are still some openings for volunteer summer disc jockeys (no experience necessary). Applications are available on the third floor of the S.U.B.
LCSC, from page 2
Leviston school awarded 12 (of 20 allocated) waivers to students enrolled in vocational and technical studies. According to the agreement with the state of Washington, the tuition waivers are to be given primarily for undergraduate study leading to the baccalaureate degree.

Officials in Washington's Council for Postsecondary Education demanded the reduction in LCSC's allocation because of the large number of students in non-baccalaureate fields of study. Some seats are awarded to graduate students, but the Washington officials insisted vocational and technical studies are not covered in the agreement's intent. The result was an agreement between the CPE and Idaho officials to reduce LCSC's allocation by five seats.

Officials at LCSC contend they were never told of restrictions on the waivers, and said they have abided by the regulations with which they were familiar. LCSC President Lee Vickers said the college will follow any requirements laid down by the CPE or other agencies.

UI parking regs in force all year
UI parking regulations are enforced throughout the year. Permits must be used to park on campus lots from 7 a.m. until 5 p.m., Monday through Friday. No permits are required on weekends. The UI Information Center is open from 7 a.m. until 5 p.m. for the issuance of Visitor Passes. The Info Center is located at the corner of Third and Line Streets (between the Physical Plant and Modernway).

Visitor passes are issued to persons who are not currently enrolled students or employees of the UI. They allow parking in both Blue and Yellow lots.

Anyone can purchase parking permits, which are available from the Controller's Office in the Administration Annex building. The license number of the vehicle to be registered must be known.

Blue permits, for the permitted lots, cost $3 for the summer. Yellow permits, which entitle holders to park in all lots, cost $10.

The Pedestrian Core of the campus is closed for traffic, except with a special permit, also available from the Information Center. The Moscow Police Department issues citations for violations.

Any car parked in a designated Handicapped parking zone, and not displaying an appropriate pass or license plate, will be towed and impounded by the M.P.D.

Washington, they asked Linda Staley, Board chair academic office. To negotiate with the CPE to restore the LCSC cuts, or to have the five slots allocated to a common pool.

Fat Tuesday: fat check
By Chas Doris
Mardi Gras was the most successful ever this year as far as raising money for the College of Art and Architecture was concerned. Mardi Gras board members presented a $1,000 check to the college last month. The money, the largest amount raised in Mardi Gras events, is a service for the university community. Ads are charged at the rate of 15 cents per word, minimum of 15 words, for the first insertion, and 12 cents per word for each subsequent consecutive insertion of the same ad. The deadline for Argonaut Classifieds is noon on the day prior to publication (generally noon Wednesday). All classified ads are payable in advance. For further information call 885-8377 during normal summer business hours.
